VOLVME CXXXII

JANI.JVNE 1927

THE BVILDER

AN : ILLUSTRATED : WEEKLY JOURNAL : FOR : THE : ARCHITECT : AND : CONSTRUCTOR.

"EVERY man's proper mansion-house, and home, being the theater of his hospitality, the seate of selfe-fruition, the comfortablest part of his own life, the noblest of his sonne's inheritance, a kind of private princedome, nay, to the possessors thereof, an epitome of the whole world, may well deserve, by these attributes, according to the degree of the master, to be decently and delightfully adorned." - - - - - - - -

"Architecture can want no commendation, where there are noble men, or noble mindes."

—SIR HENRY WOTTON.

"OUR English word TO BUILD is the Anglo-Saxon Bȳlðan, to confirm, to establish, to make firm and sure and fast, to consolidate, to strengthen; and is applicable to all other things as well as to dwelling-places."—DIVERSIONS OF PURLEY. - - - - -

"ALWAYS be ready to speak your mind, and a base man will avoid you."—WILLIAM BLAKE. - -

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXII.—No. 4379. JANUARY 7, 1927.

"TASTELESS BUILDERS"

IT is good to see Mr. St. John Ervine turning his keen critical mind to the subject of taste in building. Under this title he discusses the subject in a recent article in *The Daily Mail*. In a literary age, which will be remembered for the number of masters of the perfect essay, we have often wondered why the subject of architecture is so seldom referred to. We realise that the true flavour of the essay is not to be found in an attack upon ugliness—a subject more suitable for the pamphlet—but it is to be found in the presentation of a number of human weaknesses and follies which surround the great problem of building a home. It may be, of course, that we see the problem like the shoemaker who considers "there's nothing like leather"; but even so, we feel that a stronger case could be made for teaching the public to avoid an ugly house than in instructing it in the one picture not to miss in the Uffizzi Gallery. If the analogy is not pleasing, we simply add that the daily appeals for the protection of Rural England come from a people which does not know what is wrong. It is merely aware of a danger and is trying to hide from it.

Mr. St. John Ervine confirms the burden of our recent leader on ugliness when he says he finds himself wondering why it is that "the more beautiful a place is the more determined the builder seems to be to defile it with his hideous houses." To put it otherwise, we would say that ugly houses are ugly wherever they are. They become more noticeable (and finally a nuisance) when they multiply and destroy natural beauty. Unlike the perfect gentleman who puts more into life than he takes out of it, these houses destroy beauty and replace it with ugliness. It is difficult to supply adequate reasons why the menace of the ugly house has become so acute in recent years. Ugly houses there were in plenty in pre-war days, but post-war activity in house-building, dearer costs, and the increased areas prescribed for building purposes have no doubt each contributed to the present discontent. No longer can we fall back on the excuse for the baby, that it was only a little one. In the evolution of our social state we have a failing in that we avoid a subject until it has developed into a positive nuisance. In fact, a recognised public nuisance frequently has been the necessary prelude to many of our social developments. The menace to the countryside has been obvious to some people for many years; it has now become obvious to everyone.

At the moment, it is evident that the march of the builder means to most people the destruction of the country. "Every wood and every stream, one may say every hedge-row in the country is part of its best wealth, and not one should be destroyed except at the bidding of real necessity. . . . Wherever there is a town, or wherever there is sea coast, the destruction of the country is proceeding with terrible rapidity." This we quote from the *Times*. Clearly, house-building has reached the stage of being classed by some as a particularly noxious form of epidemic. There is a touch of grim humour in the situation. We have tried a variety of inoculations to stimulate this epidemic of house-building, and the results are disturbing. Something has gone wrong with the medical supervision, and the disfiguring disease threatens to get out of hand. Only here and there do we find any reference to the cause of the disease itself—that the problem of the ugly house is an architectural problem which ought to be solved. Consequently, the immediate remedy, apparently, is to seek shelter by preserving extensive areas of land from building development. Unfortunately, those who seek to avoid the danger by running away from it have not yet realised that they are throwing open the gates to the enemy. Just as one group is convinced that the countryside is ruined, another is equally convinced that the political success of the country is assured if urban congestion is relieved by moving the inhabitants into the country. "Village industries would spring up, the demand for factory goods would increase; many owners would be led to establish works in rural areas." If only Samuel Butler were alive to-day he would have penned another fine chapter to Erewhon. He would have described a population herded on special reserves protected by legislation, while the remainder of what was once country would be given up to an evenly distributed monotony, neither country nor town. In his quaint way he would have suggested that next time the Erewhonians might reconsider—if mess there had to be—the question of returning to a number of small messes instead of one large one.

Bereft as the public is of an intimate sense of architectural taste, there is a danger in its choice of new masters that it may blunder again. The distractions and considerations of this age may find reconciliation in some form of legislation to preserve this or that "beauty" spot, but these contradictions are not the full account of our ignorance of the disease. We believe that ugliness in building will never be tracked down until we try to understand human psychology. If we offer the facile generalisation that our social development is wrong because the public continues to build some very deplorably ugly houses, we merely balance our hope of a new social structure against the belief that the stock of architectural taste is bankrupt. This belief is one of the cardinal errors. We conclude that the moral fervour of the seventeenth-century puritanism treated beauty as a wile of the devil, but we are not so certain as many contemporary writers that the nineteenth century deliberately trampled it underfoot. There is such a thing as being too preoccupied with other matters to take notice of art, one way or the other. The nineteenth century may have been immersed in material prosperity: we may be immersed in the pursuit of pleasure. These are wide generalisations, we admit, but on the whole, we are still inclined to the belief that the public is not deliberately seeking ugliness. The desire to flee from it is a proof that the cause is not a wilful choice, and the manner of avoiding it is proof that the cause is not understood.

From all accounts it will be a happy day when the housing shortage is ended. Thus does a nation begin with high hopes and end in disillusionment. But we claim that the standard of design and accommodation in post-war houses designed by architects shows a great advance on the pre-war houses. We are glad to see that Mr. St. John Ervine has no illusions about the causes of ugliness. "I am convinced," he says, "that one of the greatest dangers to any community is this energetic tasteless man." He takes the builder to task for his dreadful little modern houses—"the expression of commonplace, dingy minds." He points out that when a town contains many examples of an older and beautiful architecture, "the local builder will cheerfully erect a devastatingly ugly house as if he had never seen the beautiful buildings about him." All this is true, and is no doubt a platitude to the architectural profession. The position, we suppose, is that when the public and the local builder between them have made a hopeless wilderness, there will be a clamour for some form of "artistic" supervision, coupled with reserved areas for further protection. And yet we read in Sir Leslie Scott's letter to the *Times*, "that it should be borne in mind that good architectural appearance is, in the vast majority of cases, no more costly than the ugly buildings now being put up."

The position seems to us to call for a large measure of clear-headed, coherent thinking. We are not impressed with the idea of saving patches of "Rural England" as a part solution, leaving the other part to be dealt with by the light-hearted politician to accommodate his ideas of rural development and urban congestion. The problem first and foremost is an architectural one, and the sooner this is realised the better. Meantime, we take it as a matter for congratulation that the nation is aroused. Whether it will attack ugliness or merely set up a defence against it entirely depends upon the intelligence of the staff work.

NOTES

1927. As the curtain goes up on the new year, inaugurated as it has been by sky and sunlight, as though to whisper hope to those who fear, it is well in this spirit to look at the situation in which we find ourselves. We are born to change continually, and if for the better we should greet it. May we not hope that this is the case to-day? A new epoch would appear to be dawning in better understanding of mutual relationships; appreciation of the fact that interests are not really opposed, but flourish most when shared together; that even the secrets, the suppressions of commerce and art, are mistaken notions of what promotes success and well-being. For it is not money or wages but production which is the fundamental issue, because in the welfare of this is contained all the rest. To make production efficient, mutual and humane, will do a thousand times more than the outlook on profits only, while it will lead incomparably to the betterment of life. So we may well think hopefully of a year which, from a cloudy background of financial difficulty, strikes, and divisions, points now to such better things.

Art and Industry. AND what concerns us more nearly here is the bearing of all this on building, craftsmanship and materials. The relationships not only of industry and democracy and their reconcilement, but the interests of beauty as well. For beauty only spreads through harmony; no music sounds through her strings save when these southern winds blow. Art is the only thing that spiritualises daily life and work, and is the safeguard against the abuses of industry when profits count for more than service. All good building is stamped with one or the other of these aims, for we build as we write, or as we paint—ourselves. We see ourselves in what is done. It cannot be one thing and we another. In service and humanity there is reconcilement and beauty for all of us. As the greater includes the less, so as we approach to more efficient, mutual and humane production, will it inevitably repay us with ampler life. It is no sentimentality that we should be dwelling on such thoughts, for in them lie the best promise of better things—the promise of to-morrow.

Pessimism. THERE is perhaps both too much pessimism and too much shallow optimism for us to accept either the one or the other. Our optimism may well be built on healthy pessimism, though best, perhaps, to indulge in neither too much. And the more we really understand the facts of our time, the less we shall do so. We shall look less to politicians and reformers to do for us what we now see we can better do for ourselves. It is individual responsibility on which the future rests.

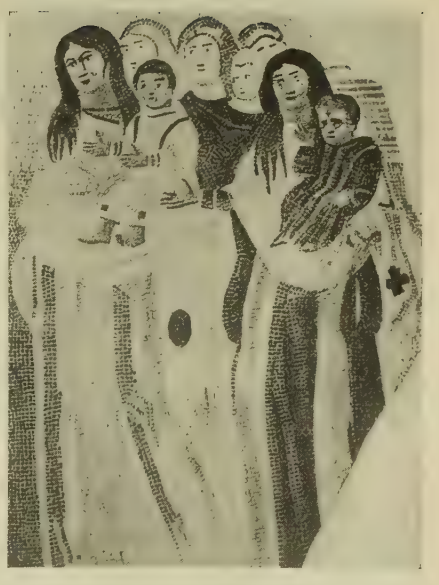
Our Leader. IT is a true but trite observation to say that while we deplore so much ugliness in building, there cannot be any doubt that where an architect has been employed the result has been an improved standard of design. Unfortunately—for many reasons, which require thorough investigation—the architect's services are utilised on a very small percentage of the houses which are built. The advice given recently by the Prince of Wales ought to convince a number of people who, hitherto, have thought differently. Only recently we noted, at a fashionable little sea-coast town, that the only decently designed buildings erected during the last twenty years were the group of houses erected under the first Government housing scheme. In every way—in material, grouping and design—they were far ahead of any efforts of the local builder. We realise, of course, that speculative building is an aspect of the problem—and a large one—which requires very careful investigation.

Building Research. SINCE the Building Research Station of the Department of Scientific and Industrial Research was removed in the early part of 1926 from temporary accommodation at East Acton to more permanent buildings at Garston, near Watford, the building industry has made far more use of the technical experts now available to help to solve practical problems confronting builders in this country. The expansion, indeed, was expressly made in order that more might be done in this direction. In previous years the work had been largely concentrated on general research rather than upon an attempt to find answers to immediate difficulties; but during last year at Watford the number of requests for special investigations was more than double the number undertaken during the previous year. In recent months there has been considerable discussion in technical journals on the proposition to establish a Chair of Building at the University of Manchester. If this is realised, the Building Research Station should be of great assistance in helping towards the development of a science of building. New materials such as steel and concrete are being increasingly used. The effect of strains and stresses upon higher buildings needs to be more accurately estimated. The builder of to-day, and still more the builder of to-morrow, needs scientific training just as much as an engineer. It is now realised that it is a mistake to regard the education of builders as a craft study, and that if the Manchester Chair of Building is formed, it will no doubt work in close association with the Building Research Station, with a view to communicating the results of scientific studies and investigation direct to the younger generation in the industry.

Monuments in Minorca. MR. FREDERICK CHAMBERLIN, writing in *The Times* of December 30, gives an exceedingly interesting account of the explorations he has made in

St. Maria Maggiore in Rome. (*See page* 7.)

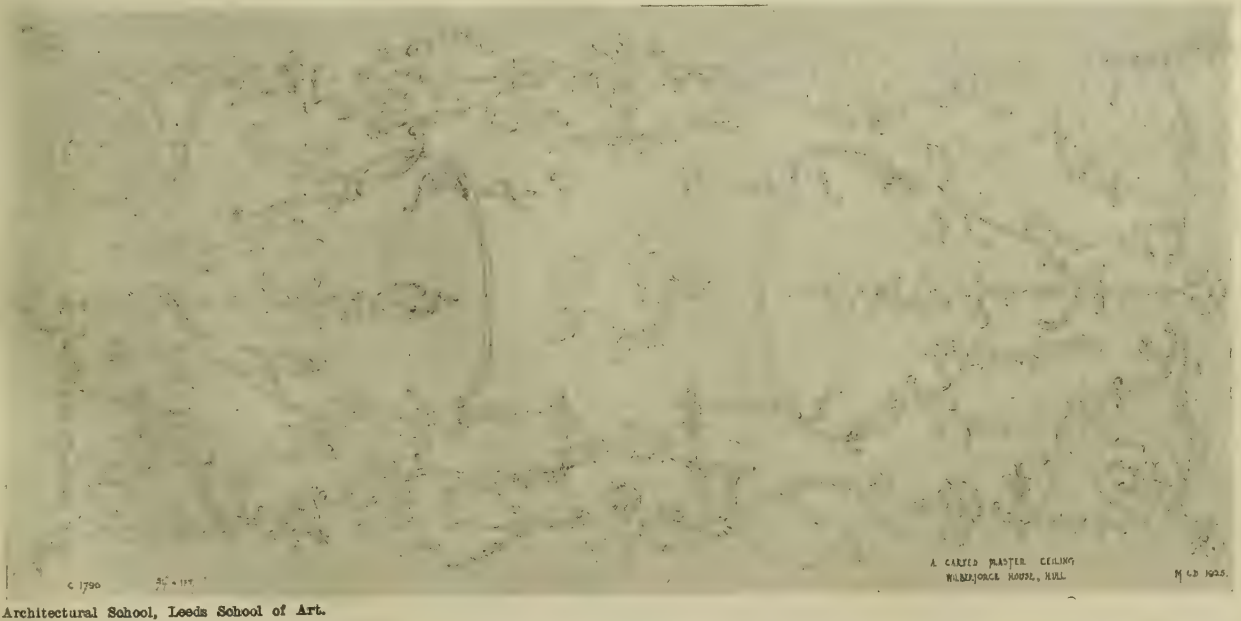
FROM "THE GOLDEN AGE OF CHRISTIAN CLASSIC ART." BY RICHTER & TAYLOR, 1904.



'Apocalyptic Vision of St. John," in the Apse in the Chapel of Sandhurst Military College. (*See page* 7.)

Minorca. There exist, apparently, three kinds of prehistoric monuments on the island. There are stone mounds, known as "Talayots," up to 30 ft. high, built with uncemented blocks, with the sides battered, and of these Mr. Chamberlin discovered no less than 186. The second type, of which sixteen are now known, are called "Taulas," and consist of two huge stones one lying across the other, as in the letter T. The third type of monument is a long, low, monolith, made in the shape of an overturned boat; these are called "naus," and sixteen have been discovered. It is pitiable to read that such monuments are being converted into road metal. There exist, however, hundreds of acres of likely territory, covered with almost impenetrable undergrowth, and we hope that the book that Mr. Chamberlin has promised will awaken an interest that will help to preserve these unique structures.

The Burlington Fine Arts Club. At the Burlington Fine Arts Club exhibition of pictures, drawings and furniture, one may see from the pictures of London by Canaletto what charm we have lost since Georgian times. Such pictures as the Savoy Palace (23), the Old Horse Guards (36), and Vauxhall Gardens (31), by Canaletto, show what we have lost and are never likely to recall.



Garden Squares. Amongst the serious results which the commercial spirit may bring upon us, we have to consider the ever-increasing height of buildings and the possible encroachment on or destruction of the many garden squares which have given such character and charm to our over-grown city. The Foundling Hospital, with its adjacent squares, is one of the pleasantest features of central London, and now that the hospital is uninhabited and a Bill before Parliament imperils it, we cannot help wondering how far our other garden squares may fare in the onward march of the commercial spirit. It would be hopeless to put impossible difficulties in the way of necessary road transport through the city, but we cannot see that the preservation of the garden squares need militate against better regulation and improvement of traffic facilities.

High Buildings. Few have uttered more definite counsel for us than distinguished American architects, who have visualised the bad results which will accrue to London if it is allowed to become a city of sky-scrapers. We have spoilt for ever the scale of Regent-street, but fortunately the new buildings about Waterloo-place have not destroyed its spaciousness and dignity. There are a few places, such as Portland-place and Holborn, where fairly high buildings may be tolerable, but the real remedy we have to find is how to fix some sort of limit to the overcrowding of clerks and offices in our already over-crowded streets. There are many huge establishments for trade or official work which would be far better placed at a distance from our crowded centres—where work would be carried on under better conditions. In these days of easy communication, it would be no hardship if many crowded buildings with their thousands of occupants were transferred to suburban areas.

From St. Maria Maggiore in Rome. (*See page* 7.)

Flemish and Belgian Art. A great pleasure awaits those who can appreciate the treasures of Flemish and Belgian art just opened at the Royal Academy. Some of the masterpieces of the painter's art are to be seen, besides fine examples of tapestry and carved figures. Some of the small paintings of heads in this collection certainly rank as perfect examples of the artist's work.

Architectural School, Leeds School of Art.

Students' Competitions of the Leeds and West Yorks. Architectural Society, 1925. Measured Drawings: 1st Prize.

By Mr. J. R. Tolson.

GENERAL NEWS

Professional Announcements.

Mr. Cyril A. Farey, A.R.I.B.A., has moved from his old offices and is now practising at No. 7, Bedford-square, W.C.1. Telephone: Museum 2420.

Mr. Hector O. Corfiato, S.A.D.G., has been appointed by the Senate of the University of London as Senior Instructor in Architecture.

Protection of Ancient Buildings.

Mr. Henry Elford Luxmoor, M.A., formerly a master at Eton, has left £200 to the Society for the Protection of Ancient Buildings.

Presentation to Lord Lee.

To commemorate his work on the recent Royal Commission on Cross-River Traffic, Viscount Lee of Fareham, the chairman, has been presented with a silver cup by his colleagues. The cup is the work of Mr. Omar Ramsden, and is surmounted by a statuette representing St. Christopher bearing the infant Christ. The fact that the Commission was appointed by the King on the eve of St. Christopher, the patron saint of "travellers who cross rivers," lends appropriateness to the design.

Guildford Municipal Buildings.

Guildford Town Council were informed last week that the Municipal Building Sub-Committee met on November 11, the architect, Professor A. E. Richardson, being present, and considered various sites for the proposed Municipal Buildings and Assize Court. The chairman of the sub-committee, the architect, and the Borough Surveyor later visited the sites, and it was decided to hold another meeting to discuss the matter before Professor Richardson submitted his formal report.

Gift for Archæological Work.

Miss Gertrude Margaret Lowthian Bell, C.B.E., F.R.G.S., left unsettled property in her own disposition of the gross value of £25,604, with net personality £19,535. She left £6,000 to the British School of Archæology in Iraq upon trust for investment and to apply the income in archæological work in Iraq, but if this school should not have been founded at her death, this bequest is to revert to the British Museum upon trust for similar purposes, and she left a selection of her books to the said school.

Discovery at Windsor Castle.

During the work of securing the defective walls of the Guard Room situated between the Salisbury Tower and the Garter Tower at Windsor Castle, what appears to be an earlier wall has been found about 2 ft. 6 in. from the face of the outer wall. The latter wall is supposed to date from the time of Henry III, and is of heathstone, with deep horizontal bands of Reigate stone, but the wall discovered consists of small squared blocks of chalk. The wall in its entirety measured about 10 ft. 6 in. in thickness. The foundations of the Henry III wall do not go to the depth of the chalk wall and the former has probably become displaced.

Memorial Gardens, Belfast.

According to the *Evening Standard*, a scheme for the conversion of Belfast City Hall grounds into a Garden of Remembrance, designed by Sir A. Brumwell Thomas, has been in hand for two years, and the Corporation have passed a resolution to notify the architect that unless he gives the directions necessary to enable all completed work for which he was engaged to proceed before January 18, they will consider his failure to do so a breach of his engagement, and will take such steps as they may be advised. Sir A. Brumwell Thomas, as our readers will know, was the architect of the Belfast City Hall.

Charles I Coat of Arms.

A well-preserved tablet bearing the coat of arms of King Charles I has been laid bare in the chimney corner of a house in York, which is vested in the Dean and Chapter. Instructions have been given for the tablet to be encased in glass and preserved for all time. The find was made by workmen engaged in redecorating the house. It was only after several thicknesses of wallpaper, plaster, and wooden panelling had been removed that the tablet was revealed. According to local stories, the house in question is supposed to have been occupied by King Charles I himself on the rare occasions of his visits to York.

Exhibition of Students' Work.

We spent recently a very interesting afternoon at the Shoreditch Technical Institute, where an exhibition of students' work done during the session was being held. The school, which is under the direction of Mr. Shadrach Hicks, specialises in craftsmanship trades, amongst them being internal decorating and furniture and cabinet making, metal-working, clay modelling and the like. Students are divided into two main classes, course students (of which there are 160) and evening learners, who number about 300. There are also a number of boys who are taking a teacher's course. The exhibition was generally interesting, especially in the furniture and cabinet-making section. Exhibits of various kinds, ranged from simple caskets, the work of the first-year boy, to a very fine writing desk in polished mahogany, made by a third-year student, and filled with small drawers of beautiful workmanship. In the metal-working section we noticed particularly a loving-cup of exquisite proportions in oxidised brass, a replica of a Greek model.

Art and Industry.

A plea for greater co-operation between employers and schools of art was put forward by Mr. R. R. Carter, of the School of Art, Walsall, in his presidential address at the annual meeting of the National Society of Art Masters at the Victoria and Albert Museum. He said that looking back over their history the most striking alteration had been the gradual development and perfection of technical design. Formerly, most, if not all, of the schools were obsessed by the supreme importance of pictorial figure work. Now, not only had schools of art turned to the study of design but they had done it in the proper manner—by technical production. There had yet to grow up in England a widespread system of direct co-operation between employers and schools by means of which young employees would attend a school, and particularly a school of art, during the day in the employer's time and at the employer's cost. It was a system apparently as full of advantages to employer and employed that the long delay in its consummation seemed hard to understand.

The Proposed Empire Academy.

A scheme for the establishment of a British Empire Academy to provide a central home of the arts in London, where the talent of Great Britain and the Dominions can be displayed and maintained, will be publicly launched at a meeting which Lord Howard de Walden is to call early in the New Year. The proposed site is on the Thames Embankment in Grosvenor-road, Westminster, and £1,000,000 will be required for the project. Temporary premises are already available on the site, and the rent for these has been guaranteed for the first three years. These premises can only be leased for eight years, but it is hoped that by that time there will be sufficient funds to extend the site and erect the permanent building. The main object of the British Empire Academy is to provide adequate exhibition space for painters and sculptors, and also a theatre and concert-hall large enough to enable modern composers, musicians, and dramatists to display their talents. The provisional committee, of which Lord Howard de Walden is chairman, contend that Burlington House is now too small for its object, the encouragement of the fine arts, and they point out that every year 14,000 works of art have to be rejected by the Royal Academy owing to lack of space. The premises now under consideration would, it is understood, provide two large halls each 75 ft. long, a third long gallery 200 ft. long, and a fourth 150 ft. long. It was proposed to arrange for one of these halls to be used for concerts, plays, dances, &c., with a seating capacity for 800 people.

COMPETITION NEWS

New Office Building, Scottish Legal Life Assurance Society, Glasgow.

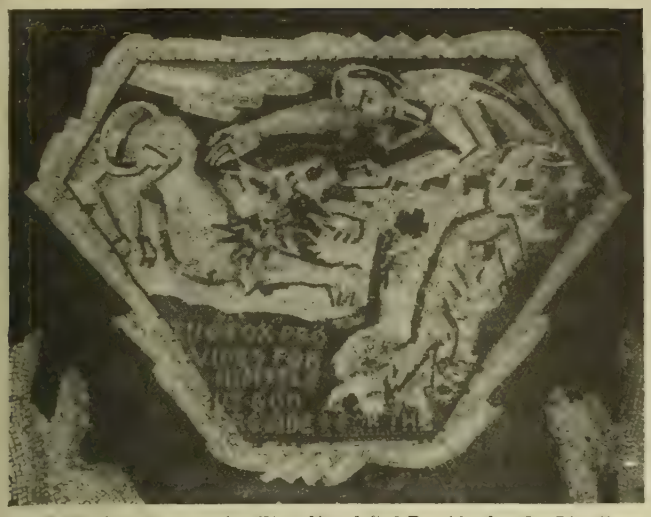
In this competition, for which there were seventy candidates, the following have had intimation that their designs have been selected for final competition:—

Allan & Friskin, Dundee.
Allan F. Duncan and Alex. Adam, Glasgow.
James B. Dunn, Edinburgh.
A. M'Innes Gardner, Glasgow.
Hutton & Taylor, Glasgow.
S. P. Silcock & Son and S. E. Mabon, Warrington.
Welch & Hollis, London.
Wright & Wylie, Glasgow.

Each of the competitors will receive a premium of £200 on submission of a final design. The site for the new building is in Bothwell-street, opposite the rooms of the Y.M.C.A. The building will consist of ten stories. The cost of the work will be about £300,000.

Mr. John Keppie, A.R.S.A., is the assessor.

Annual Competition of Industrial Designs.



The Royal Society of Arts fourth annual competition of industrial designs will take place in June, 1927. Entries can only be received from individual designers, not from firms, and the competition will be divided under the following heads:—(1) Architectural Decoration; (2) Textiles; (3) Furniture; (4) Book Production; (5) Pottery and Glass; and (6) Miscellaneous.

In Section I, Architectural Decoration, subsection (1) Decorative Architecture, the Council of the R.S.A. offer, under the John Stock Trust, a prize of £50 for designs for an entrance hall to a block of high-class flats in an important thoroughfare. In subsection (2) the Council of the R.S.A. offer, under the Mulready Trust, a prize of £20 for the best original topographical drawing (*i.e.*, a drawing of a building or group of buildings), or series of not more than six topographical drawings, in any medium. In subsection (3), Messrs. Baguès, Ltd., offer a prize of £50, and Mr. A. W. Martin a second prize of £25, for the best design of wrought-iron gates for a carriage entrance with two side gates for pedestrians in an important city company building. In subsection (4), the Chairman of the Architectural Decoration Committee offers a first prize of £15 and a second prize of £5 for a pedestal for an equestrian statue. In subsection (5), a prize of £10 10s. is offered by Messrs. Ackroyd & Best, Ltd., glass manufacturers, for a design for an electrical fitting intended to occupy the central position of an average-sized room. In subsection (6), Messrs. Shuffrey & Co. offer a prize of £5 5s. for a design of a fireplace, including a mantelpiece of marble, in the vestibule of an aeronautical club. In subsection (7), The Lewis Berger Scholarship, of the value of £60 to cover the cost of fees, maintenance, materials and travelling expenses, is offered for competition annually. It is tenable at the Royal College of Art, London, for a period of three months for the purpose of study in decoration and decorative painting.

In Section III, Furniture, subsection (1), Messrs. W. Turner Lord & Co. offer a first prize of £20 and a second prize of £5 for designs for furniture in walnut of Queen Anne period, suitable for a drawing-room or dining-room. In subsection (2) Messrs. Green & Abbot, Ltd., offer a first prize of £20 and a second prize of £5 for designs for inlaid furniture suitable for a bedroom. In subsection (3) Messrs. Waring & Gillow, Ltd., offer a first prize of £20 and a second prize of £5 for designs for furniture of a restrained modern style for a dining-room or bedroom. In subsection (4), Messrs. Frederick Tibbenham, Ltd., offer a first prize of £20 and a second prize of £5 for designs for decorated furniture painted in colour, with figure subjects.

Full particulars of this competition may be obtained from Mr. G. K. Menzies, M.A., the Royal Society of Arts, John-street, W.C.2.

[There are no changes this week in the Competition Table, which is accordingly withheld.]

"The Fox Provides for Himself and God Provides for the Lion."

"The Cistern Contains the Fountain Overflows."

"Expect Poison from Standing Water."

"The Eyes of Fire; the Nostrils of Air; the Mouth of Water; the Beard of Earth."

MOSAIC WORK. BY MR. BORIS ANREP. (*See page* 7).

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Quantity Surveyors' Fees.

SIR,—I was pleased to see the note from Mr. A. Goddard, Secretary to the Surveyors' Institution, in your issue of the 17th ult. I agree there should be no necessity to have to warn members against the practice of sacrificing fees in favour of architects, but I am of the opinion that such a warning, in the form of a circular, would be much appreciated and of assistance to quantity surveyors when negotiating terms with architects for the preparation of quantities.

The remarks contained in "Quantity Surveyor's" letter in the same issue are well founded and can be substantiated. The quantity surveyor is kept too much in the background, and direct appointments by building owners would, I believe, go a long way to eliminating the practices referred to. Q. S.

A Charing Cross Bridge Scheme.

SIR,—About ten years ago, you published in *The Builder* drawings and suggestions of mine for converting the existing Charing Cross railway bridge into a carriage way to the Surrey side, and this was followed with excellent suggestions by other architects. Having taken much interest in this subject, and having studied the drawings published in *The Builder* of December 11, showing a scheme for roadway approaches to a beautiful stone bridge, which seems to have met with much approval, I am venturing to submit a plan I have made showing a much more simple development at an immensely less cost, in the hope that it may be worth consideration.

There seem to be three objections to the approved scheme—the enormous cost, the bridge over the Strand, and the small openings to the lower deck of the proposed bridge which would mean a gloomy railway tunnel, and the blocking out of a charming view of the river and of the Houses of Parliament, Westminster Abbey and St. Paul's. By my plan, the approach to the bridge from Charing Cross-road is more direct and much less costly, as it covers ground mostly owned by the railway company and does away with the proposed bridge over the Strand. For the purpose of enlarging the railway station and obtaining three more lines of rails, it is suggested that property on the south side adjoining should be secured, and that a new railway hotel should be erected here in place of the existing hotel, which would have to be pulled down to make way for the inclined roadway. If more land is required for the station, then Craven-street and the houses on both sides should be purchased.

It is proposed to leave Villiers-street as at present for approach to the Metropolitan railway station. It is suggested that, as very heavy steam engines are now replaced by motor engines the present bridge can be reconstructed as a double-deck bridge, and no doubt architects co-operating with engineers could design a steel bridge to equal in artistic merit the one in stone.

FREDK. NESBITT KEMP.

"Consistent Cast-iron Designs."

SIR,—Mr. Maurice B. Adams asked in your issue for December 17 for instances of mixed iron and cast-brass decoration and for possible reasons for the mixture. In the grand staircase at Howick Hall, the residence of Earl Grey, burnt down last February, the balustrade was of simple wrought-iron framing with highly-finished cast-brass filling. I think the reason for the brass is that it can be cast finer than iron and is more susceptible of chasing by the hand to make it even finer.

G. REAVELL.

Sherborne Abbey.

SIR,—In your issue of August, 1921, you were good enough to publish a letter regarding a visit of mine to Sherborne Abbey with reference to the restoration of the Lady Chapel, Sherborne. A few days since I had the pleasure of visiting again the Abbey, the work now being completed with the exception of the east window. Needless to say, the work is so beautifully carried out that one can hardly imagine the Chapel had been used for dormitories. The two new parclose oak screens are especially fine examples of modern work. It is to be hoped that the necessary funds will be available for the completion of the east window.

EDWARD VALE.

MEETINGS

FRIDAY, *January* 7.

Glasgow Architectural Craftsmen's Society.—Social meeting at Ca'doro Restaurant. At 7.30 p.m.

London Society.—Visit to the Central Criminal Courts, Newgate-street, E.C.1. At 2.30 p.m.

Royal Sanitary Institute.—Mr. W. W. Jameson on "Elementary Statistics." At 90, Buckingham Palace-road, S.W.1. 6 p.m.

MONDAY, *January* 10.

Surveyors' Institution.—Mr. F. G. Baxendale on "The Effect on Values of Town Planning Schemes in their Various Stages." At 8 p.m.

Architectural Association.—Mr. Harold Stabler on "Glazed Sculpture." At 7 p.m.

Edinburgh Architectural Association.—Interchange of Lecture with Glasgow Association Section. At 8 p.m.

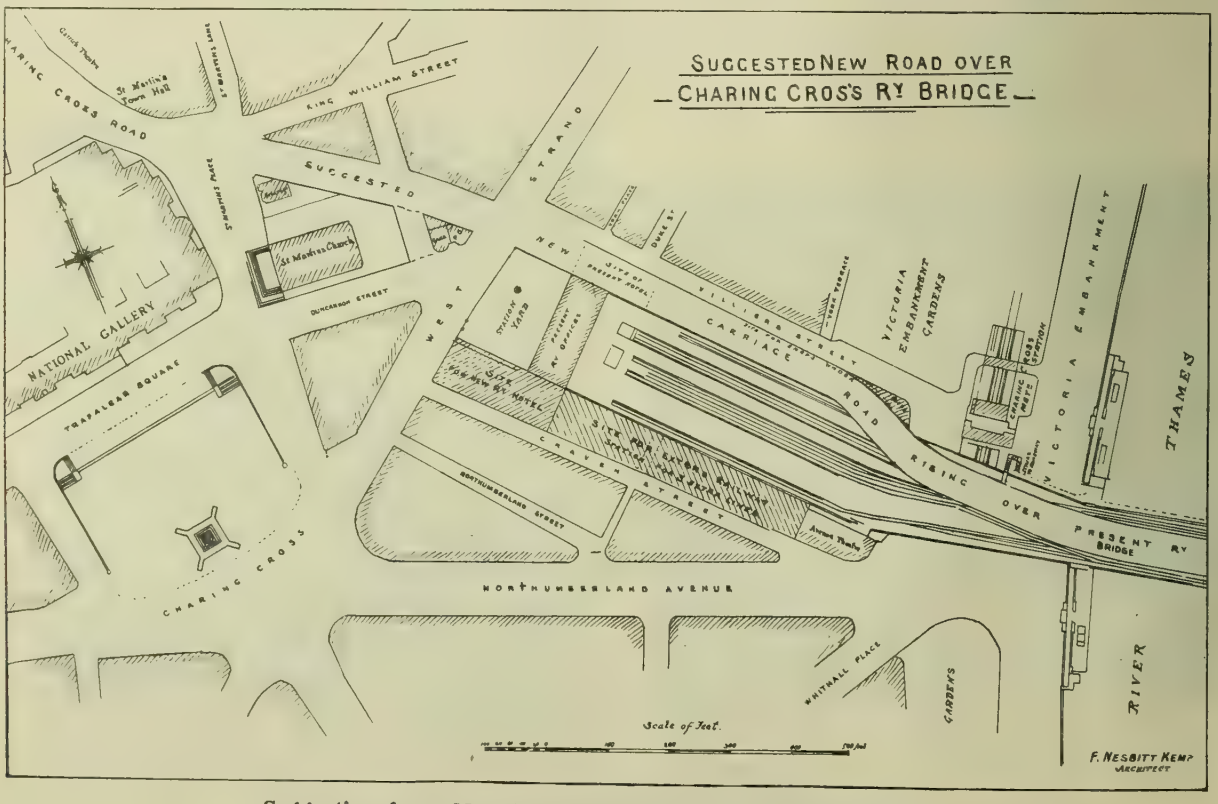
Royal Sanitary Institute.—Mr. A. E. Munby on "Elementary Science." At 90, Buckingham Palace-road, S.W.1. 6 p.m.

TUESDAY, *January* 11.

College of Estate Management.—Mr. G. Mould on "The Effect of Recent Legislation on (*a*) The Law of Landlord and Tenant." At 35, Lincoln's Inn Fields, W.C.2. 5.30 p.m.

The Illuminating Engineering Society.—Messrs. Jones, Lingard and Catten on "Flood-lighting." At 15, Savoy-street, W.C.2. 6.30 p.m.

WEDNESDAY, *January* 12.



Edinburgh Architectural Association.—Mr. W. MacKay Mackenzie on "Palace Plan in Scottish Castles." At 8 p.m.

Liverpool Architectural Society.—Mr. Howard M. Robertson on "America." At 13, Harrington-street.

The Institution of Civil Engineers.—Discussion on "Dragline Excavators," by Mr. F. H. Livens. At Great George-street, S.W.1. 6 p.m.

FRIDAY, *January* 14.

Royal Sanitary Institute.—Mr. A. E. Munby on "Elementary Science." At 90, Buckingham Palace-road, S.W.1. 6 p.m.

Suggestion for a New Double-Deck Bridge at Charing Cross.

BY MR. F. NESBITT KEMP.

"MOSAICS."

THE PRESIDENT, MR. E. GUY DAWBER, took the chair at last Monday's meeting at the R.I.B.A., when a most interesting paper on "Mosaics," illustrated by a large number of lantern slides, was read by Mr. Boris Anrep. In opening, the lecturer said that the influence exercised by the material on art had not been sufficiently explored, but it was evident, however, that this influence was of an intimate and important nature. Materials affected one by a quality of their own, which formed a part of the complex art emotions. On the other hand, the material did not remain a passive matter brought to life by the will of the artist alone; it was a potent factor able to influence creative imagination, to guide its perilous walks, even to determine the ultimate aim of the artist.

Every material had a latent character, peculiarities and limitations. It might become a powerful ally to the artist who could liberate those forces and express himself in harmony with them. The magic power of the material, so long as the artist obeyed its laws, could save his art from being stillborn. But should the artist stifle the originality of his material by forcing it into giving effects foreign to its nature, the very life of it would go and with it his art. For 500 years the art of mosaic had been in a lamentable condition. Since the rise of fresco, tempera and oil, the mosaic workers, fascinated by the mastery of these arts, had remained satisfied to copy pictures made in those media. Even in the twelfth century the calligraphy of the eastern miniature seduced the mosaic artist into slavery. Later, they gratified their ambitions by petrifying the pictures of great painters like Raphael and Rubens, or the cartoons specially prepared for them after the sketches of artists in pencil and water-colour. The elegant continuity of lines, the indistinguishable gradation of tone, the fluid passages of hues of colour and other delicacies of pictorial art which thrive in oil and other media, were considered virtues in themselves and were imitated irrespective of the material. Mosaic workers had now learnt to make every possible *tour-de-force* with the clumsy tesseræ. The workshop of the Vatican prided itself on possessing 22,000 shades of enamel. Cut to microscopic proportions, those tesseræ could perform at will any acrobatic feat of pseudo-painting. In the best period of mosaic art, less than 50 shades were considered sufficient.

Mosaic, continued the lecturer, was closely linked to architecture, being essentially a monumental art. The very quality of extreme resistance gave a feeling of indestructible permanence: "*La vera pittura per l'Eternita.*" That should imply not only material endurance but should also compel the imagination towards simple and great essentials. It might be asked whether or not mosaic was a form of art which belonged to the past and, if so, why so much anxiety about reviving the dead? It would seem, indeed, a worthless task if no interest in that form of decoration existed at the present day. But in point of fact there was every reason why modern architecture should be interested in mosaic. The introduction of colour into building was a problem which concerned the architect closely, and mosaic material was quite especially qualified for that purpose. The richness of its hues, the variety of its texture, its hardness, permanence, resistance to atmospheric action, its capacity for reflecting light, put mosaic on terms of equality with the hard building materials, brick, stone, marble and concrete.

Modern architecture was evolving a new type of very large and monumental building to meet the needs of the great Imperial, industrial and commercial organisations. Those vast monuments would inevitably call upon mosaic for purposes of commemoration or for purely architectural decoration. In private houses, more invention and fantasy was now being shown in the decoration, and the demand for non-commercial, original designs by individual artists was growing daily, and mosaic offered a unique opportunity for introducing amusement and gaiety into a house and for embedding them into the very core of the structure.

Modern art was teeming with ideas eminently suitable for mosaic decoration, while mosaic establishments continued to turn out works without a breath of human spirit in them. No one was satisfied with those productions, least of all architects, who often sighed because the mosaics spoiled the effect of the building through lack of æsthetic tact. There were two directions in which modern mosaic required amendment. An effort ought to be made to bring mosaic back to its pristine position as a means of direct artistic self-expression, and, in the second place, it ought clearly to be recognised that mosaic decoration would have to abandon its pictorial arrogance and subordinate itself to the needs and indications of the architecture, so that it should not be a parasitic growth stifling its noble support for the sake of self-assertion, but that it should wholly serve to complement the ideas inherent in architecture.

Any surface decoration had its bearing upon the general architectural effect, but mosaic could have more influence on it than any other form of decoration. The mosaic could be called upon to give a scintillating light and colour in dark recesses, to envelop architectural forms, to soften surfaces and edges, to create useful points of stress and repose; to deepen and flatten effects of perspective; compress or distend proportions; to create the feeling of continuity or to separate architectural elements by staccato of isolated motifs; to concentrate or diffuse the attention of the spectator or guide his wandering gaze along a sympathetic rhythm, thus amplifying the enjoyment of architectural features. The harmony of a mosaic decoration with its architectural environment was essential. It would be a mistake to believe that mosaic need be confined to one particular style of building or one particular class of subject. Religious subjects and Byzantine architecture historically were very much connected, but it was not only in religious scenes treated in the spirit of hieratic solemnity or in the *réchauffé* of Byzantine ornament that mosaic was at its best. Mundane and frivolous subjects of modern town life, bucolic pleasures, as well as the business activities of the city could form delightful subjects for mosaic decoration, and be treated in a style suitable to the building, recording thus for future generations images of our modern civilisation, more revealing of its true spirit than the frigid commercial rhetoric now in vogue. Vast spaces, the fascination of archways, the mystery of a dome, friezes, niches and pavements would always offer an enviable field for mosaics, but even in a modern suburban semi-detached villa a mosaic medallion on the hall floor could give a delightful scope for a mosaic inspiration. The short and, if he might say so, oblique statements of life which mosaic technique imposed were entirely in keeping with the purpose of mural as with floor decoration.

The reliance of mosaic on a composition similar to that of sculptural reliefs which did not favour a deep pictorial recession allowed the unhindered assertion of architectural surfaces. The subtleties of naturalistic experience in Dutch art, the delight in sensual beauty of the Venetians, were alien to the mosaic material, which lifted even a frivolous subject to the level of highly distilled æsthetic qualities, and the intellectual content of the composition acquired through the proper mosaic technique a special significance. The genius of mosaic transformed even a trivial object into a monument of the epoch.

After the reading of his paper, Mr. Anrep proceeded to show upon the screen a series of slides of mosaic work, ancient and modern, giving some critical comment upon each example. In the course of his remarks he said it was in the first century of the Christian era that the best mosaic work was done. Having shown some fine examples of this and later periods, he followed on with slides illustrating the gradual falling away that occurred from the true genius of the material, and being especially critical of twelfth-century Italian work. Alfred Stevens's head of the Prophet Daniel, now in the Victoria and Albert Museum, was shown as an example of mosaic in which the material was wrongly handled owing to the modern practice of working exactly to an artist's cartoon. To-day, the lecturer said, we were largely creating deadly dull imitations of graphic patterns instead of allowing the material its own natural expression. Decoration of a religious character was, now so complicated with committees that it was impossible for any self-respecting artist to do what he wanted. The lecturer concluded his illustrations with slides of a number of his own works, both of a religious and a domestic character, including a chapel in Scotland, the Sandhurst Memorial Chapel, an icon in Westminster Cathedral, the floor of a house in Chelsea, and a few of the medallions from the floor of the Blake Room at the Tate Gallery, all of which were applauded by an appreciative audience. As his last slide the lecturer showed a fourth-century head, which he described as a masterpiece of mosaic.

Discussion.

Mr. E. R. D. Maclegan, C.B.E., Director and Secretary of the Victoria and Albert Museum, proposed a vote of thanks to Mr. Anrep, in the course of which he said he was not sure that the lecturer had been quite just to the twelfth century. He had shown work done in Italy by artists using the Byzantine tradition at second hand, but if he had shown some of the twelfth-century mosaic work at Daphni, at Athens, the twelfth century would have cut a much better figure. Continuing, he said he had noticed no shock of transition when passing from Mr. Anrep's own work to that magnificent fourth-century head that the lecturer had shown them. Everyone must feel that the lecturer had captured in his own work the spirit of the fine early mosaic. The speaker recalled a saying of William Morris that "Mosaic was very much like beer; it was an excellent thing provided you got enough of it at a time." That, he thought, was very sound, and he hoped that private and public patrons might be found to provide the necessary opportunities for the mosaic artist.

Mr. Philip Sawyer (of Messrs. York & Sawyer, of New York), seconding the vote of thanks, said that in America they mostly regarded mosaic as a floor material, and used it as such with travertine or stone borders. It was used extensively in the corridors of flats and hotels, but on the whole it was very mechanical work.

Mr. Charles Aitken, Director of the Tate Gallery, said that Mr. Anrep's floor of the Blake Room at the Tate Gallery was successful in keeping the mosaic convention, but with an added vivacity. One of the characteristic charms of mosaic was, he said, the irregularity of the pieces and of the joints in between; and he recalled seeing workmen carrying out repairs in the mosaics of St. Mark's and doing their best to destroy this quality by arranging the pieces with the utmost regularity and exactitude.

Mr. C. P. Walgate, Vice-President of the

Cape Institute of Architects, and Mr. Sidney Toye having contributed a few remarks to the discussion,

The President, putting the vote of thanks to the meeting, said that in this country we very seldom had opportunities of using mosaic except in floors. He wished that they could have seen the slides in colour; much of the effect of mosaic was lost in black and white.

Mr. Anrep briefly replied.

Associateship R.I.B.A. and Office Experience.

The following announcement is issued by the Board of Architectural Education :—

The attention of candidates for the R.I.B.A. Final Examination is called to the fact that no successful candidate will be admitted to candidature as Associate without having had at least one year's experience in an architect's office or in building work and/or in a builder's office, or in gaining knowledge of the practical side of building.

The Examinations, November and December, 1926.

THE INTERMEDIATE.

The Intermediate Examination, qualifying for election as Student R.I.B.A., was held in London from November 19 to 25, and in Manchester from November 19 to 24, 1926. Of the 69 candidates examined, 31 passed and 38 were relegated. The successful candidates are as follows, the names being given in order of merit as placed by the examiners :—

J. E. Potter.
J. T. Castle.
J. W. Poltock.
J. J. Coleman.
H. C. Farmer.
L. Pugh.
E. J. Harrison.
R. T. Kennedy.
D. C. Hodge.
H. A. Hogarth.
W. R. Helm.
T. L. Marshall.
J. N. Aylwin.
P. O. G. Wakeham.
T. E. S. Thwaite.
A. Bailey.
C. E. W. Boreham.
J. G. Clementson.
P. W. Dawney.
A. H. Farmer.
W. H. Kinnimonth.
O. H. Leicester.
J. L. Morgan.
C. L. Morris.
E. Oakley.
D. Roth.
R. Shaw.
T. F. Thomson.
Anne M. O. Trouton.
N. Willis.
W. G. Wright.

THE FINAL EXAMINATION.

The Final Examination, qualifying for candidature as Associate R.I.B.A., was held in London from December 1 to 9, and in Edinburgh from December 1 to 8, 1926. Of the 38 candidates examined (3 of whom took Part I only), 21 passed (3 in Part I only), and 17 were relegated. The successful candidates are as follows :—

G. E. Bunce.
T. A. Collins.
A. Craig.
G. F. Evans-Vaughan.
W. H. Ford (Part I only).
A. H. Gardner.
A. E. J. Goodall (Part I only).
F. G. Goodin.
R. H. Graddon.
R. N. Guy.
A. J. Hobbs.
A. T. Hope.
F. L. Jackman.
J. E. Lancashire.
H. W. E. Lindo.
C. S. Morley.
H. Overnell.
H. Savage.
L. R. Stedman.
W. L. Ward (Part I only).
F. J. Watson.

THE SPECIAL EXAMINATION.

The Special Examination, qualifying for candidature as Associate R.I.B.A., was held in London from December 1 to 7, 1926. Of the 22 candidates examined (1 of whom took Part I only), 12 passed (1 in Part I only), and 10 were relegated. The successful candidates are as follows :—

J. A. Black.
J. Creese.
E. E. Edmunds.
E. E. Fowler.
C. W. Glass.
J. Harrison.
F. H. N. C. Kemp.
A. F. Lodge.
A. Lomax.
C. A. L. Morant (Part I only).
J. E. Salisbury.
E. R. Taylor.

EXAMINATION IN PROFESSIONAL PRACTICE FOR STUDENTS OF SCHOOLS OF ARCHITECTURE RECOGNISED FOR EXEMPTION FROM THE FINAL EXAMINATION.

The Examination was held in London on December 7 and 9, 1926. Twenty-five candidates were examined, all of whom passed. The successful candidates are as follows :—

H. M. A. Armitage.
A. V. Banks.
H. A. Barton.
Kathleen O. Brayshaw
A. D. R. Cowley.
R. P. Cummings.
W. R. H. Curtis.
R. W. Elder.
L. P. Ellicott.
Sylvia C. Gray.
Jessie M. Greig.
R. G. Grice.
Amy M. Hargroves.
F. W. Harper.
G. A. Jellicoe.
H. A. Johnson.
J. W. S. Monson.
F. Napolitano.
C. H. Short.
J. F. Leopold de Silva.
Z. Sirotkin.*
A. Sleigh.
H. G. C. Spencely.
A. C. Todd.
J. B. Wride.

*This candidate is not a British subject, but has taken the examination for a certificate to that effect.

The Special Examination in Design for former Members and Candidates of the Society of Architects to qualify for the Associateship was held in London from December 1 to 6, 1926. Of the two candidates examined, one passed and one was relegated. The successful candidate is J. Cannell.

The Final Examination.

ALTERNATIVE PROBLEMS IN DESIGN, 1927.

We have received from the Board of Architectural Education a list of R.I.B.A. Problems in Design for the year ending December 31, 1927. Copies of the list may be obtained free on application at the R.I.B.A.

XCI.

(*a*) A design for a Maternity and Infant Welfare Centre.

(*b*) Working drawings for Subject No. LXXXIX (*a*), A Small Housing Scheme.

XCII.

(*a*) A design for a Covered Bridge.

(*b*) Working drawings for Subject No. XC (*a*), A Concert Hall.

XCIII.

(*a*) A design for a Sports Pavilion and Centre.

(*b*) Working drawings for Subject No. XCI, A Maternity and Infant Welfare Centre.

XCIV.

(*a*) A design for an Open Air Swimming Bath.

(*b*) Working drawings for Subject No. XCII, A Covered Bridge.

XCV.

(*a*) A design for a Vicarage.

(*b*) Working drawings for Subject No. XCIII, A Sports Pavilion and Centre.

XCVI.

(*a*) A Small Housing Scheme.

(*b*) Working drawings for Subject No. XCIV, An Open Air Swimming Bath.

DATES FOR SUBMISSION OF DESIGNS IN 1927.

Subj. XCI ..	28 Feb.	Subj. XCIV. ..	31 Aug.
„ XCII ..	30 Apr.	„ XCV ..	31 Oct.
„ XCIII ..	30 June	„ XCVI ..	31 Dec.

COUNCIL MINUTES.

Architectural Education.—On the recommendation of the Board of Architectural Education the Council decided that no Student should be admitted to candidature for the Associateship without having had at least one year's office or equivalent practical experience.

Examinations.—The following results were reported to the Council :—

	Examined.	Passed.	Relegated.
Final and Special, July, 1926	77*	51†	26
Professional Practice, July, 1926..	37	33	4
Special Examination in Design for Society of Architects, Candidates, &c., July, 1926	9	8	1
Intermediate, June, 1926	94	56	38
Town Planning, July, 1926	2	—	2
Statutory Examination, October, 1926—			
(District Surveyor)	8	4	4
(Building Surveyor)	2	—	2

* 6 Part 1 only ; 3 Part 2 only.
† 3 Part 1 only ; 2 Part 2 only.

Recognised Schools.—The R.I.B.A. Silver Medal for Schools of Architecture recognised for exemption from the Final Examination was awarded to J. Morrison, School of Architecture, Robert Gordon's Colleges, Aberdeen.

The R.I.B.A. Bronze Medal (and £5 in Books) for Schools of Architecture recognised for exemption from the R.I.B.A. Intermediate Examination was awarded to Mr. E. B. O'Rorke, Architectural Association School of Architecture.

R.I.B.A. Maintenance Scholarships.—The Board of Architectural Education reported the award of R.I.B.A. Maintenance Scholarships as follows :—

E. L. W. Davies (Colchester), £100 per annum for three years.
B. I. Day (Bideford), £100 per annum for three years.
E. J. White (Hull), £100 per annum for three years.
H. Jackson (Birmingham), £50 for the first year, £60 for the second year, £75 for the third year.
A. K. Brown (Sunderland), £50 for one year.
J. O. Wylson (Kent), £100 per annum for three years (Artists' General Benevolent Institution).

R.I.B.A. PRIZES AND STUDENTSHIPS.

Tite Prize.—The report of Mr. D. Beaty-Pownall, Tite Prizeman 1925, was approved.

Owen Jones Studentship.—The report of Mr. E. Dinkel, Owen Jones Student 1926, was approved.

R.I.B.A. (Anderson and Webb) Scholarship at the Cambridge University School of Architecture.—The award of the R.I.B.A. (Anderson and Webb) Scholarship to Mr. J. T. Alliston was approved.

R.I.B.A. (Archibald Dawnay) Scholarships.—The following awards were approved :—

(i) *Second Years of Scholarships.*—(*a*) An R.I.B.A. (Archibald Dawnay) Scholarship of £75 for the year 1926–1927 to R. P. Cummings (School of Architecture, Architectural Association). (*b*) An R.I.B.A. (Archibald Dawnay) Scholarship of £50 for the year 1926–1927 to W. R. Brinton (School of Architecture, Architectural Association).

(ii) *First Year of Scholarships.*—(*a*) An R.I.B.A. (Archibald Dawnay) Scholarship of £75 for the year 1926–1927 to C. W. Preston (School of Architecture, Architectural Association. (*b*) An R.I.B.A. (Archibald Dawnay) Scholarship of £50 for the year 1926–1927 to E. B. O'Rorke (School of Architecture, Architectural Association).

Studentship.—The following were elected as Students of the R.I.B.A. :—

H. Bramhill, Liverpool (Univ. of Liverpool).
A. D. R. Cowley, Cheshire (Univ. of Liverpool).
A. J. Davidson, Sefton Park, Liverpool (Univ. of Liverpool).
R. Dilworth, Moss Side, Manchester (Special Exemption).
R. G. Grice, Bootle, Cumberland (Univ. of London).
Amy M. Hargroves, Golders Green, N.W.11 (Univ. of London).
G. C. Hough, Hoylake, Cheshire (Univ. of Liverpool).
J. L. Hughes, Wavertree, Liverpool (Univ. of Liverpool).
Abdulla M. Peermahomed, c/o Architectural Assoc., 34, Bedford-square, W.C.1 (Architectural Assoc.).
H. H. Powell, New Brighton, Cheshire (Univ. of Liverpool).
A. Sleigh, W.C.1 (Architectural Assoc.).

University of London Architectural Education Committee.—Mr. Arthur Keen and Mr. Maurice E. Webb were re-nominated as representatives of the R.I.B.A. on the University of London Architectural Education Committee for the year 1927–1928.

The Architects' Defence Union.—The Council agreed to lend an additional sum of £100 to the Architects' Defence Union for organisation expenses.

Membership.—Applications for Membership were approved as follows :—Fellowship, 19 applications ; Associateship, eight applications ; Hon. Associateship, one application ; Hon. Corresponding Membership, three applications.

The Smithson Drawings.—On the recommendation of the Literature Standing Committee it was decided to purchase the Smithson drawings for the Library and to call the collection "The Grissell Collection of Smithson Drawings."

Resignations.—The following resignations were accepted :—Mr. M. S. R. Adams, A.R.I.B.A., Mr. T. S. Darbyshire, A.R.I.B.A.

SIR JOHN VANBRUGH'S DESIGN FOR THE COMPLETION OF GREENWICH HOSPITAL

BY ARTHUR T. BOLTON, F.S.A.

THE special exhibition this summer, in the Architectural Library of Sir John Soane's Museum in Lincoln's Inn-fields, of drawings and sketches relating to an early design by Sir John Vanbrugh for the completion of Greenwich Hospital, having aroused much interest, the proprietors of *The Builder* commissioned Mr. T. Raffles Davison to make the drawing, which we illustrate this week and which gives a pictorial representation of the general effect of the design, as it might have been, if carried out in the days of Queen Anne. The scale is so vast that it must be explained that the diameter of the main order is half as large again as that of St. Paul's. The actual width of the centre portico is the same as the great decostyle of University College in Gower-street. The oval forecourt is roughly 360 by 230.

If, however, we transport ourselves back to 1702, the year of Queen Anne's accession, the design will not appear fantastic. Castle Howard and Blenheim illustrate the temper of the time, when the power of Louis XIV was being boldly challenged and broken.

The rise of Sir John Vanbrugh presents analogies with that of Wren himself a generation earlier. There is reason to think that King William, reputed as a great judge of men, very early recognised the genius of Vanbrugh. It is well known how he insisted on the employment of Marlborough, in spite of detected treachery, realising his military gift. It is doubtful if Wren, who had been the favourite of Queen Mary, ever really stood in the same relation with Anne. Vanbrugh belonged to the Marlborough group, and it seems early to have been decided to bring him into the Office of Works as a possible successor to the Surveyor, now some 70 years of age.

The greatness of mind of Wren is revealed as much in his relations with the men of his time as in his works. The idea of jealousy between the two men, young and old, may be disregarded, and we may believe that Wren, realising the similarity of his own incursion into architecture, freely recognised the genius of Vanbrugh. The circumstances of the time tied Wren closely to the long-delayed completion of St. Paul's, besides the unending attendance on the Privy Council, Treasury and Office of Works. There was, therefore, very good reason why Wren should be content to let Vanbrugh and Hawksmoor carry on at Greenwich under his general authority. If, accordingly, the buildings at Greenwich are studied with a fresh eye it must be clear to whom the work as it stands is mainly due. The writer has been drawn into the subject of Greenwich Hospital, as part of the programme of the Wren Society, as a volume of drawings will be devoted to it in 1929.

The subject is admittedly very complicated. The great scheme illustrated in Mr. Raffles Davison's drawing has been restored from some fragmentary drawings, only identified by a happy guess, though now fully confirmed as to subject. In point of date there is a narrow margin between 1702 and, say, three years before 1715. The latter date is that of the publication of "Vitruvius Britannicus," by Colin Campbell, whose work must have taken two or three years to produce.

Colin Campbell does not give this design, but a much simpler version, an isolated domed chapel without forecourt. Most significant of all, he mentions no architect's name, whereas in giving his plates of Blenheim he thanks Vanbrugh for the loan of his drawings and for his having besides corrected the copper plates to the work as built. Obviously Campbell knew perfectly well that Vanbrugh and Hawksmoor were carrying on Greenwich under the general authority of Wren as Surveyor-General. One of the most important features of the case is that we can now place Vanbrugh in such a relation to the school that Wren had got together during his generation, that it becomes possible to understand how Castle Howard and Blenheim could have been built in any reasonable time and in a practical manner.

This year's (1927) volume of the Wren Society, in dealing with Hampton Court, will give a series of documents illustrating Wren's relations with his staff, and it may be suggested Vanbrugh was a pupil of even more independence than usual.

The subject is most attractive, and in conclusion it may perhaps be explained that the radial buildings in the illustration comprise four wards with houses for officers, &c. The two fountains have been introduced, taking a design for a monument—to the victory of Blenheim (?)—as a basis. The lay-out of the paving of the forecourt follows good examples. Only the west elevation of the chapel existed, half-drawn, and there was no section. The central feature is a development of a rough sketch. Everybody must be struck with the general analogy of the grouping of the long lines of the oval court, and the central raised mass of the portico of the antechapel with the general lines of Castle Howard of the same date.

REGISTRATION OF ARCHITECTS

THE Registration Bill having been unanimously adopted at the R.I.B.A. meeting on December 13, steps are now being taken to obtain from Members of Parliament a promise of support and an undertaking to ballot for the Bill on the re-assembling of Parliament on February 8, 1927. The Registration Committee is inviting the allied societies to co-operate by taking immediate action on the following lines:

(*a*) To approach all the Members of Parliament in the constituencies in their areas, sending them copies of the Memorandum to M.P.'s (a copy of which we have received), and of the Registration Bill.

(*b*) To send to the Registration Committee before January 17, 1927, a list of the Members of Parliament who have been approached, with a note of the results whether favourable or unfavourable, and of any promises to ballot for the Bill.

The Memorandum points out that the Bill is a measure in accordance with the general policy of other countries and of our own Dominions, and will not interfere with anyone at present in *bona fide* practice as an architect. It is also urged that it will be a potent factor in the movement for preserving the amenities of our towns and countryside. "The recent formation of the Council for the Preservation of Rural England," it is stated, "and the suggestions which have been made in connection therewith, are a proof of the necessity for creating and maintaining a body of competent architectural practitioners, to any of whom local authorities and other public bodies or individuals can turn for advice and assistance in carrying out town and regional planning schemes, thus securing the preservation of the countryside and the prevention of its spoliation by the eyesores now being erected in such numbers. The public who are so keenly interested in this matter at the present time will undoubtedly welcome the Architects' Registration Bill as a measure which will benefit the community."

The Memorandum is signed by Mr. E. Guy Dawber, F.S.A., President of the R.I.B.A., and by Messrs. H. S. Rogers, M.A., F.S.A. F.R.I.B.A., President of the Berks, Bucks and Oxon A.A.; Holland W. Hobbiss, A.R.I.B.A., President of the Birmingham A.A.; E. F. Hooper, L.R.I.B.A., President of the Devon and Cornwall Architectural Society; Sir William W. Portal, Bart., M.A., Hon. A.R.I.B.A., President of the Hampshire and Isle of Wight Association of Architects; Col. Albert E. Kirk, O.B.E., A.R.I.B.A., President of the Leeds and West Yorkshire Architectural Society; Edward T. Allcock, F.R.I.B.A., President of the Leicester and Leicestershire Society of Architects; Prof. C. H. Reilly, O.B.E., M.A., F.R.I.B.A., President of the Liverpool Architectural Society; H. S. Fairhurst, F.R.I.B.A., President of the Manchester Society of Architects; E. T. Boardman, F.R.I.B.A., President of the Norfolk and Norwich Association of Architects; J. W. Fisher, F.R.I.B.A., President of the Northamptonshire Association of Architects; Lieut.-Col. G. Reavell, O.B.E., F.R.I.B.A., President of the Northern A.A.; H. A. Dickman, F.R.I.B.A., President of the Nottingham and Derby Architectural Society; G. P. K. Young, F.R.I.B.A., President of the Incorporation of Architects in Scotland; James B. Nicol, President of the Aberdeen Society of Architects; T. M. Cappon, F.R.I.B.A., President of the Dundee Institute of Architects; F. C. Mears, President of the Edinburgh A.A.; Jas. K. Hunter. F.R.I.B.A., President of the Glasgow Institute of Architects; Thomas Munro, President of the Inverness A.A.; F. E. Pearce Edwards, F.R.I.B.A., President of the Sheffield, South Yorkshire and District Society of Architects and Surveyors; C. F. Ward, F.R.I.B.A., President of the South Wales Institute of Architects; John Seeds, President of the Ulster Society of Architects; George C. Lawrence, R.W.A., F.R.I.B.A., President of the Wessex Society of Architects; C. F. W. Dening, R.W.A., F.R.I.B.A., President of the Bristol Society of Architects; Col. N. H. Waller, M.C., M.A., L.R.I.B.A., President of the Gloucestershire A.A.; J. M. Dossor, F.R.I.B.A., President of the York and East Yorkshire Architectural Society.

Voluntary Register of "Unattached" Architects.

The Registration Committee of the R.I.B.A., with the approval of the Council, has opened a voluntary register of persons who, not being members of the R.I.B.A. or of any of its Allied Societies, desire to have their registration qualifications recorded in view of the intention of the R.I.B.A. to promote a Bill for the Registration of Architects. The object of the voluntary register is to provide and maintain, with the registers of the R.I.B.A. and of its Allied Societies, a complete record of persons in *bona fide* practice as architects, either as principals or assistants, in England, Scotland, Wales, and Northern Ireland.

While there is no charge for record in the register and such record does not involve any obligation on the part of the persons registered, or the R.I.B.A., or the Registration Committee, the existence of such a register in the event of a Registration Act coming into force in this country will, it is pointed out, greatly expedite and facilitate the machinery of registration. The register will be subject to revision and amendment from time to time and the Registration Committee reserves the right to discontinue the system of voluntary registration at any time, and in the event of a Registration Act coming into force the voluntary register will be discontinued.

Particulars for record in the register should be entered on one or other of the forms which have been issued, which, when filled in and signed by the applicant, should be deposited with the Secretary of the R.I.B.A. Registration Committee, at 28, Bedford-square, London, W.C. 1.

Seventeenth-Century Gateway.

A stone gateway from Ascott Park, Stadhampton, Oxfordshire, the gift of Sir Paul Makins, has just been installed in the Victoria and Albert Museum. The gateway, which is early seventeenth century, was originally provided with wooden gates, which, having rotted, were replaced by the present eighteenth-century gates and lunette in wrought iron. The gates were built into a stone archway let into a brick wall. The stone setting and the remains of the brick wall also have been preserved and set up in the Museum. There is an inscription on the stone archway: *Si bonus es intres, si nequam nequaquam.*

Greenwich Hospital.

An article on the Greenwich Hospital illustration (insct), by Mr. Bolton, is given on page 9.

The Spa Royal Hall, Bridlington.

The building of the new Royal Hall at the Spa, Bridlington, was begun on January 15, 1926, and the Hall was opened to the public on July 15. Out of this period of six months, six weeks were occupied in the preparation of the foundations which, owing to the nature of the site, necessitated the driving of 150 piles through the sand and clay to an average depth of 25 ft., until reaching the chalk sub-stratum. At the date of the opening the whole contract was not entirely completed, but for all general purposes the buildings were complete, the main hall itself being entirely finished and even the decorations carried out.

The foundations are of reinforced concrete constructed above the piling already mentioned. Built up from this foundation work is a steel framework for the hall, which arrangement enabled the steelwork to be carried out at the same time as the walling was being constructed. The steelwork to the building amounted to 240 tons, and was carried out complete from the date of the order, including all preparation and erection, in ten weeks. The walls throughout are of the cavity type, concrete brick being used externally and silica bricks internally, tied together with wall ties. This class of brick was used in the building by reason of the Government embargo on the use of ordinary bricks as a condition in connection with the granting of a loan for this type of building. Externally the whole of the walling is treated with stucco facing. A plinth of unpolished granite is provided to a height of 18 in., to obviate the otherwise dirty appearance usually found in stucco work carried down to the ground.

Internally the walls are plastered and finished in an enriched fibrous plaster treatment. The centre of the ceiling has been made a special feature by means of a steel-framed dome, 36 ft. in diameter, glazed with leaded lights.

The balcony is carried out in steel construction, with the flooring of pre-cast concrete beams, floated up with an asbestos composition and finally finished with "Duroleum." The terrace of the ground floor, immediately below the balcony is similarly treated. The dance floor is constructed on the "Valtor" spring system, provided with locking gear, so that it may be made stable when the hall is being used for concerts. The dance floor itself is formed of 3 in. by 1 in. maple flooring with mitred angles. When the hall is used for concerts the whole of the maple floor is covered with a canvas material. The floors of the foyer, crush halls, cloakrooms and lavatories are all carried out in terrazzo.

The whole of the fittings are of wire network covered with painted fabric. The lamps inside this fabric are of different colours wired independently, the wiring being so arranged as to provide thirty-two different combinations of colour effects. A special switchroom is provided in connection with the lighting and all the lights are arranged through dimmers. Two limelight boxes are also provided, the projection of the limelights being from the two side walls and near the ceiling level, and so arranged that the lights will cover the whole of the dance floor. The heating is carried out on the low pressure hot-water system, and an independent boiler is provided for the hot water supply to the lavatories. All exposed woodwork is carried out in French polished mahogany.

It was decided that the orchestra platform and the musicians' room should be carried out so as not to form part of the structure of the building and that the platform should stand out in the hall itself giving the appearance of a large piece of furniture. The whole structure is carried out in polished mahogany.

The whole of the purlin constructed framework of the roof is covered with grooved and tongued boarding and then with a special felting, all the joints being ironed so as to make the entire roof watertight. The roof covering is completed by lathing over the felting and finally covering with russet brown asbestos tiles laid with square joints as in ordinary slating.

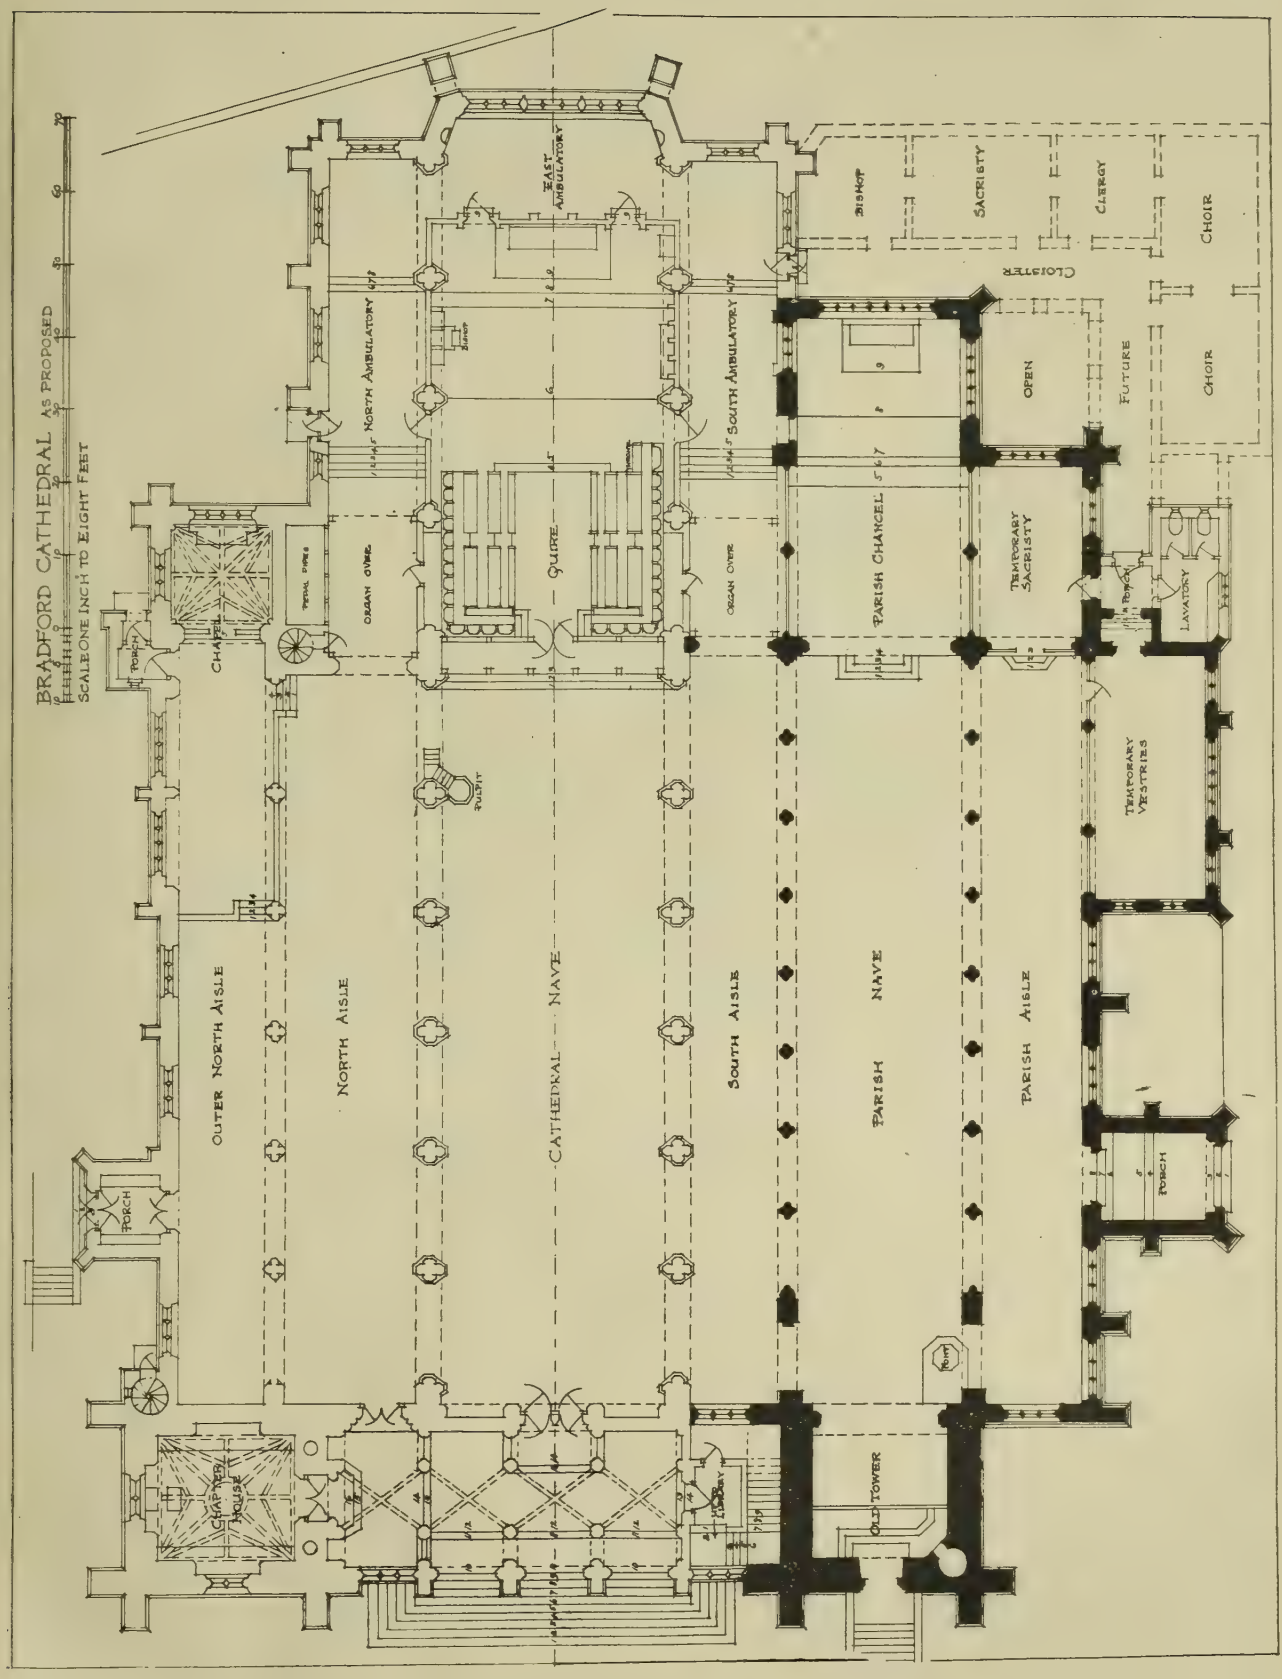
A feature of the front elevation overlooking the sea is the series of large steel windows which have been specially constructed to withstand the weather and stress of the storms which are experienced on this front. Each window contains 1½ tons of steel. The windows are glazed with British polished plate glass. Portions of the balcony and ground floor terrace are used as a cafe, and kitchens are located on the ground floor adjacent thereto, with the ground floor and balcony service rooms connected up with two electric service lifts. Offices and other staff rooms are provided in connection with the scheme.

Messrs. Blackmore, Sykes & Co., of Hull, are the architects.

Messrs. Holliday & Barker, of Hull, were the general contractors, and the following were sub-contractors: G. R. Jarvis & Sons, Bridlington, plumbers and glaziers; W. J. Wilson & Son, Mansfield, fibrous plaster work; Geo. Jackson & Sons, Ltd., London, external cement facing; City Electrical Co., Hull, electric wiring and installations; Walter Dodgson, Bridlington, slating to roofs; Kenneth Haller, Hull, painting and decorating; Samuel Butler & Co., Ltd., Leeds, constructional steelwork; Concrete, Ltd., Leeds, concrete pre-cast floors; Trussed Concrete Steel Co., Ltd., Kensington, reinforcing steel for retaining walls, &c.; Richard Hill & Co., Ltd., Middlesbrough, reinforcing steel for floors, &c.; Crittall Manufacturing Co., Ltd., Manchester, standard steel casements; Doodson & Bain, Ltd., Manchester, steel windows; Henry Hope & Sons, Ltd., Birmingham, lantern lights; Kayll & Reed, Leeds, ornamental dome and ceiling lights; A. J. Snelling & Co., Ltd., Hull, heating installation; Hollis Bros. & Co., Ltd., Hull, maple floor to main hall; Francis Morton, Jnr. & Co., London, spring floor installation; Doulton & Co., Ltd., Paisley, sanitary fittings (w.c.'s); William E. Farrer, Ltd., Birmingham, sanitary fittings in lavatory basins, urinals and w.c.'s; Goddard, Walker & Brown, Hull, fireproof door frame (John Tann door); Marble Mosaic Co., Ltd., Bristol, terrazzo floors; Northern Asphalt Co., Ltd., Leeds, asphalting to roofs; The Pennycook Patent Glazing Co., Ltd., Glasgow, patent glazing; Excelsior Rubber & Flooring Co., Ltd., Yorkshire, "Duroleum" flooring; Express Lift Co., Ltd., Westminster, service lifts; Fassio Artificial Marble, London, artificial marble work to foyer; Artistic Shade Co., London, electrical shades; Leeds Fireclay Co., Ltd., Hull, wall tiling Mateer, Dunn & Nelson, Hull, locks, door and window furniture, spring, &c.; King & Co., Ltd., Hull, turnstile and collapsible gates; Rd. Johnson & Sons, Ltd., Hull, bronze tablet recording opening ceremony; Raines & Porter, Ltd., Hull, "Velmat" oil flat paint; Sissons Bros., Ltd., Sculcoates, Hull, "oil flat" paint; Sangwin, Ltd., Sculcoates, Hull, piling works; Shackleton & Son, Goole, granite plinth; National Radiator Co., Ltd., Hull, radiators and boilers for heating apparatus; Horace Mills, Ltd., Durham, seating.

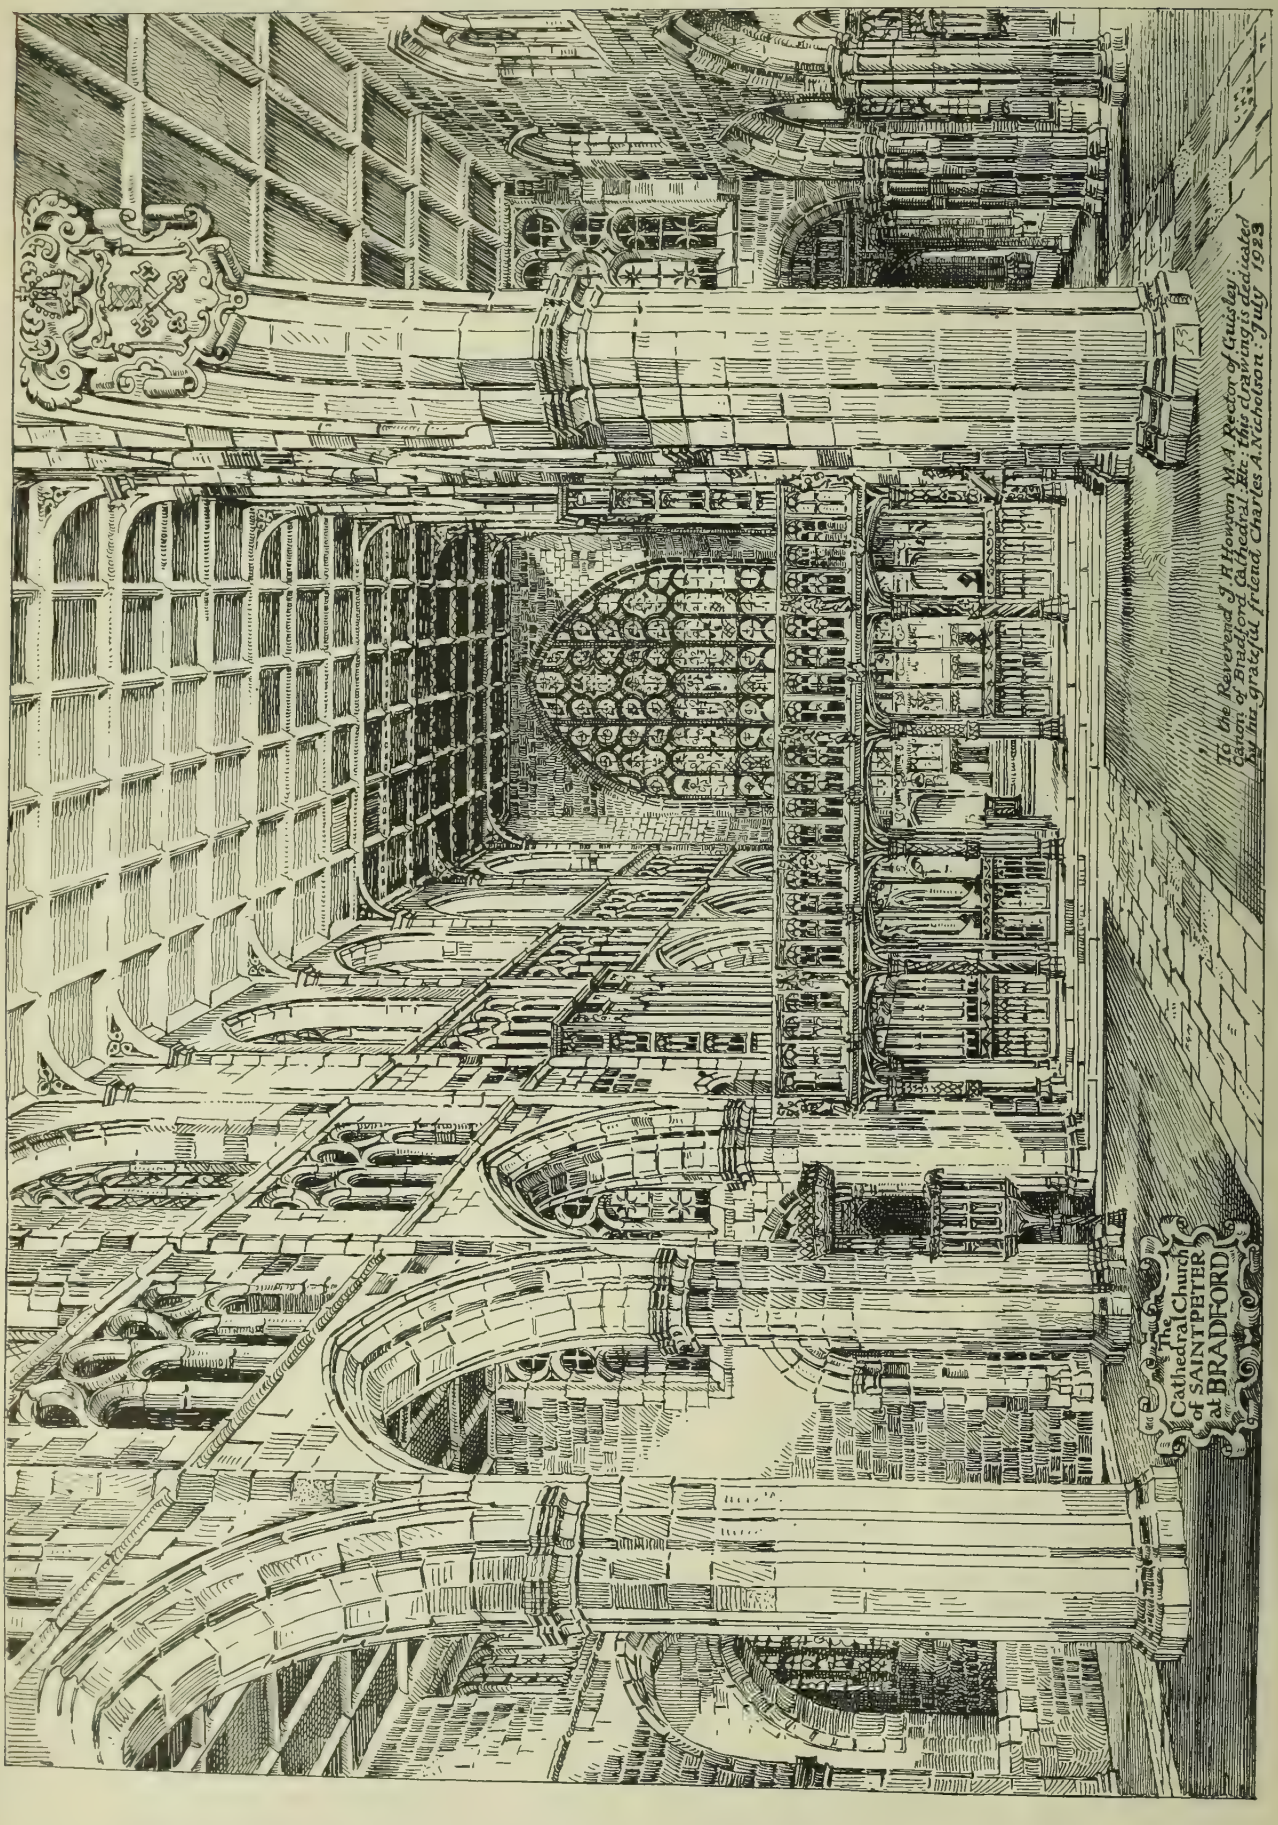
Bradford Cathedral.

We publish in this issue some drawings illustrating Sir Charles Nicholson's proposals in connection with the provision of a new Bradford Cathedral. It was fully recognised before the Bradford Bishopric was founded seven years ago that the old Parish Church was not adequate for diocesan purposes. To all intents and purposes it is still the Parish Church. The Vicar desires to establish for the diocese a church which shall be a cathedral both in name and fact, and which shall be comparable with the great cathedrals of the country. It should be specially pointed out that the present building—other than the demolition of the north wall—will exist as it is now in the new Cathedral; it will simply be incorporated in the greater structure without losing its identity. To carry out the scheme it will be necessary to raise a sum of between £150,000 and £200,000.



New Factory, Wembley.

This factory, which has been designed for Messrs. Wm. Wrigley Jr. Company, of Chicago, U.S.A., constitutes something of a record in speed of design, in that within four weeks of the arrival of Messrs. Wrigley's representative from America, a site had been selected, plans drawn up, quantities prepared, builders' estimates obtained, and a start actually made on the work. The construction of the building is reinforced concrete on the mushroom principle. A portion of the large floor area is to be finished in maple flooring. All the lavatories are to be finished with glazed tiles. In designing the building great care was taken to see that the process of manufacture was carefully arranged to provide a direct route through the building from the receiving department for raw material to the despatch department. The building is served by sidings from the main line with all up-to-date equipment for loading and unloading.



The building work is being carried through by Messrs. A. Roberts & Co., Ltd., contractors, of Earl's Court-road, Kensington, under the supervision of the architects, Messrs. Wallis, Gilbert & Partners, of 29, Roland Gardens, S.W.7, assisted by Wrigley's own engineer, Mr. Wilson. The sub-contractors are: Henry Hope, sashes; Dutton & Co., heating; Carrier Engineering Co., conditioning and engineering; Trussed Concrete Steel Co., Ltd., reinforced steel; Limmer & Trinidad Lake Asphalte Co., Ltd., asphalt; Adam & Co., waterproofing; Haywards, Ltd., castings.

Timber-Framed Houses.

We give plans and elevations this week of a block of four two-story houses erected on the L.C.C. estate at Wood-lane, Becontree. Each of these timber-framed houses contains a living-room, scullery and three bedrooms. The framing of external walls is composed of studding erected at the level of the ground floor window sills on a concrete plinth. The partitions on each floor are framed up in studding, while party walls are constructed in 9 in. concrete. Externally the studding is first covered with a sheeting of impervious felt; and weatherboarding, treated with a non-inflammable Stockholm tar preparation, is then nailed through to the studs, and the roof is covered with interlocking tiles. The contractors were Messrs. C. J. Wills & Sons, Ltd., who built to the designs of Mr. G. Topham Forrest, F.R.I.B.A., Chief Architect to the London County Council.

CONSTRUCTIONAL STEELWORK SIMPLY EXPLAINED.—XVI

By OSCAR FABER, O.B.E., D.Sc., M.Inst.C.E., etc.

[EDITORIAL NOTE.—*This series, which will be published in book form later, is intended to present the problem in so simple a form as to be readily understood by those having no special engineering training.*]

CONNECTIONS.—Structural members are connected by fasteners containing either rivets or bolts. The ordinary rivet has a snap head, as shown in Fig. 42. A hole is drilled through the sections requiring to be riveted, and the rivet, as in Fig. 42 (*a*), is inserted, having previously been raised to a red heat. It is then "closed" until it adopts the form in Fig. 42 (*b*). In works this "closing" is generally done by a hydraulic press, taking the form of a

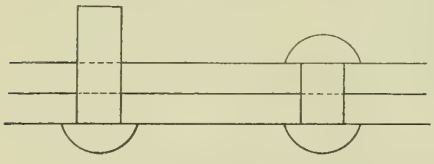

FIG. 42.—SNAP-HEADED RIVETS.

heavy casting of cranked form supporting two cup-shaped jaws, one fixed and the other so arranged that it can be pressed towards the other with a force of about 20 tons exerted by hydraulic pressure, the gap between the two being sufficiently wide to enable ordinary structural sections to be inserted.

On the site this method of closing rivets has practical difficulties, as it requires hydraulic pumps, accumulators and piping to the various portions of the job, and the hydraulic riveter itself is naturally a heavy casting, which can only be carried by a crane. For this reason, rivets on site are generally closed either by hand or with a pneumatic hammer. In either case a large number of blows are delivered on to a cup-shaped tool on the shank of the rivet, the head being, of course, held by a heavy hammer on the other side.

The rivet expands considerably when heated, and it is usual to make the holes $\frac{1}{16}$ in. larger in diameter than the rivet, so that it will easily pass through when hot, thus a $\frac{3}{4}$-in. rivet has $\frac{13}{16}$-in. holes. When the rivet is closed, the first action is to shorten the rivet and make it expand laterally so that it completely fills the hole. After that the energy goes in forming the head. The rivet then cools and, in cooling, contracts and becomes shorter. In so doing it naturally grips very tightly the plates which it is riveting together and produces a great deal of friction between them, which resists relative movement of the plates, quite apart from the shearing strength of the rivet itself.

If we rivet two plates together, as in Fig. 43, and subject these plates to tension in a testing machine, failure occurs by shearing of the rivet, the rivet after failure taking up the form as in Fig. 43 (*b*). It is found that resistance to failure of this kind is directly proportional to the cross-sectional area of the rivet.

For rivet steel we use a relatively soft material, in which the safe shear strength may be taken at $5\frac{1}{2}$ tons per sq. in., so that a $\frac{3}{4}$-in. rivet, having a sectional area of .44 sq. in., will have a shear strength of

$$.44 \times 5\tfrac{1}{2} = 2.4 \text{ tons.}$$

This takes no account of the friction between the plates which is set up by the tension in the rivet produced by its shortening. The amount of this tension depends on a variety of factors, including the temperature of the rivet when it was closed, whether the plates were touching hard or separated by a small space, as sometimes happens owing to a certain spring in them, and whether the rivet was kept closed in the hydraulic ram for a second or two during cooling, which tends to increase the tension in it. If we take the tension in the rivet at 11 tons per sq. in. and the coefficient of friction as $\frac{1}{4}$, then for each square inch of rivet there will be an additional 2.75 tons resisting movement of the plates owing to the friction between them. In this country it is not usual to make any allowance for this friction, but it often accounts for considerable discrepancies between the strength of riveted joints when tested as compared with the strength that we should expect them to give on a basis of the shear strength of the rivet alone.

In the case of rivets which are very long compared with their diameter, the shrinkage of the rivet when cooling may produce tensile stresses so great as to break the rivet, and it is unusual to use rivets longer than five times its diameter. For greater lengths than this, bolts carefully fitted to the holes are generally substituted in first-class work.

The rivet in Fig. 43 will break on a single section, and is therefore said to be in *single shear*. Occasionally, as in Fig. 44, a rivet may be in double shear if the two outer plates are pulling in one direction and the middle plate pulling in the opposite direction. Such a rivet after failure would be as in Fig. 44 (*b*). It requires approximately twice the effort to break a rivet in double shear as compared with single shear, but most regulations require that the strength of a rivet in double shear shall be confined to $1\frac{3}{4}$ the strength in single shear, so that a $\frac{3}{4}$-in. rivet in double shear would carry safely

$$2.4 \times 1\tfrac{3}{4} = 4.2 \text{ tons.}$$

If relatively large rivets are used to rivet together relatively thin plates, it may happen that the force required to shear the rivet is greater than the pressure which the plate will take against the area of the hole without failure of the plate; thus, in Fig. 44 (*b*), if the centre plate is $\frac{1}{2}$ in. thick and the rivet $\frac{3}{4}$ in., the rivet would bear against an area of

$$\tfrac{3}{4} \text{ in.} \times \tfrac{1}{2} \text{ in.} = \tfrac{3}{8} \text{ sq. in.}$$

The total force of 4.2 tons on the rivet would therefore have to be carried on this area, producing a bearing stress of

$$\frac{4.2 \text{ tons}}{\frac{3}{8} \text{ sq. in.}} = 11.2 \text{ tons per sq. in.}$$

Most regulations require this stress to be kept within the limit of 11 tons per sq. in. This is, of course, greater than we normally use on steel in compression, but it is recognised that where an intense stress is very local in its action and disperses rapidly, a greater stress can be allowed safely. Cases where bearing pressure becomes the limiting factors are more likely to occur with rivets in double shear than when they are in single shear, because the load on the rivet, and therefore on the plate, is proportionately greater.

The holes in plates to receive the rivets used to be made by punching. A plate, as in Fig. 45, would be supported on a die containing a circular hole, above which a punch somewhat smaller in diameter than the hole would be applied, and would be forced through the plate, taking with it a piece of the material from the plate, and leaving a hole through the plate of a slightly conical form. In work of low quality the author has seen several punch-holes assembled, as shown in Fig 45 (*b*), with the object of riveting without any further preparation. Even if it were

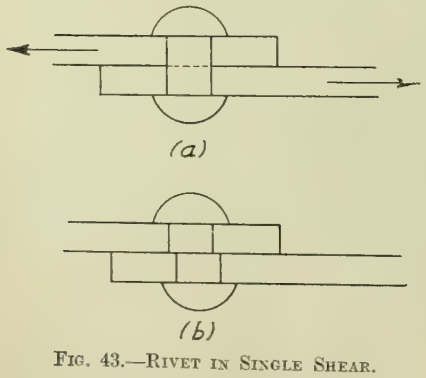

FIG. 43.—RIVET IN SINGLE SHEAR.

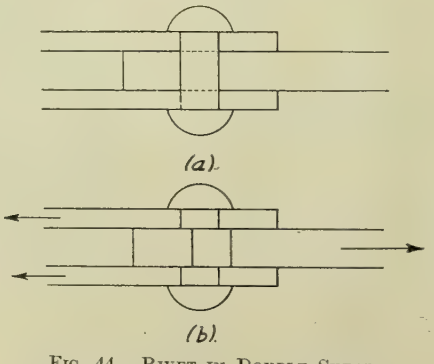

FIG. 44.—RIVET IN DOUBLE SHEAR.

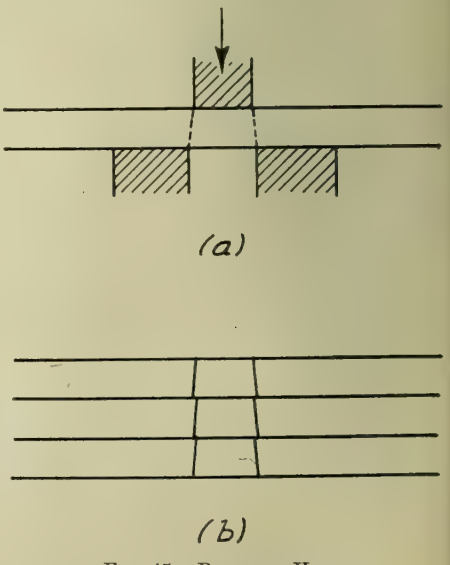

FIG. 45.—PUNCHED HOLES.

possible to make a rivet fill such a hole, a rivet of this shape would be much weaker, because it is found that a member in tension is much weakened by sudden variations of sectional area, the curves of stress requiring to flow in gentle stream lines if high loads are to be carried, and any sudden deflection of stress being always accompanied by an intense concentration of stress.

It is also found that the process of punching, which of course produces intense over-straining at the surface of the punched hole, causes intense hardening of the material round this hole, which therefore loses the valuable properties of ductility possessed by the remainder of the section, so that when the specimen is tested in a testing machine the rest of the section begins to yield, but the hard steel surrounding the hole is unable to yield, and therefore tends to carry the whole load until it breaks down with the formation of a crack.

It is found, in fact, that the hardening of the steel round the hole due to the process of punching makes a steel section much weaker, and for this reason, wherever punching holes have been used, it is required in good practice that the material round the punched hole shall be removed by the process of reamering. Old-fashioned practice in assembling the various plates that go to make up one flange of a girder was to prepare a wooden template with the holes drilled, and from this to make the various plates individually, the holes in these plates then being individually made either by punching or drilling, and the plates subsequently assembled on top of each other. It was therefore quite common to find that while there was a general alignment of the holes, considerable variations of an irregular nature might occur, as shown in Fig. 46. This would, in extreme cases, be improved

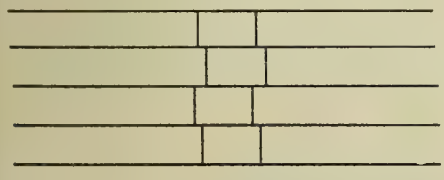

FIG. 46.—NON-ALIGNMENT OF HOLES DUE TO SEPARATE DRILLING OF PLATES.

by reamering, but the result can never be a really satisfactory one.

In high-class modern work, structural members of this kind are drilled through all the plates in a single operation. The usual tool for this purpose is a set or battery of radial drilling machines, enabling a single man to watch and control the drilling of about six holes through the same girder simultaneously. With this process all the plates in the girder are assembled together and clamped, and the drills then pass through all the plates in a single operation. Besides making a very much better job, it is found to be no more expensive in the long run than the other process.

When the structural members are first erected, a temporary connection is made with field bolts, which in good work are subsequently removed a few at a time and replaced with rivets. For some classes of work, bolts are used permanently for the field connections in place of rivets, and it is frequently more convenient to the steel contractor. Bolts are, however, not so strong as rivets of the same size, nor do they give to a job the same strength and rigidity as is obtained with rivets.

As compared with rivets, bolts have the following disadvantages:—

(1) The ordinary black commercial bolt does not fit the hole.

(2) Whereas a rivet is of full section from end to end, a bolt is reduced very considerably in size at the bottom of the thread. Thus a ¾-in. bolt, having an area of .44 sq. in., only has an area of .3 at the bottom of the thread. The disadvantage of bolts as compared with rivets is increased in cases where a load has to be taken by a group of bolts or rivets.

In the case of rivets which accurately fill their holes, the load will generally be shared between all the rivets of a group equally, whereas with bolts which do not fill their holes it will generally be found that some of the bolts make contact and begin to carry the load before others, so producing unequal distribution, and therefore an increased stress on the bolts which carry the load first, which may result in progressive failure. For these reasons bolts are much inferior to rivets for structural work, and the author would consider a 1-in. bolt required to replace a ¾-in. rivet. It must also be remembered that a ¾-in. rivet really becomes 13/16 in. diameter, though no allowance is usually made for this in the calculation of its strength. Obviously no such margin is available in the case of bolts.

While it is desirable that the size of rivets should have regard to the size of the members connected, it is, for practical reasons, of great importance to standardise a job for a single-size rivet as far as possible, as the riveters proceeding from joint to joint would be seriously inconvenienced if they had to carry appliances for many sizes of rivets and pick out rivets of various sizes from the same stove for feeding various joints.

The ¾-in. rivet is the one most generally suited to structural work of ordinary size, and is generally adopted as a standard. It is varied from only in the case of such members where there is some strong reason for varying. In some heavy girders, for example, it may be found that the maximum number of ¾-in. rivets which can be inserted at the proper spacing, consistent with not too greatly weakening the plates, will not give the shear strength necessary. In such cases 1-in. rivets are generally adopted.

It frequently happens that with large gusset plates in the bases of stanchions where very heavy loads have to be transmitted, that the gussets would have to be inordinately long, with ¾-in. rivets, and can be reduced in size when 1-in. rivets are adopted. In both these cases the variation from standard takes place with rivets closed at the works, where the objections to varying the size are not quite so great as on the job.

Bolton War Memorial Site.

The controversy between the Bolton War Memorial Committee and the Streets Committee of the Corporation as to the site of the proposed war memorial was settled at the last meeting of the Streets Committee, when the Victoria-square site was approved. Mr. A. J. Hope, the architect for the memorial, submitted drawings of a modified scheme, and having examined them the Streets Committee recommended that no objection be raised to the proposals

SOCIETIES AND INSTITUTIONS

THE INCORPORATED ASSOCIATION OF ARCHITECTS AND SURVEYORS.

Election of Council for 1927.

The following new Council of this body has just been elected:—

R. Beryl, B.A., B.Sc. (London), Chairman of the Publications Committee.
F. E. R. Bicknell (Bradford), Chairman of the Education Committee and Board of Examiners.
W. H. T. Brewer (Messrs. Ford & Brewer) (London), Chairman of the Applications Board.
Vincent Burr (Messrs. Alfred & Vincent Burr), (London).
W. Forbes Campbell (London), First President I.A.A.S.
A. Casse, F.S.I., &c. (Surrey).
L. Redgrave Cripps (Sussex).
A. W. Curtis (Messrs. Robert Angell & Curtis) (London).
W. J. Furbur (Messrs. Thornely & Furbur) (Liverpool).
W. R. H. Gardner (Kent).
R. Stanley Gledhill (Messrs. Gledhill & Wigmore) (London), Chairman of the Finance Board.
O. R. Goodman (London).
R. V. Hall, M.I.M. & Cy.E., &c. (Berkshire).
H. A. Heath (London), Chairman of the Club and Social Committee.
J. H. Hirst, F.R.I.B.A. (Hull).
V. A. Lawson, A.M.I.C.E.
A. Leitch, M.I.M.E., &c. (London).
Andrew Mather, L.R.I.B.A. (London).
V. S. Peel (Birmingham).
J. B. Robinson, M.R.I.A. (Ireland).
F. G. Sainsbury, L.R.I.B.A. (Reading).
C. S. Spackman, R.B.A., Art Adviser to the Association.
R. I. Tasker, M.P., &c.
C. H. Taylor (London), Chairman of the Executive Committee.
E. G. Timbrell, A.C.G.I., &c. (Crewe).
W. T. Bowman, O.B.E., &c. (Middlesex).
W. J. Goode, M.I.M. & Cy.E., &c. (Cumberland).
F. R. Gray, F.I.S.E., &c. (Isle of Wight).
A. O. Marshall, M.I.M. & Cy.E., &c. (Staffordshire).
J. Ellis Middleton, A.M.I.C.E., &c. (Blackpool).
H. F. V. Newsome (Manchester).
W. S. Rumsby (Messrs. Rumsby & Rodd), P.A.S.I. (Bournemouth).
A. E. Starkey, L.R.I.B.A. (Portsmouth).
P. H. Warwick, M.I.M. & Cy.E. (Canterbury).

THE ULSTER SOCIETY OF ARCHITECTS

The twenty-fifth annual general meeting of the Ulster Society of Architects was held recently in the rooms of the society, Scottish Provident Buildings, Belfast, the president, Mr. John Seeds being in the chair. The report and statement of accounts, which showed a record year of progress, were adopted, on the motion of Major James Ferguson, seconded by Mr. D. W. Boyd. In a discussion on the work of the society, in which the president, Major Ferguson, Mr. R. I. Calwell, Mr. C. Love, and Mr. R. H. Gibson took part, the following subjects were reviewed:—Registration of local building by-laws, town planning, and the general question of the spoliation of the countryside.

The election of officers for the year 1927 resulted as follows:—President, Mr. John Seeds; vice-president, Major J. Ferguson; hon. treasurer. Mr. Thomas Eagar; hon. secretary, Mr. R. H. Gibson; council, Messrs. D. W. Boyd, R. I. Calwell, E. R. Kennedy, E. O. Neill, J. P. M'Grath, J. G. Smyth, and D. W. Warne.

Westminster Bank Limited.

The directors of Westminster Bank Limited have declared a final dividend of 10 per cent. in respect of the £20 shares, making 20 per cent. for the year; and a final dividend of 6¼ per cent. on the £1 shares, making the maximum of 12½ per cent. for the year. The dividends will be payable (less Income Tax) on February 1.

THE FOUNDLING HOSPITAL

THE immense accession of values in London sites is already responsible and will be increasingly responsible for the sacrifice of many pleasant amenities of air and space. It has changed Regent-street from a pleasant thoroughfare bordered by structures which had an agreeable height in relation to the width of the street into a street which takes much away from the dignity and charm it once possessed. Historic sites are being used for purely commercial purposes, and in every direction we find it too costly to widen or improve thoroughfares. It is no wonder then that the Foundling Hospital and its beautiful site has attracted greedy attention, and some day, if such alleviative charms as the Foundling Hospital and its site and our beautiful tree-planted squares disappear, London will lose a charm and amenity that nothing can ever compensate us for. It is not surprising, then, to find a Foundling Estate Protection Association at 10, Mecklenburg-square, with Mrs. Cecil Chesterton as hon. secretary, and a distinguished list of presidents and vice-presidents. An admirably produced brochure has just been issued by the Association with graphic photographs of the Hospital and surroundings and an introduction by Professor Lethaby. "When the trees have been cut down and burnt, when the pleasant old buildings have been torn into rubbish and carted away, when the pieties and poetries have been exorcised and the site has been partitioned up and built over to yield what is called profit—what will it profit?" asks the professor. He writes:

"The Foundling Hospital is part and centre of the largest area of considered planning in the whole extent of London. On its destruction will follow the degradation of a district far larger than its own area, which, however, is considerable; and we must ask how far, in a great and ancient city, may these ancient amenities and civilities be sacrificed by some group of persons regardless of the larger and truer interests of the community? It should be clearly seen that the preservation or demolition of such a large historical part of the West Central district is not only a question concerning the Hospital itself, but that the whole neighbourhood of pleasant squares and terraces is quite tragically involved. If, for instance, as has been suggested, a vegetable market were brought here, the neighbourhood might soon decline into slumdom. The Hospital and its grounds form an island of ordered peace that sweetens a wide area, and is as a whole an example of the town planning we hear so much talk of, but see so little with our eyes. Its preservation is important, not only for Bloomsbury, but for London and England."

OBITUARY

HUGH TOWNSHEND MORGAN.

We regret to record the death, in the recent avalanche disaster in the Austrian Tyrol, of Mr. Hugh Townshend Morgan, A.R.I.B.A., of Gray's Inn-square. Mr. Morgan was born in Rome in 1884. He was educated at Bedales School and at the University College, London, where he was awarded the Donaldson Medal for Architecture. He was articled to Sir Reginald Blomfield, R.A., and during his articles attended the Royal Academy School. Later he practised in Westminster, and then in Gower-street, moving after the war to his present offices at 14, Gray's Inn-square. When the war broke out he enlisted in the Artists' Rifles, and later was given a commission in the Machine Gun Corps. He left the army soon after the armistice and resumed his interrupted practice. Though he has devoted most of his attention to domestic buildings, he has been successful in competition for public buildings, including (jointly with Mr. C. Cowles-Voysey, A.R.I.B.A.) the White Rock Music Pavilion at Hastings, and (jointly with Mr. Alan Brace) Endcliffe Park Church, Sheffield. Mr. Morgan was married during the war to the daughter of Sir Nestor Tirard, Emeritus Professor of Medicine at King's College, and has one daughter, aged 7.

LEONARD A. SHUFFREY.

We deeply regret to announce the death of Mr. Leonard A. Shuffrey, the well-known decorative artist and founder, with George Sherrin, of the business of Messrs. Shuffrey & Co., in Welbeck-street. Mr. Shuffrey was one of the earliest members of the Architectural Association, joining in 1871, and having among his fellow students Sir Aston Webb. He went into partnership with Sherrin in 1880, the firm specialising in the design and manufacture of objects required in interior decoration—wall papers, fire grates, chimney-pieces, plaster ceilings, tiles, &c., to be carried out under the patronage of architects. Mr. Shuffrey became a member of the Incorporated Institute of British Decorators in 1899, the year of its institution, under the presidency of J. D. Crace; and he was in turn a member of the council, vice-president, treasurer, and president. He read papers on "The Use of Relief Ornament," "The Position of the Decorator and His Craft," "The Treatment of Woodwork in Decoration," and "Chateaux of the Loire Valley." He also designed the Crace illuminated address. One of his most notable literary works was "The English Fireplace and its Accessories"—a book which is to be found in the library of most architects. Mr. Shuffrey designed and executed the plaster ceiling in the entrance of the dining-hall of the Painters' Company, and other works are war memorials for Witney Grammar School, Bloxham School, Oxon, and Walpole Park, Ealing. As recently as 1925 he was awarded the Gold Medal of the Incorporated Institute of British Decorators, of which only three had been previously awarded—to Sir William Richmond, R.A.; J. D. Crace; and Metford Warner. Mr. Shuffrey was an artist of real distinction, and to his artistic qualities was allied a most engaging personality. His death is the breaking of a link with a most interesting period of architectural development and is a real loss to architecture.

AMBROSE McEVOY.

We regret to announce the death of Mr. Ambrose McEvoy, A.R.A., at the age of 48. Born in 1878, he leaves a great legacy of portraiture, chiefly of beautiful women and famous men, scattered throughout the public galleries and private collections of the English-speaking world. He married in 1902 Mary Spencer, daughter of Colonel Spencer Edwards, of Freshford, Bath, and she survives him with a son and a daughter.

GEORGE CHARLES VERNON INKPEN.

The death has occurred at Southsea of Mr. George Charles Vernon Inkpen, architect, aged 70. Two months ago he was selected chairman of the South Wilts and Dorset section of the Surveyors' Institution.

The Late Mr. Walter Brierley.

Mr. Walter Henry Brierley, F.S.A., F.R.I.B.A., of Bishopbarns, St. George's-place, York, who died at Hove on August 22, 1926, aged 64, left estate of the gross value of £72,288, with net personalty £63,964.

The Foundling Hospital: Garden Pavilion.

TOWN PLANNING OF GREATER LONDON

Last week-end local authorities in the Greater London area received a letter from the Ministry of Health asking them to pass a resolution at an early date agreeing that it is advisable to appoint a committee to consider and make suggestions for the future planning of the area within a radius of 25 miles from Charing Cross. This includes something like 2,000 square miles. There were invited to a recent conference the representatives of some 154 local bodies, and virtually the whole of the invitations were accepted. In the letter now addressed to authorities it is stated that the Minister of Health is "convinced that the formation of a committee of this kind is urgently required if the problems connected with the development of London and the surrounding area are to be adequately considered. Without a comprehensive consideration of these problems by a body representative of the local authorities, he believes that it will be virtually impossible to avoid difficulties which, sooner or later, must involve the expenditure of large sums of money.

"It will be observed that the committee will be of an advisory character, and that it is proposed to limit its expenditure to the produce of a rate of 1-20th of a penny in the pound; this rate will be levied only by the town-planning authorities, so that there will not be two rates in the same district for the same purpose. The work of the committee will be to investigate the general problem and to formulate proposals for the consideration of the constituent authorities. The committee will not supersede the regional committees, but will help to co-ordinate their labours. After resolutions have been passed by the constituent authorities, the Minister will address a further communication to you as to the steps to be taken to appoint the representatives on the committee."

HOUSING SUBSIDIES

We quote here some extracts from Mr. Geoffrey Hutchinson's recent letter to the *Times* on the question of "Housing Subsidies." The letter runs:—"The speeches of Lord Henry Cavendish Bentinck and other supporters of the Government in the debate in the House of Commons on December 2 [reported in *The Builder* for December 10] on the proposal to reduce the existing rates of housing subsidies indicate that taxpayers and ratepayers are willing to undertake the expense of the present housing programme provided that they are satisfied that an increased supply of suitable houses for the class of persons who need them most is thereby assured. But the facts seem to show that increases in the rates of the subsidy are at once absorbed in building costs, and have only a disproportionate effect upon the rate of production. The following table shows how the cost of building has progressively advanced with the increase in the subsidy:—

—	Rate of Subsidy.	Average cost of assisted non-parlour house.
Dec., 1922	Nil	£345
Dec., 1923	£6 per house for 20 years	£413
Dec., 1924	Ditto, or £9 or £12 10s. for 40 years, for houses subject to special conditions	£440
Dec., 1925	Ditto	£448

"After making due allowance for other factors, the inference seems to be strong that larger subsidies have been responsible for higher costs. The policy of fixing the subsidy rate over a comparatively long period of time results in permanently increasing costs without correspondingly stimulating supply. One is tempted to inquire whether the problem cannot be approached from the opposite directions. No attempt has apparently been made to regulate the price of the completed house. The cost of building in previous years might form some sort of basis. Fresh legislation would be unnecessary to enable the Ministry of Health to refuse approval of proposals for houses at a price above, say, the average cost of building in the district in the previous year, or whatever other figure might be determined upon. Such action by creating a demand for an article at a price fixed within certain limits might be effective in producing the supply. If it were known that local authorities would not entertain tenders above a certain figure, is it too much to expect that contractors would not in a short time be forthcoming willing to tender within that limit?"

COVENT GARDEN MARKET

A meeting of Covent Garden traders and merchants, organised by the Covent Garden Tenants' Association, was held recently at the Connaught Rooms, Great Queen-street, to protest against the proposed removal of the market to the Foundling Hospital site. Resolutions were unanimously passed expressing the opinion that there was no necessity for the removal of the market, and urging that, in the public interests, the market should be controlled by a public authority.

The Chairman, Major Monro, outlined the progress of events since the last meeting of the Association, and referred to the evidence given before the Royal Commission on Cross River Traffic. He said that the statistics given before the Commission with regard to traffic had been exaggerated and that they had been able to submit evidence to the contrary. It was a triumph that they had been able to alter the opinion formed on insufficient knowledge in the minds of the Commissioners to the extent that there was no mention in their report of Covent Garden, and the alleged congestion created by it, with regard to bridges' traffic. He urged that what ought to be done was to improve Covent Garden Market as far as possible, and not run the risk of wrecking it by moving it to another site. Following the meeting in the Connaught Rooms, the Committee of the London and Provincial Fruit Buyers' Association passed the following resolution in regard to the proposed removal of Covent Garden Market:—

"That this meeting of the London and Provincial Fruit Buyers' Association, representing as it does the majority of wholesale buyers attending Covent Garden Market from the main provincial centres, endorses the resolutions passed to-day by the general meeting of Covent Garden traders, merchants, &c., and maintains that a vast amount of such trade would be lost to Covent Garden Market by such a removal as that proposed."

A REGENT'S PARK AVENUE

Considerable attention, says the *Times*, is being given to the proposal of the Commissioners of Crown Lands to let a timbered site near Regent's Park for the erection of a block of flats. This is the site and grounds of Abbey Lodge in Park-road, part of which forms one side of the avenue known as Hanover-gate, leading from the Outer Circle to Park-road.

There is no danger that this lime-bordered avenue itself will be destroyed. Its trees and oak fences are to remain, according to the present intention of the Commissioners of Crown Lands. Nor is there any immediate possibility of damage on the other side of the avenue, where the property is held by Lady Ribblesdale on a lease that will not expire for another thirty-seven years. The actual trees, fences and shrub hedges of this lovely entrance to the park are all secure from damage or destruction by the conditions the Commissioners have imposed. This body has even gone further in its attempt to disarm criticism by providing that the block of flats must be set back 30 ft. from the line of trees that flanks the avenue on the Abbey Lodge side.

The grievance of those who are anxious to prevent any disfigurement of this avenue and its open sides consists not so much in an objection to building on the site or to making it more profitable to the Treasury than it has been in the past, but in dislike of the sort of development which is proposed. The main line of the flats, if the present plans are adhered to, will run parallel with Park-road and a shorter arm of the building will go parallel with Hanover-gate towards the park. It is intended that this should be an erection of red bricks with facings of Portland stone rising to a height of 70 ft. That would make the building at least 20 ft. higher than any others which can be seen from, or adjoin, the site, and worse still, it would raise it quite to the level of the highest tree on this land and above the tops of some. Opponents of the scheme, while admitting all that can be said of the lucrative nature of the scheme, argue that a reasonable increase in the value of the site could have been reached without deciding to allow flats to be put on it. It is quite clear, however, that no alternative scheme could bring anything like the return that will come from a huge block of flats.

Since financial considerations have led the Commissioners to accept flats, there is every reason why they should not allow these to overlook everything else in the vicinity. To reduce the height of the proposed building by 20 ft. would not meet all the criticisms that are being brought against the scheme, but at least it would make the innovation less objectionable and would restore a fringe of tree-tops on the skyline to the residents who will otherwise be built in.

GLASTONBURY MOTOR PARK

The Council for the Preservation of Rural England have sent the following letter, signed by Lord Crawford, President of the Council, and Professor Patrick Abercrombie, the hon. secretary, to the Archbishop of Canterbury in regard to the suggested motor park at Glastonbury Abbey:—

"The Council for the Preservation of Rural England desires to associate itself with the petition which is to be presented to your Grace, praying you to use your influence to prevent the trustees for the Glastonbury Abbey site from parting with a portion of the ground in front of the Abbot's Kitchen for a motor park. This portion of the site was purchased as recently as five years ago with money specially subscribed by the public and vested in the Diocesan Trustees, in the belief that this historic, beautiful, and sacred spot was in safe guardianship. We are satisfied that the proposed motor park, while not actually damaging any archæological remains, will destroy the quiet and seemliness of the scene. We have also satisfied ourselves by a careful survey of the town that several other sites for a motor park are available which are superior from the town-planning point of view and which, while meeting traffic requirements, will not damage the amenities of the site of Glastonbury Abbey. The matter is urgent; the trustees are already in treaty with the Town Council and we are convinced that a word from your Grace would effectually hold up this unfortunate transaction."

The Council have also sent a letter to the town clerk of Glastonbury, stating that they are convinced that the proposal will do irreparable damage to the beauty of Glastonbury and its most precious possession.

We learn, however, that, with one dissentient, the Glastonbury Town Council resolved at a meeting on Tuesday that a motor park was essential at New Abbotts. In coming to their decision, the Council resolved that the spot was the most advantageous that could be offered to the enormous number of visitors received by the historic town. There might be possible alternatives in lands owned by the Abbey trustees, and they were prepared to consider any that the trustees might offer.

William Willett Memorial Fund.

A little over £3,000 is now required to complete the purchase of 87 acres of Petts Wood, Chislehurst, as a memorial to the late Mr. William Willett, who introduced the principle of "Daylight Saving." Lord Rothermere has sent a contribution of £23 to the Willett Memorial Fund.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting!—ED.

Copying Shop-fitting Designs.

[REPLY TO "SHOPS," DECEMBER 24.]

SIR,—The copyright of architectural design is one of the hardest to establish or protect, and provided none of the clearly protected "gadgets" of the firm concerned are not imitated, I should imagine that "Shops" is on moderately safe ground, though it is hardly possible to say so definitely without knowing the full facts of the case. I should, however, advise him most strongly to preserve his peace of mind by using his ingenuity towards adding his own personal contribution to the design; and there are, indeed, few things so perfect that they cannot be improved. Possibly your correspondent feels himself barren of ideas upon the subject, in which case he will do well to employ a competent architect.

It is for such cases as these, among other things, that architects exist, for the service of the public. ONE OF THEM.

Lathing Deductions.

SIR,—Can any reader inform me if it is the practice in Scotland or elsewhere, and since when, in measuring new work for lathing to make deductions for all brick partitions bearing joists, that is, 4½ in. by length of each partition? At present I measure ceilings by plan of building, and include partitions mentioned.

LATH.

Lino on Floor Boards.

SIR,—I have just had a bungalow erected with the floor boards laid flush on the foundations. Will laying lino down have any bad effects, and if the lino is already laid will the effects be so bad as to make its removal advisable?

A. C. EDWARDS.

Carting Water.

SIR,—I have a building contract for fifteen houses, and there is no clause in the specification stating that the builder shall find water necessary for building. A separate contract was let to another firm to sink well and erect storage tank to supply the houses, but this work has been held up, which has necessitated carting water for building use. Am I justified in charging extra for this carting?

CONTRACTOR.

Composition Building Materials.

[REPLY TO THE GUATEMALA PLANTATIONS, LTD., DECEMBER 31.]

SIR,—I have no doubt that a number of firms offering asbestos products will answer this inquiry, and I have little doubt that such a material as this is most likely to stand the climatic conditions and answer to the requirement of rapid construction. I should, however, like to warn your correspondent to deal with the best class of firm, and to insist on a guarantee of maturity, as there are many asbestos sheets on the market which are little more than rubbish, and if paint is to be applied, even the best quality asbestos needs eighteen months or two years before it is sufficiently inert to take a permanent painted surface.

AFTER THE EVENT.

Chemical Compound for Treating Stone.

[REPLY TO J. M., DECEMBER 31.]

SIR,—Your correspondent should get in touch with any of the well-known firms supplying waterproofing compounds, who will no doubt be able to quote for the brand suitable for treating stone. Their addresses may be found in the advertising columns of *The Builder*. For protecting ordinary stone, however, the use of limewash is frequently recommended by the authorities of to-day.

PROTECTION.

Profit-Sharing Schemes.

SIR,—If any of your numerous contractor readers have adopted a profit-sharing scheme operating amongst their employees, I, for one, should be very interested to have the various details explained.

The scheme in mind should embrace:—Joinery shop manager; works superintendent (outside); clerks; foremen (say, a dozen), and old servants (according to length of service). Floating labour, no doubt, could not be dealt with. The turnover involved would range from £80,000 to £100,000 per annum.

The views of your readers as to what is considered an "adequate office staff" in view of turnover mentioned—taking into consideration work involved in estimating up to, say, £300,000 per year—would also be interesting. PROFIT SHARER.

Damp Walls.

A correspondent's reply to "Interested" (December 24) on this subject has been posted direct.

BOOK REVIEWS

The Workmen's Compensation Act, 1925: with Notes, Rules, Orders and Regulations. By W. ADDINGTON WILLIS, C.B.E., LL.B., of the Inner Temple and North-Eastern Circuit; Barrister-at-Law; Deputy Umpire under the Unemployment Insurance Acts. Being the Twenty-fourth Edition of "Willis's Workmen's Compensation Acts." (London: Butterworth & Co.) 1926. 15s. net.

Special importance attaches to this twenty-fourth edition of Mr. Willis's well-known treatise on Workmen's Compensation, as the passing of the consolidating Act of 1925, which came into force on May 1 last, has necessitated his revising and recasting the work. As we explained in our articles on Workmen's Compensation, the new Act is better arranged than its predecessors, and Mr. Willis endorses the opinion we expressed, but the difficulty practitioners will find themselves confronted with is to recognise the old sections as re-grouped and re-numbered. Mr. Willis, as we did in our fourth article, has arranged a comparative table of the provisions of the new Act and the repealed Acts, but it does not proceed quite on the same principle. We made the provisions of the new Act the leading feature and referred back to the repealed provisions; but Mr. Willis takes the old principal Act of 1906 as the key, and with reference to that refers to the new sections. This Comparative Table seems very well compiled and is a valuable guide to the new Act. But in addition to this Mr. Willis, who in the text makes the new Act, taking the sections in numerical order, the basis of his work, after each section or group of sections, refers to the corresponding sections of the repealed Acts, and further, in the Index, has inserted references to the sections of the new Act. With the introduction of a consolidating statute this question of references is of the first importance, and the author appears to have done his utmost to make the path of his readers clear. The task of the text-book writer is by no means simplified by the consolidation of the law, nor can his text be abridged—for two reasons: In the first place, as the new Act does not apply to any case where the accident happened before January 1, 1924, the old statutes are still material; and in the second place, as the sections are merely reproduced unaltered, the old case law still applies, so the old features have to be retained but incorporated with the new enumeration and arrangement of the consolidating Act. This task Mr. Willis appears to have carried out with his usual thoroughness, and those who have been awaiting a guide to the consolidating statute will give an unusually warm welcome to what has become an annual edition of this well-known text-book.

If we may do so, with all respect for an author of such experience, may we express regret that a point we drew attention to in our recent articles does not seem quite clearly stated, and that is that the defence of serious and wilful misconduct can only arise where the misconduct has occurred within the sphere of the workman's employment. We emphasised this point in our first article because we found that some general misapprehension of this point still existed and a definite statement on the point seemed required. We are also sorry that Mr. Willis has passed over without comment the difficult section 41 relating to the payment of poor relief, as his opinion on the points raised by this section, which first appeared in the Act of 1923, would have been extremely valuable. In conclusion we may state that the case law has been brought up to date down to March 31 last, and that the Rules, dated April 28, are included in this edition of a work which has established its own reputation and requires no recommendation at the hands of any reviewer.

The Law of Wills for Testators; or, How to Make a Will. By G. F. EMERY, LL.M., of the Inner Temple and South-Eastern Circuit; Barrister-at-Law; Official to the Archdeacon of Ely; late Scholar Trinity College, Cambridge; Author of "Handy Guide to Patent Law and Practice," &c. (London: Effingham Wilson.) 1926. 2s. net.

This appears to be a second edition of this little handbook, and the reason for its appearance is stated in the preface to be that the Administration of Estates Act, 1925, and various allied Acts make a new edition necessary. The author there observes that the law as to the devolution of property on an intestacy has been put into the melting pot and the administration of an intestate or partly intestate estate has been made considerably more complex, and any married person, whose property apart from personal chattels is worth more than £1,000, should consider whether the Will imposed on an intestate estate by the Act meets with his or her approval, and unless they are completely satisfied they should make a Will without delay. We do not know that we need do more than give the above quotation from the preface. When the author speaks of "The Will imposed on an intestate estate" we presume he refers to the statutory provisions as to the distribution of the residue of an intestate estate which will be found more particularly in Chapters II and III.

This little volume in about 100 pages appears to give some useful information as to Wills in the altered condition of the law, but we quote with approval the author's observations on page 51, which appear to us to make the object of his work plain and safe: "It is, however, only in very simple cases . . . that a wise man will trust to his own ability to make a Will. Some people are apt to forget that a Will is a legal document dealing with property and furthermore dealing with property *in futuro*. Although such persons would not dream of preparing a conveyance of property *inter vivos*, they yet consider themselves quite competent to undertake the more difficult task of preparing a Will to convey property after they have departed." These are true words of wisdom, for even more than one President of the Probate Division has failed to draw a Will that did not need an application to the Court before it could be administered.

Read with the author's own limitation that it is unwise to make a Will without legal advice this little handbook should serve a useful purpose in making the layman see how he stands under the law as altered, whether a fresh Will is desirable, and then, if in the least doubt, to hurry off to his legal adviser as soon as possible,

THE BUILDING TRADE

BY-LAWS RELATING TO BUILDINGS AND STREETS—I

INTRODUCTORY.

THAT there have been constant complaints in connection with the by-law system cannot be denied, and that these complaints are of long standing can be attested by reference to the Report of the Departmental Committee on Building By-laws, which was issued in 1918, where it is stated: "For some years past there has been in Parliament and in circles interested in building (especially in the housing of the working classes) an agitation which has periodically found an echo in the lay and technical Press with reference to restrictions imposed, or said to be imposed, by by-laws." The Committee did not deny that there were some grievances, but they found that many of the complaints were based upon misapprehension as to the various methods of control, which caused many persons to attribute all restrictions imposed upon building and development to the operation of by-laws. The Report gave one or two instances of this, as, for example, that common drains are prohibited by by-law, whereas where local authorities have prohibited such drains, or sought to prevent their use, it has been by regulation, but never by by-law. Also, the Committee found that some 70 per cent. of the complaints made before them arose out of another question which has no connection with by-laws—the conditions imposed by local authorities when taking over private streets. Other complaints arose out of a misapprehension as to the different forms of control which, besides by-laws, include public Statutes, local Acts, and regulations, as well as discretionary powers.

The Report of this Committee has not received the attention it deserved owing to the many pressing matters occupying public attention since the termination of the war, and in the following articles we propose examining the findings and recommendations of the Committee in some detail, but before proceeding to discuss the Report we desire to make one or two observations of a preliminary nature.

In the first place, if grievances exist, the present would be a favourable opportunity to bring them forward and prove them, as it is rumoured that the Public Health Acts are to be consolidated in the near future. We shall deal with this question of consolidation in subsequent articles. Secondly, as regards the housing of the working classes, much has been done since the Committee issued its Report to remove grievances, but this has somewhat complicated the general law with which we are dealing; for, as we shall show, one or two sections of great importance in connection with buildings generally, have been inserted in Housing Acts carrying out some of the recommendations of the Committee, which sections may well be overlooked, for those persons concerned with building by-laws generally look to the Public Health Acts for information. Thirdly, we were very anxious in this first article to give instances of actual grievances arising out of the variations which occur in by-laws in different districts and to ascertain whether any general principle could be derived as to the causes which led to variations from the model codes being inserted, but we have found this an impossible task. The Committee itself found it difficult to run to earth grievances directly traceable to by-laws, the grievances proved being generally due not to the system but rather to neglect of, or misuse of, the machinery provided.

Possibly the publication of this series of articles, however imperfect they may be, will serve a useful purpose by evoking correspondence on the subject, and we shall welcome any examples of cases of real hardship which our readers can send us. Of course, many complaints may be traced to the retention of obsolete by-laws or to the application of by-laws unsuitable to the district. A good example of the evils attending the retention of obsolete by-laws was furnished by the celebrated case, known as the Repton School case, which we shall refer to in detail in a subsequent article. The by-law in question had been a perfectly reasonable by-law when it was passed and approved, relating to open spaces at the rear of domestic buildings, but in 1907 a statutory change had been made in the definition of what was to be deemed a "new building," bringing in any addition in front of an existing building. The model forms were at once altered to meet this new definition in the statute, but the retention of this by-law by the local authority made it impossible to make any addition in front of an existing building, even such as a bay window, and the Court held it invalid.

In the past the hands of the Local Government Board, and its successor the Ministry of Health, have been much tied, having no power (except under the Housing Act, 1909), to interpret by-laws, enforce them, entertain appeals from their requirements, or insist on their repeal, and an instance is given in the Report of the Committee showing the bearing this has had on both the retention of obsolete by-laws and the application of by-laws unsuited to a district. A local authority in 1906 presented by-laws for approval which in the opinion of the Local Government Board were too exacting for the character of the district, containing more stringent provisions even than the model then in force. The district adjoined and surrounded on two sides a large and growing town, and the by-laws actually in force dated from 1864 and were open to the gravest criticism. Had the Board refused to approve the by-laws presented in 1906 the district would have remained only subject to the by-laws passed in 1864, and had the local authority been pressed too far to moderate the proposed by-laws they might have abandoned their proposals; therefore, with some amendment of the most stringent provisions, the Board felt constrained to approve the by-laws. The Report states that this was by no means an isolated case.

We shall show in succeeding articles that this cause of grievance, owing to the recommendations of the Committee, has already been removed, for by section 13 of the Housing Act, 1923 (section 101 in the consolidating Act of 1925), the Minister of Health is empowered, where he is satisfied by local inquiry or otherwise that the erection of any building is impeded unreasonably by by-laws as to buildings or new streets, to require the local authority to revoke the by-laws or to make such new by-laws as he may consider necessary to remove the impediment, and in case of non-compliance on the part of the local authority the Minister may himself revoke such by-laws or make new by-laws to remove the impediment. This is an extension of section 44 of the Housing Act, 1909, to any buildings in any borough, or the district of any urban or rural council.

This strengthening of the hands of the Ministry will tend to remove some of the grievances hitherto experienced, and a recent circular issued by the Ministry called the attention of local authorities once again to the powers conferred by the above section and pointed out that although the Minister had been reluctant to use this power if he could avoid doing so, now that more than two years had elapsed since Parliament had made this power available, the national interests involved suggest that the power should be used where by-laws are of a definitely restrictive character. This, of course, means definitely restrictive as creating unreasonable impediments to building, and the power can only be used where such an impediment can *bona fide* be found to exist.

We have some authority for saying that if another suggestion of the Committee were adopted, viz., that all by-laws should be made subject to a time-limit, after which they would automatically terminate, this would work with less friction and cause less complaint on the part of local authorities, and it is obvious that it would be more generally effective in bringing by-laws into line. We shall refer to this in detail in subsequent articles.

The figures published in the Annual Report of the Ministry last August show that progress has been greatly accelerated in the last three years in substituting by-laws of model types for those out of date; the Ministry keep the model forms well up to date and reprint them at very short intervals expressly to make the latest results of the experience of various local authorities available for those drafting new by-laws, so there is less excuse for unreasonable variations than used to be the case, and it is satisfactory to note that since the beginning of 1923 up to the commencement of 1926 some 700 authorities have undertaken a revision of their by-laws, and, as we shall show later on, when new by-laws are presented for approval, the Minister, in accordance with a recommendation of the Committee, is not so apt to allow local variations as was the case in the past.

It was admitted before the Committee that many local authorities in the past have shown a preference for introducing innovations of their own into the model codes, and, as it was put, "to dot the i's and cross the t's," but the process often went beyond this, and in one case which has been brought to our notice it took the form of requiring by by-law fastenings to be fitted to the doors of water closets, earth closets, and privies, a necessary provision but hardly one to be introduced in by-laws subject to penalties.

As we have said, we have found it difficult to furnish and classify complaints as to the operation of by-laws, but a correspondent has kindly furnished us with some examples of what he considers unreasonable conditions in force in certain districts, and amongst these he cites a by-law which provides that in an attic intended to be used as a sleeping apartment the room shall not be less in any part than 5 ft. in height. Our correspondent contends that this obstructs the construction of real cottages, for if the roof starts at 3 in. from the floor a considerable portion of the floor space inside has to be cut off, with a 45 degrees pitch of roof, thus reducing the floor space of the attic very considerably, whilst, if the only other alternative is adopted of starting the roof pitch at 5 ft. it gives an excessive proportion of wall to roof outside. The uniform height specified in this by-law appears unfortunate, but one of the points the Committee on Building By-laws drew attention to, as a legislative gap, was that the Statutes conferred a power to regulate the height of rooms by by-laws, but not their cubical content or area, and this point appears to deserve attention. The Committee also pointed out that although by-laws can be made for securing ventilation they cannot require lighting, and powers have been obtained to secure this by local Act when local authorities desired to deal with it.

Some of the complaints made against by-laws brought to our notice are based upon the

ground that they are too rigid, whilst others complain that sometimes an element of discretion is allowed which makes it difficult to ascertain what will be satisfactory compliance. Amongst these latter complaints there is some weight, and in the following articles we shall deal with this subject of discretion, but we may note here that the Committee made some important observations on the kind of by-law, the subject of complaint to us, which allows an operation to be done "in a manner satisfactory to the local authority" as compared with a by-law which permits it to be done "in a satisfactory manner." The distinction between the two is obvious. In the first case no man can say what will be deemed satisfactory to the local authority, but in the second the question of what is a "satisfactory manner" can be determined by the Courts as a last resort, and can be ascertained beforehand by expert opinion, and the Committee approved the latter kind of clause but disapproved the former. As we shall show, the Committee suggested a special tribunal to deal with the interpretation of by-laws in advance, and if such a tribunal was established such questions as the above, *i.e.*, what is "a satisfactory manner," could, it was suggested, be referred by agreement of the parties to that tribunal.

In the following articles we shall deal first with by-laws relating to buildings, and subsequently with the question of streets. The Committee found the questions relating to the control of streets of far greater difficulty than the control of buildings, but in connection with streets, by-laws only play an important part in the early stages of laying out new streets.

Building Science Lecture.

The opening lecture on building science under the Trust inaugurated by Mr. Alfred C. Bossom, is to be given early in February by Professor C. H. Reilly, of Liverpool University, at the Royal Society of Arts, with Sir Frank Baines in the chair.

NEW BUILDINGS IN LONDON

Baker-street.—SHOPS.—Messrs. H. Neal, Ltd., of Oaklands Gate, Northwood, are erecting shops at 1–5, Baker-street, W.1, for Mr. Voyce, D.S.O. The architect for the scheme is Mr. S. Gordon Jeeves, of 16, Hanover-square, W.1.

Baker-street. — CONVERSION. — The Pitcher Construction Co., Ltd., are converting 108–114, Baker-street, into shops and premises for the Metropolitan Surplus Co. The plans have been prepared by the owners' architect.

Bolsover-street.—EXTENSION.—Messrs. Holloway Bros., of Bridge Wharf, Grosvenor-road, S.W.1, are the builders for the new extensions now being erected in Bolsover-street, W.1, for the Royal National Orthopædic Hospital. Messrs. Rosser & Russell are carrying out the heating arrangements and the flooring work is being done by the Kleine Patent Flooring Co. The electric lighting, &c., is by Messrs. Duncan Watson & Co. Mr. R. M. Piggott, F.R.I.B.A., 44, Bedford-row, W.C.1, is the architect.

Cornwall-road.—BUILDING.—A tender is about to be accepted by the Metropolitan Police, New Scotland-yard, S.W.1, for the erection of police married quarters in Cornwall-road, Lambeth. Mr. G. Mackenzie Trench, F.R.I.B.A., is the architect, and Messrs. Thurgood, Son & Chidgey, 18, Adam-street, W.C.2, have supplied the quantities.

Duke-street.—EXTENSION.—For extensions to their premises Messrs. Penberthy & Co. have acquired premises in Duke-street, Oxford-street, W.1. No architect or builder has been appointed in connection with the scheme.

Clapham.— IMPROVEMENTS. — New cleaning sheds are proposed for Clapham Station by the Southern Railway Company in their programme for 1927.

Dollis Hill.—HOUSES.—Messrs. Richard Costain & Sons, Ltd., have submitted a preliminary plan of 1,394 houses proposed to be erected at Dollis Hill, on the south side of the North Circular-road between Neasden and the Edgware-road, to the Willesden U.D.C. for approval.

Euston-road.—PREMISES.—Messrs. Greenham Ltd., have just carried out the demolition work at 367, Euston-road, W.1, for the erection of new premises for Messrs. G. Maile & Son, Ltd. Messrs. J. Smith & Sons (Norwood), Ltd., of South Norwood, are the builders, and Mr. E. A. Watson is the architect.

Highgate.—ESCALATORS.—Work in connection with the establishment of comb-type escalators to supersede the four lifts at Highgate Underground Station will begin shortly. When the escalators are installed, the lifts will be dismantled, and the space they occupy devoted to the formation of a larger booking hall.

Portland-place.—PREMISES.—Messrs. C. H. Abrahams is carrying out the demolition work at 73, Portland-place, W.1, where new premises are to be erected. Messrs. Wills & Kaula, 3, Southampton-street, W.C.1, are the architects.

Richmond.—BANK.—Messrs. E. A. Roome & Co. have secured the contract for the building of a new branch for Lloyds Bank, Ltd., in High-street, Richmond. Messrs. Young & Co., of 6, Queen Anne's Gate, Westminster, are supplying the constructional steelwork and concrete reinforcement. Mr. Horace Field, F.R.I.B.A., 5, Gower-street, W.C.1, is the architect.

Sloane-square.—RECONSTRUCTION.—A new escalator at Sloane-square District Railway station is to be an ascending one from the west-bound platform to the street level, with an intermediate landing for east-bound passengers, and its construction forms part of a general scheme of reconstruction at this station. The other improvements include the complete rebuilding of the booking-hall and entrance to the station, and the installation of two booking booths. The District Railway's own architects have prepared the plans. No contracts have yet been placed.

St. Thomas's-street. — ENLARGEMENT. — Sir Gilbert Wills has notified the treasurer of Guy's Hospital that he has increased his donation to the Hospital's Bicentenary Fund from £5,000 to £50,000. This gift is for the purpose of enlarging and reconstructing the out-patients' and casualty department. No definite building plan has yet been decided upon.

Twickenham.—HOUSES.—Approval has been given by the Town Planning Committee of the Twickenham Borough Council to the lay-out, prepared by Sir Banister Fletcher, V-P.R.I.B.A., for the development of the estate of the Worshipful Company of Carpenters at Twickenham. The estate, which is an island site, is situated within a few hundred yards of Strawberry Hill Station, Twickenham Green, and two golf courses, and a special feature of Sir Banister's lay-out is the provision in the centre of the estate of space for ten tennis courts. Plots for some 150 houses are shown on the lay-out giving an average of eight houses to the acre, and the land has been spaced out to allow of the erection of a garage to each house if required by purchasers of the plots.

Victoria.—SHEDS.—In the Southern Railway Company's programme for 1927 an allowance has been made for the erection of cleaning sheds at Victoria Station, S.W.1. The estimate for the building of these sheds, including those at Clapham, is £160,000.

Wilson-street.— PREMISES. — Messrs. Greenham, Ltd., are carrying out the demolition work on the corner site of Wilson-street and Arne-street, W.C.2. The site has been acquired by Messrs. Odham's Press, Ltd.

Wimbledon Common.—BUILDINGS.—Negotiations are taking place for the sale of Belmont, a mansion close to Wimbledon Common, to the Wesleyan Training College for Women Elementary Teachers. Should the purchase of Belmont be concluded it is intended to adapt it to the purposes of a training college, and erect other buildings, and the total cost of the scheme is believed to involve a sum of about £70,000.

LEGAL LIABILITIES OF ARCHITECTS AND CONTRACTORS

MR. WILLIAM E. WATSON, Barrister-at-Law, F.R.I.B.A., recently read a paper on this subject at the Northern Polytechnic, in the course of which he said that in the time at his disposal it would only be possible to give very slight sketches from different view points; these he had thought of as instances that might reasonably arise in the ordinary and everyday work of either of the two occupations, and it might be well to say first that the usual claim or counterclaim brought against an architect was founded on negligence. This might be defined as a breach of duty to do something which a reasonable or prudent man guided by those considerations which ordinarily regulated the conduct of human affairs would do; or to abstain from doing that which a reasonable or prudent man would not do. The opposites of negligence might be diligence, care or prudence, and when these were not exercised and injury came to another, the negligent person might be liable in damages and might even be criminally liable. It would readily be seen that negligence connoted a duty—for instance, a person driving a motor owed a duty to the pedestrian not to knock him down, and as the degree or extent of this duty varied, so also did the degree or extent of negligence. Therefore, when an architect's services were employed, the employer assumed that the architect was competent to perform the duties reasonably to be expected from him, and a contractual relationship was therefore established.

The architect was in default if he failed to possess that amount of skill and experience which was usual in his profession and which would be exercised by his confrères, but he would not, generally speaking, be held liable for loss resulting either from mere error of judgment on a difficult point or from want of skill in performance of some act not appropriate to be performed by architects; he should not, however, undertake works of skill for which he was not qualified, and it was his duty to know whether or not he was so qualified. For instance, though many architects drew up a form of contract or draft a legal award, such duties did not specially lie within their province, and even although they might not make an extra charge for doing so they might nevertheless lay themselves open to redress if it caused loss to the employer. On the other hand, it sometimes happened that the architect acted under a building contract not in his professional capacity but as arbitrator or quasi-arbitrator to settle disputes or give certificates, and in such cases he was not liable for failure to use the skill ordinarily demanded. If he was employed on account of his skill to determine some point between two or more parties he was not liable in that capacity for (*a*) want of skill, (*b*) ignorance of law, or (*c*) negligence to either builder or employer; in other words, if he was placed in a position where he had to exercise his judgment impartially he was not liable for negligence in the exercise of that judgment.

Again, an architect was not liable when he was directed to use newly introduced inventions, because he was not bound to be more than abreast of his time; a case would illustrate this. An architect was employed to prepare plans for and superintend the erection of model lodging-houses wih the latest improvements, and he was instructed to put in a new patent concrete roofing, which was much cheaper than lead or slate. The concrete roofing proved a failure, and had to be removed and replaced. Action was brought against the architect for negligence. The judge charged the jury that although failure in an ordinary building was evidence of want of competent skill, yet if out of the ordinary course an architect was employed in some novel thing in which he had no experience, and which had not the test of experience, failure might be consistent with skill.

The general test for liability for negligence was that damage must have been caused by the negligence; if advice was negligently given it must be acted upon before any liability could arise. When, however, negligence had been proved the amount of damages was to be measured by the consequent loss to the employer, and it was immaterial that such damages might exceed the amount of the fees due to the architect on the particular contract. Again, it was decided two centuries ago that it was proof of unskilfulness in a profession not to act in accordance with established rules of that profession, and it was frequently on that point that evidence of brother architects assisted a person charged with negligence by his employer. The architect owed a general duty to know and act in accordance with the law so far as it affected his work; a building might be illegal by violating the public law regarding construction and position, and it might also be illegal by the infringement of private rights. This responsibility was frequently passed on to the contractor, who had very numerous burdens to bear; in this particular case the plea that he conscientiously followed the drawings and that the architect periodically visited the works might be a reasonable defence, but on the other hand it must be stated that architects did not come within the penal clauses of the various statutes which were generally directed to owners, occupiers and builders.

Of the 33 Clauses which made up the Royal Institute of British Architects' Form of Contract the architect was named in no less than 29 of them, and among the manifold duties he had to perform, he laid himself open to attack for negligence. His first duty must be to ascertain from the particular contract the extent and purview of his jurisdiction, which would be clearly defined. This would include a responsibility which was well defined by the laws of agency, for the architect was the agent of the employer while building works were in progress. He would have to express satisfaction or dissatisfaction, and he might have to certify both for payment or against payment. He would also have to record a date from which penalties might begin to run and certify extensions of time where necessary. He would have to exercise an impartial judgment as to what were defects arising from defective materials and workmanship at the expiration of the maintenance period; he would have to issue orders in writing for extra works, and many other duties too numerous to mention. Suffice it to say that in default of any of them he laid himself open to attack for negligence in the interests of his employer. On the other hand, where bankruptcy of one of the parties had supervened or a receiver had been appointed, an extra set of burdens was placed upon the architect, for he had to account very accurately regarding the payments he might be called upon to certify. As certifier the architect did not act as an arbitrator; in this condition he might be said to be a preventer of disputes, whereas an arbitrator acted after dispute had arisen, and a rule had been laid down that where a contract provided for the determination of the contractor's claims and liabilities by the judgment of a particular person, everything depended upon that decision, and until he had spoken or certified no right arose which could be enforced either at law or in equity (Scott *v.* Liverpool Corporation, 1858) Therefore the whole onus of resorting to arbitration might reasonably be said to flow from the impartial judgment of the architect.

It might be said that building contracts differed from the sale of a mere chattel, such as a piece of furniture, because building works were affixed to the soil and to remove them would be totally inequitable; that was a peculiarity which placed building contracts on a plane different from other contracts and had led the courts somewhat jealously to watch over the rights of a contractor; on the other hand, if two parties made a contract which was unambiguous, however unreasonable and oppressive it might be, a Court of Justice could not do otherwise than give effect to its terms. It had been said the architect owed a duty to his employer when acting as his agent, and these duties were well defined in the law of agency; he also owed duties to his employer as adviser, as designer, and as supervisor. As adviser his advice must be sound and show good judgment, as, for instance, when the possibilities of a site were being considered or the stability of existing buildings; this would imply a reputed knowledge of local by-laws and conditions generally, but only to such an extent as might reasonably be expected from one who was not a professional lawyer.

As designer the architect contracted to supply plans and specifications prepared with skill and care and capable of being duly executed; skill included judgment, for the employer purchased both skill and judgment, but not necessarily of a superlative character. As designer the architect was required to be conversant with statutory regulations and must have regard to restrictions, whether public or private, and he must, if requested, furnish honest estimates of the cost of materialisation of his design. Failure in this respect might involve a claim in damages, and the agreed amount of remuneration was no guide to the amount of damages which might be claimed.

As adviser or designer the architect stood in the position of an independent contractor whose services the employer could dispense with at his pleasure, but as soon as the contract was signed the architect's duties as agent and supervisor commenced. These would continue normally until the contract was satisfied. These duties included inspection of materials, the quality and quantity of the work, the giving of instructions, the making of corrections and at proper times the provision of further details and explanations, the measurement and certifying for all proper charges, including penalties, the dealing with variations, including omissions and additions, as well as extras, so far as the architect's authority might extend. In all these matters he was the agent of his employer, and it was sound law that no understanding and no payment were permissible whatsoever between the contractor and the architect, or vice versa, unless the employer had knowledge of it and assented to it.

Probably he (the speaker) had said sufficient to demonstrate that there was a large field of responsibility upon the architect in his everyday work; they would now follow the matter into a few concrete examples on the subject of dry rot. Dry rot was known in ancient times, and King Solomon, in rebuilding the Temple, "made narrowed rests round about that the beams should not be fastened in the walls of the house." It was described as the last stages of a disease or state of decomposition in timber induced by fungi, the type peculiar to domestic buildings was called Merulius Lachrymans and was not found in the forest. In Germany no less than forty different species of dry rot were recognised, for some of which only the architect was there held responsible. The spores might lie dormant for many years until conditions favourable to their germination appeared. The presence of an alkali, such as ammonia, was favourable to development, and this was found by emanations from soil or decomposing organic matter; other conditions favourable to development were a warm, still and damp atmosphere, such as existed in cellars and badly ventilated floors covered with linoleum; in fact, it might be found in any part of a building where conditions favourable to development existed. A 7 in. by 3 in. pitch pine joist, the end only of which appeared to have been infected, was cut open, and the mycelium was found in the interior 6 ft. away from the decayed end.

Painting or tarring unseasoned timber shut the embryo fungus into a chamber convenient

for its development. The spores were very minute and light and could be carried on the clothes of a workman from one building to another. Such was dry rot. It seemed as virulent as a plague. With regard to responsibility for it in respect to negligence, suppose the architect was instructed to renovate and add to an old building; his contract would probably provide a twelve-months' maintenance clause, which the contractor would think quite long enough, as a percentage of his money would be held in abeyance; the architect's liability, however, by the statutes of Limitation passed in 1623, lasted for some six years, and might well give time for the dry-rot fungus to develop. It would develop in less time, as the following case would show. An action was brought in 1909 by a building owner against architects and contractors to recover damages for negligence and breach of duty in carrying out alterations at a house. In 1906 the architects were appointed, and the client wished steps to be taken to deaden sound between a sitting-room on the ground floor and a nursery overhead. Lime pugging was used for the purpose. In 1908, after the house had been occupied nearly a year, it was discovered that the whole floor under the nursery was affected by dry rot; the floor had to be removed and replaced at a cost of £120 and the client lost the use of his house while the work was being done; the floor boards were grooved and tongued and there was no ventilation underneath. The architects contended that the trouble was caused by putting down linoleum. The judge, in summing up to the jury, said the question was whether negligence had been proved against the architect or the builder or both, and the jury found against both for £165, adding that "in their judgment there was a minor degree of blame in the defending architects." In another case a Board of Guardians sued their architect for negligence and claimed damages. The building was begun in 1902 and completed in 1905; the final certificate was given to the contractors in the year following. Over £100,000 had been spent upon the building, which covered an extensive area. In 1908 it was found that instead of there being a layer of concrete over the whole area beneath the floor and the joists laid upon it bedded round with finer concrete 2 in. thick, there were wooden pegs driven into the ground with joists nailed thereto and with concrete filling between. A direct communication with the ground was left through the pegs and each peg acted as a pipe for drawing up moisture; the system consequently destroyed the whole purpose for which the concrete was laid down, and the flooring got in so bad a condition of dry rot that it had to be taken up. The architect agreed that he would rectify the work on condition he was not proceeded against, and he employed another contractor to remedy the defects. It was soon discovered that the dry rot was very extensive and not merely local, and, in fact, entailed the re-doing of the whole, whereupon the architect stopped. The employers then engaged another architect and themselves completed the rectification at a cost of some £2,000. They then claimed first for negligence in supervision, and secondly for the issue of a final certificate exonerating the contractor from any liability, and thirdly for breach of agreement to do the necessary repairs if proceedings were stayed. The defence was (1) that the work was not carried out as specified; (2) that it was done by the complicity and fraud of the clerk of works acting with the builder, and it was suggested the manner in which the work was done saved an approximate £400 to the builder; (3) a repudiation of the agreement to rectify the work because it was not under seal. The judge held that the architect had exonerated the contractor from responsibility for dry rot by the issue of his final certificate, but there might yet be the question of fraud and collusion. As the employers were probably debarred from proceedings against the contractor, they naturally claimed against the architect who undertook to rectify the defects, and the learned judge held there was a binding agreement because there was a forbearance to continue proceedings. It was the duty of the clerk of works to call attention to the variation from the specification in the interests of the employer, but it was also the duty of the architect to see that his design was properly carried out. The architect was held liable in law, and judgment was given for the employers with costs on the claim and counterclaim

[*To be concluded.*]

COAL STAITHS AT SEAHAM HARBOUR

A PAPER on this subject was read by Mr. Alan Moncrieff, M.A., A.M.Inst.C.E., M.Inst.Struct.E., before the Institution of Structural Engineers recently. The lecturer said that the South Dock at Seaham was completed in 1906, and on the west side the two northernmost berths were equipped with coal staiths. Those staiths consisted of timber trestles at approximately 16 ft. centres, with a deck carried on rolled-steel joists so arranged that there was approximately one joist under each rail. On top of those joists were 10 in. by 10 in. timber cross sleepers at approximately 3 ft. centres, and the decking was composed of 3 in. timber. Those staiths were equipped with eight coal spouts, but only seven of them were in regular use.

In 1911, increased coal shipping facilities being required, the southernmost berth on the west side of the South Dock was equipped with staiths, these being built with steel trestles and a deck arrangement similar to that on the timber ones. One reason for adopting steel trestles was in order to decrease the risks of fire. An examination of the timber staiths, made in 1922-1923, showed clearly that these had been designed for 10½ tons capacity wagons of a total weight of 17 tons.

The steel staiths were designed to carry 15 tons capacity wagons of a total weight of 23 tons. The strengthening of the timber staiths was therefore put in hand in order to render them capable of carrying the increased loads, and was completed in 1924.

Calculations showed that the trestle legs themselves were sufficient for the required loads. These legs were of whole timbers nominally 12 in. by 12 in., although some of them were as small as 10 in. by 11 in. Only in a few cases was it necessary to strengthen the trestle legs by the addition of extra bracing to reduce the effective column length. Investigation showed that the most economical means of strengthening the superstructure of the staiths was to put in a complete system of new girder work. In order to carry the heavier traffic these girders had to be 20 in. by 7½ in. by 89 lb. rolled-steel joists in place of the previously existing corroded joists, which were 12 in. by 6 in. by 54 lb.

In the strengthening of the timber staiths there had been approximately 475 tons of steel and iron work used and 26,000 cubic ft. of new timber work, which latter figure included the renewal of a large number of cross-sleepers and a large proportion of the decking. The problem presented to strengthen the steel staiths at South Berth was much the same as in the case of the timber staiths. There was, however, one vital difference, and that was that the main joists or rail bearers were carried on steel trestle caps on the top of steel legs. It would therefore have been a very serious thing to have contemplated putting in new girders of a deeper section. The method adopted, therefore, was to halve the span by fixing in the middle of each bay underneath the longitudinal girders a new cross beam. This consisted of a 15 in. by 6 in. by 59 lb. rolled-steel joist, which was supported by new longitudinal girders in the form either of rolled-steel joists or of two channels and plates, depending upon whether the axis of the joists forming the trestle legs was at right angles or parallel to the line of the staiths. The strengthening of the steel staiths cost approximately £6,400, which strengthening required about 190 tons of new steel and iron work.

It was then decided that the existing South Dock should be extended with a tongue approximately 400 ft. in length and varying from 200 ft. to 135 ft. in width, at the southern end of the old South Dock, and completed designs were made for the trestles to be of reinforced concrete. The question of the most economical span between the trestles was considered in order to determine the best proportions between the steel girders and the trestles, and spans of 25 ft. centres were ultimately adopted, and considerable attention was given to the form of the reinforced concrete trestles.

The trestle legs were normally 15 in. by 13 in. rectangular section, the only exceptions being those carrying the 50-ft. span girders where the railway lines at cope level passed under the staiths. These particular trestle legs were 18 in. by 14 in. rectangular section.

The concrete proportions used were 7½ cwt. Portland cement, 11 cubic ft. of sand and 22 cubic ft. of gravel.

The steelwork girders carrying the deck were plate-girder type 3 ft. deep, braced together generally with cross diaphragms and wind bracing. Where intermediate supports to the 10 in. by 10 in. cross timbers were necessary the diaphragms were superseded by cross joists, which in their turn carried additional longitudinal joists.

DIARIES AND CALENDARS 1927

"The Builder" Diary.

The Builder has again issued "The Architects' and Surveyors' Pocket Diary" for 1927. It is a pocket diary suitable for the use of members of the Architectural, Surveying and allied professions, and contains a generous diary space, while a supply of squared paper is also bound in. There is a section devoted to technical information and data, while in addition there is a short memorandum on each of the governing bodies of the several professions.

The A.A. Year Book and Diary.

The Architectural Association have issued from 34–36, Bedford-square their Year Book and Diary for 1927, a most attractive publication. Apart from the ample diary space is a large section devoted to technical data, scales of charges, &c., while there is a useful trade directory. In addition there is a large part given over to the rules and activities of the "A.A.," whose services to architecture are so well known and so widely appreciated.

Messrs. Charles Letts & Co.

Messrs. Charles Letts & Co.—who, in 1926, surpassed all previous records by increasing the circulation of their diaries to well over the two million mark—have, for the coming year, issued a number of very attractive diaries of all styles and for all purposes. For personal use, there are many types of diaries comprehensive but not bulky, and at all prices from one shilling upwards. Many styles are fitted with the self-opening Printator Tablet. For office and home requirements there are scores of calendars and office diaries of all kinds, of which, perhaps, the ever-useful "Scribbling Diary" is the most popular.

Other Diaries.

We acknowledge with thanks the receipt of calendars and diaries from the following:—

The Ringmer Building Works; The London School of Printing and Kindred Trades; Messrs. J. Sagar & Co., Ltd.; Messrs. Joseph Freeman, Sons & Co., Ltd.; Mr. Frank S. Mayo; Messrs. Charles P. Kinnell & Co., Ltd.; Callender's Cable and Construction Co., Ltd.; Messrs. Williams and Williams, Ltd.; Messrs. Rd. Johnson, Clapham & Morris, Ltd.; Mr. R. G. Spiller; Messrs. Marshall, Sons & Co., Ltd.; Messrs. Rowe Bros. & Co., Ltd.; Messrs. Allen Everitt & Sons, Ltd.; The Ironite Company, Ltd.; Messrs. W. W. Sprague & Co., Ltd.; Messrs. William Brown & Co., Ltd.; The Patent Victoria Stone Company, Ltd.; Messrs. A. T. Morse, Sons & Co., Ltd.; Messrs. Braithwaite & Co., Engineers, Ltd.; and C. & S. Construction Co.

ADVERTISEMENT SIGNS ON HOUSES

A POINT of an unusual character appears to have been decided in the recent case Gifford *v.* Dent (*Weekly Notes*, December 11). The plaintiffs were tenants of a shop on the ground floor of certain premises and of the basement, which projected from the face of the building under a stone covering somewhat higher than the pavement of the street. The defendant was the tenant of a front room on the second floor of the building, and he occupied subject to a covenant "not to allow any placard, posters or advertisements whatsoever (other than plates or other similar announcements), unless previously approved," to be erected, placed or fixed in or upon any part of the said premises. He had affixed to the front wall of the building, outside the room he occupied, an illuminated advertisement sign 20 ft. in height and projecting 4 ft. 8 in. from the wall. The report does not state whether this had been done with or without the approval of the landlord, but presumably without approval. The plaintiffs brought this action for an injunction restraining the defendant from allowing the sign to remain fixed to the front wall, and for damages for trespass. The Court held that this sign was not a "plate or other similar announcement," and it was prohibited by the covenant, and that it also constituted a trespass for the plaintiffs, as tenants of the projecting basement were tenants of the space above *usque ad coelum*, and although the Court found that the sign caused neither damage nor annoyance to the plaintiffs, the Court with great reluctance held that in law the plaintiffs were entitled to an injunction.

The case is so unusual we regret that it is not to be reported in an extended form in the Law Reports. In most cases such actions have been brought by the owner or lessor of the premises, and as we have shown (see the *Builder*, October 30, 1925) turn upon the question of fact as to whether there has been an alteration in the fabric, elevation or decoration of the building and the terms of the covenant. In the case Hope Brothers, Ltd. *v.* Cowan (1913, 2 Ch. 312; *The Builder*, June 20, 1913) the lessors of part of a building sought to restrain the lessees of offices from placing window boxes outside the windows supported on brackets. There was no alteration in the structure apparently, and no covenant restraining it, but the plaintiffs, the lessors, contended that the outside walls were not demised in the lease, and it was held that in the absence of context to the contrary the outside walls were included in the lease, a decision which was followed in Goldfoot *v.* Welch (1914, 1 Ch. 213).

In Bickmore *v.* Dimmer (1903, 1 Ch. 158; *The Builder*, December 13, 1902) this was again an action by lessors, and the decision turned on the word "alteration" in a covenant. The tenant, a clockmaker, exposed a clock outside the building, but this it was held in the way it was erected did not affect the structure of the building, and the injunction was refused. This case introduced a new element into the interpretation of such covenants, as there are dicta to the effect that the purpose for which premises are let must also be regarded. There appears, however, to be no case on all fours with that now decided where the action is brought as between two tenants. The fact that the outside walls go with the demise would appear to operate against the plaintiff in this case unless there were mutual covenants which all the tenants could rely upon, and so far as can be gathered from the brief report the main ground of decision was trespass, owing to the projection of the plaintiff's building giving him the right *usque ad coelum* outside the walls. Possibly the editors of the Law Reports may see grounds for reversing their decision not to give an extended report of this case as it appears full of interesting points which can hardly be discussed on the short note in the *Weekly Notes*.

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc.

Whitstable and Tankerton Hospital.

Mr. George Browning, builder and contractor, of St. George's-place, Canterbury, was the general contractor for the Whitstable and Tankerton Hospital, which we illustrated in our issue for Dec. 24. We regret that his name should have been inadvertently omitted.

Revival of Rural Industries.

The third report of the Rural Industries Bureau, which has been published lately (price 4d.), covers the 18 months ended on September 30, 1926. The bureau is primarily an advisory body and information bureau. Its method, in general, is to suggest and demonstrate to country workers ways in which they can help themselves; and it acts in co-operation with county organisations. The Bureau's register of country craftsmen, started with the objects named in 1924, now contains the names of approximately 416 individual workers or industries, representing in all about 1,000 full-time and 500 or more part-time workers. They include blacksmiths doing wrought-ironwork, leather workers, hand-weavers, basketry, rush, and raffia workers, furniture-makers, and wood-workers, toy-makers, potters, metal workers and jewellers, embroiderers and needleworkers, book-binders, colour-printers, decorators, stone-carvers, model-makers, and others. An increasing number of inquiries is being received from retail shops, architects, and private individuals desiring to be put in touch with workers on the Bureau's books.

PROPOSED NEW BUILDINGS & OTHER WORKS*.

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T. for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

AUDENSHAW.—The U.D.C. passed plans: Twelve houses, Manchester-road and Hadfield-street, for J. H. Revell.

BALLYCLARE (ANTRIM).—Mr. J. J. Kirkpatrick, of Belfast and Ballyclare, co. Antrim, head of Kirkpatrick Bros., Ltd., has bequested £2,000 to his trustees upon trust to build or purchase small houses at Ballyclare, or in the neighbourhood.

BARNSTAPLE.—The T.C. has decided to erect 32 more houses at Fair View.

BATH.—The T.C. has made application to the M.H. for sanction to borrow £1,600 for alterations to the Swallow-street engine house.—The Council has leased a site for a sub-station at Hampton Hill House, Warminster-road—Application is to be made to the Housing Committee for permission to use a small piece of land near the railway arch in Monksdale-road for the purposes of erecting a sub-station and to the Education Committee for permission to use a piece of land attached to the school at South Twerton for a similar purpose.—The City Engineer has been instructed to report upon an application by the Electricity Committee for permission to erect a sub-station on land adjoining the allotments in Monksdale-road.—Mr. A. J. Taylor has submitted proposals for the extension of the Art Gallery and Libraries, which suggested the taking of the whole of the premises in New Market-row and a portion of the Provision Market and provide accommodation for the City Engineer's Department. The T.C. has agreed to this scheme.—Application is also to be made to the M.H. for sanction to the borrowing of the sum of £5,275, for the adaptation of premises at the Blue Coat School.

BATTLE.—The Housing Committee of the R.D.C. reported the Ministry has granted £6,370 for building houses in the district. The Council has approved the erection of six pairs of houses, two pairs at Sedlescombe, one at Ewhurst, two at Mountfield, and one at Crowhurst.

BIDEFORD.—The T.C. are to build 32 more houses at Handy Cross.

BILLINGHAM.—The U.D.C. are to make application for sanction to loan £94,842 for the erection of 222 houses.—The Public Offices Sub-Committee have inspected various sites between Cowpen Bewley-road and the Belasis-lane housing site, Haverton Hill, and have come to the conclusion that the most suitable and convenient for the erection of Council offices was a site adjoining Belasis-lane, 2½ acres of which they recommended should be acquired.—With reference to school accommodation at Haverton Hill, the Board of Education stated that they had informed the County Education Committee they were prepared to proceed as expeditiously as possible with consideration of the proposal for the enlargement of the Haverton Hill Council School.

BIRMINGHAM.—The purchase of Bingley Hall for £16,000 and of other property on the Easy Hill estate has been recommended by the General Purposes Committee to the City Council. The total amount involved is £32,29[illegible].

BOCKING.—The bridge is to be reconstructed and the Essex Highways Committee has estimated the cost at £13,816.

BOLTON.—The T.C. has approved of the following plans: Astley Bridge Cricket Club, for pavilion and tea room, at Thorns-road; J. Kenyon, for two houses, Belmont-road; A. E. Hargreaves, for garage, Chorley New-road; Leigh Bros., for streets and levels, off Ivy-road, and three houses and shops, off Ivy-road; F. C. Porter, for bungalow, Junction-road; Ramsden & Smith, for two houses, Greenmount-lane; Tootal Broadhurst Lee Co., Ltd., for extension to combing room, Adelaide-street; Kay & Co., for roof over yard, Blackhorse-street; R. Entwistle & Co., Ltd., for garage, back Washington-street; Parks Committee, for outbuildings, Leverhulme Park; Watch Committee, for alteration to Police Station, St. Helens-road; Mrs. F. M. Woods, for bungalow, Church-road; W. Andrew, for six houses, Wyresdale-road; J. Archer, for six houses, new Arterial-road, Tootil Bridge; J. Young & Sons, for workshop, Haworth-street; and H. Smith, for amended plan of house, Markland Hill.

BRADFORD.—The Watch Committee have appointed a sub-committee to go into the matter of the provision of new police quarters and courts.

BRENTWOOD.—The Essex E.C. are to provide a gallery, &c., at the County High School, at a cost of £700.

BRIDPORT.—The Bridport Cricket, Lawn Tennis, and Bowls Club has outlined the proposed scheme for the construction of a sports field. It is proposed to connect the present field with the one nearest to it on the north side, and to make a splendid field. An up-to-date pavilion is to be erected, hard tennis courts laid down, and a parking place for cars provided. The scheme is to cost about £1,500.

* See also our List of Contracts, Competitions, etc.

BRISTOL.—The M.H. has approved the application of the T.C. for the closing orders on properties at Albion-place, St. Philip's.

BROMLEY.—The T.C. has passed the following plans: H. R. Latter, house, Prospect-place; W. G. Boxall, house, Burnt Ash-lane; J. H. Bloomfield & Son, house and offices, Viscose Factory, Woldham-road; Waring & Nicholson, house, Hayes-lane; H. W. Norris, house. Bourne-road; Ecott, Widgery & Ecott, house, London-lane; T. E. T. Shanks, four houses, Hayes-lane; W. Braxton Sinclair, First Church of Christ Scientist, Widmore-road; D. Deadman, two houses, Burnt Ash-lane; W. Atkinson, two houses, Harwood-avenue Bromley Park Garden Estate; H. Durbin, four houses, Burnt Ash-lane.

BUCKFASTLEIGH.—The U.D.C. has decided to apply to the M.H. for provisional approval for the erection of about 20 non-parlour type houses for the working classes on the Three Corners site.

BURNHAM (ESSEX).—The U.D.C. has approved plans for houses for F. Agate (two), A. Cole (two), J. Halsey, J. H. Jackson, and P. Nicholls.

Chase Gardener & Co., two houses, Alexandra-gardens; H. J. Ladley, two houses, Denbigh-road; Roper, Son & Chapman, for three lock-up shops and two flats, Thornbury-road; W. Myring, house, shop and four garages, Inwood-road; W. Myring, lock-up shop and garage, Maswell-park; W. Ferris, two houses, Burlington-road; Roper, Son & Chapman, four shops with living accommodation, Bath-road; P. Chase Gardener & Co., two houses, Alexandra-gardens, and six houses, Sutton-lane; R. T. Warren, bungalow, Springwell-lane; Building Enterprises, Ltd., 30 houses, Spring-grove-crescent; W. Hearn & Chuter, two houses, Wood-lane; P. F. E. Carter, 16 houses, Cranbrook-road; Perry Bros., three shops, Spring-grove-road; R. T. Warren, block of four houses, off Springwell-lane; J. Montgomery, 12 houses, Whitton Dean; P. Chase Gardener & Co., two houses, Twickenham-road; R. Emmett & Son, house, Wellington-road South; Cartwright & Son, 27 houses, Parkside estate; W. Harbrow, 42 houses, Victoria-gardens and Alexandra-gardens; W. Harbrow, 38 houses, Summer-house-avenue and Alexandra-gardens; Perry Bros., three houses, Vicarage Farm-road; C. Scott, shop and house, Kingsley-road; P. Chase Gardener & Co., two shops, Heston-road; P. Watkins, four houses, Great West-road Extension; P. Chase Gardener & Co., open market, Bell-road; H. Allen, 46 houses, Bulstrode-avenue; W. A. Harris, house and shop, Heathdale-avenue.

HORSHAM.—With regard to the provision of a smaller type of house for re-housing purposes in connection with slum clearance, the U.D.C. has instructed the surveyor to submit the outline of a scheme at the next meeting to deal with about 20 houses.

HOWDEN.—The R.D.C. has estimated £36,364 for the widening of the road from Howden to Holme-on-Spalding Moor. This length of road is just over seven miles, and will form an important highway between the two Ridings, on the completion of the Boothferry Bridge. The work is to be carried out by the East Riding County Council.

HULL.—The T.C. passed plans: J. Emmerson, 18 houses, Boothferry-road; H. Spruit, 28 houses, Somme-street, and Aisne-street; E. Mowforth, eight parlour-type houses, Ormonde-avenue; W. Addy, six parlour-type houses, Boothferry-road; J. Wilson, two parlour-type houses, Dundee-street.

KETTERING.—The U.D.C. has passed plans: A. R. Linnett, house, Kingsley-avenue; Kettering Cricket Club, pavilion on their ground; Miss E. Spencer, bungalow, Cromwell-road; Smith Edmunds & Co., four houses, Cornwall-road, and three houses in Clarence-road; E. A. J. Lantsbery, house, Cornwall-road.

LEEDS.—The T.C. has resolved that the Finance and Parliamentary Committee be requested to make application for sanction to the borrowing of £68,172 in respect of the following works: Construction of Middleton reservoir; construction of Tinshill reservoir; construction of Tinshill overhead tank; laying of 20 in. main, Bramley reservoir to Whingate; laying of 12 in. main, Headingley pumping station to Tinshill, &c.—The City Engineer has submitted designs for further type A2 houses and type A2 and A3 cottage flats, and the Council has resolved that the designs be approved, and that the lay-out plans now submitted for the erection of approximately 800 houses on the York and Selby-road housing estate, and 100 type B, 50 type A3 and 48 type A2 houses on the Meanwood housing estate, be approved, subject to the approval of the M.H., that tenders be invited for the erection of the houses, and that the question of applying to the M.H. for sanction to borrow the necessary money for street and sewering works in connection therewith be referred to the Finance and Parliamentary Committee.—The Town Clerk submitted communications from the M.H. as follows: Approving the application for sanction to borrow the necessary money for alterations and extensions at the tuberculosis dispensary, and for arrangements for the provision of electricity for heating and lighting at Killingbeck Sanatorium.—Approximately 1,386 sq. yds. of land on the Meanwood housing estate is to be sold to J. A. Bonner for the erection of three houses and shops thereon, subject to the approval of the M.H.; also 1,511 sq. yds. of land off Stonegate-road, near King-lane, is to be sold to H. Mackenzie Frazer, for purposes in connection with housing, subject to the approval of the M.H.—The Council has also resolved that the plans now submitted by H. S. Chorley, architect, for an extension of the depot in Swinegate, at the estimated cost of £122,500, including architect's fees, be approved, and that the question of applying to the M.T. for sanction to borrow the sum of £137,500 for building and equipment be referred to the Finance and Parliamentary Committee.—800 sq. yds. of land situate off York-road is to be sold to E. S. Rogers for the erection of two dwelling-houses thereon.—Arrangements have been made with G. W. Atkinson, architect appointed for the erection of new workshops, &c., at the junction of New York-road and Bridge-street, to proceed with the preparation of the necessary plans.—Tenders are to be obtained for the annual cleaning and painting of police and fire brigade premises.—The General Manager of the Tramways Committee has reported as to the provision of tram shelters, and instructions have been given for designs and estimates of cost to be submitted.—Tenders are to be obtained for the provision of a reinforced concrete roof for the storage reservoir at Bramhope.—Application is to be made to the M.H. for sanction to borrow £80,000 for the erection of 160 more houses on the Wyther housing estate.—The M.H. has sanctioned the borrowing of £1,420 for the erection of a fence at West Leeds High School.—The T.C. has resolved that two shop sites situate in Station-road on the Cross Gates housing estate, containing an approximate area of 382 sq. yds., be sold to H. Hick, subject to the approval of the M.H.—The Council state that they have no objection to the proposal from the Meanwood Estate Tenants' Association to erect a central hall on the estate.

LUTON.—The R.D.C. has passed plans for 12 houses, Luton-road. Houghton Regis; a bungalow and village hall, Whipsnade; three bungalows, Houghton Regis; tea room, Dunstable Downs; two houses, Montrose-avenue.

MALDON AND MERTON.—The Wimbledon Electricty Department have made application to the U.D.C. for permission to build a sub-station on the site between 7 and 9, Martin Way.

MANCHESTER.—The Corporation has purchased ten acres of land for the North Manchester Municipal School for Boys at Chain Bar, Moston. The cost of the erection of the school, which is for 500 places, will be £60,000.

MANSFIELD.—The T.C. have approved the following plans: Mansfield and District Miners' Welfare Committee, reading room, covered-way and extra lavatory accommodation at Berry Hill Hall; G. Day, house, Sutton-road; J. Wainman, storeroom, Midworth-street; Welbeck Estates Co., Ltd., cartshed, Sutton-road; the Trustees of Mansfield St. Peter's, latrine accommodation, St. Peter's School, Church-lane; the Standard Co., Ltd., engine shed and store, Ratcliffe-gate; A. Farnsworth, two houses, Southwell-road; Mansfield Brewery Co., Ltd., additions to "Reindeer Inn," Southwell-road, and for proposed alterations to a shop on the south-west side of West Gate, for A. E. Gee.

MERROW.—Work will shortly be commenced on the laying out of a large housing estate at Merrow. Recently negotiations have taken place between C. A. Burlingham, architect, and the trustees of the Hospital of the Blessed Trinity, Guildford, and as a result the former has acquired, at a figure exceeding £13,000, large areas of land on the south side of the main Guildford-Leatherhead-road, and on either side of Trodd's-lane. This land was part of Hall Place Farm, the property of the Hospital, and it is the intention of Mr. Burlingham to erect houses of a country residential character.

MIDDLESBROUGH.—W. S. Gibson is erecting a picture theatre to seat 900 persons on the edge of the Martongrove building estate.

MOLESEY.—The M.H. is to hold an inquiry into the application of the Molesey District Council to acquire compulsorily land at Green-lane, West Molesey, for the purposes of a housing scheme.

NEWTON ABBOTT.—The U.D.C. has approved the following plans: Bungalow, Higher Gabwell, Stoke, for E. Andrews; bungalow, Kingsteignton, for C. Boucher.

NEW THUNDERSLEY.—The Essex E.C. are to purchase a site at £270.

NORTHAMPTON.—The C.B. recommend that the Council do approve an additional expenditure of £1,100 by the Northamptonshire (Town and County) Association for the Blind for the adaptation and improvement of the workshops in Gray-street. The Council resolved to recommend that application be made to the M.H. for sanction to borrow £550 for the work.—The Borough Engineer has reported that about 240 houses required slight external and the majority internal repairs, and the Council resolved that tenders be invited for the work.—It has been resolved to recommend that alterations be made to the horse repository at the Cattle Market, as indicated on the Plans submitted by the Borough Engineer, at a cost of £400, and tenders invited for carrying out the work.—plans passed: House, Chestnut-road, — Jordans; two houses, Lime-avenue, Stafford & Agutter; 14 lock-up garages, 38, Grafton-street, H. Westley; four houses, The Crescent, C. H. Rainbow; loading warehouse, Lea-road, J. Sears & Co., Ltd.; two houses, St. George's-avenue, A. P. Hawtin & Sons, Ltd.; 20 houses, Loyd-road, Northampton Co-operative Society, Ltd.; house, Woodland-avenue, H. E. Dickenson; house, Clarence-avenue, H. Holloway.

NORTHOLT.—A plan has been submitted to the Council for the lay-out of an estate off Northolt-road, adjoining Parker's Farm, by Dawson & Baker, partly in the Uxbridge Rural District and partly in Harrow. The whole was included in the Harrow Town-Planning Scheme, and in the area being applied for to be transferred to this district. The Council has agreed to the recommendations of the Surveyors' Committee (1) approving the lay-out of the estate under the Town-Planning Scheme Interim Development Order; (2) to inform Messrs. Dawson & Baker that they must submit plans of that portion which is in the Northolt parish to the Uxbridge Rural District Council for approval.

NOTTINGHAM.—The Housing Committee of the T.C. have passed a suggestion in connection with the clearance of the Red Lion-street area and the New-road (Parliament-street to London-road), that, after rehousing dispossessed people at the Cardale-road site, there will be available a portion of land for the erection of 80 houses, and that the "principle of the erection of 80 houses" there should be accepted, with a report later as to their estimated cost.

ODSAL.—The Bradford Corporation propose to erect further houses upon the Odsal site and 48 more at Scholemoor.

PENARTH.—The U.D.C. passed plans: Barclay's Bank, Ltd., bank premises, Market-square; Cumberland C.C., office and depot, Norfolk-road.

PREESALL.—The U.D.C. has received sanction from the M.H. for 20 houses at Knott End.

PRESTON.—The sub-committee of the Preston E.C. has received sanction from the M.H. to the borrowing of £21,977 for the erecting of the proposed Deepdale-road Central Council School.

REDCAR.—The North Riding C.C. is making application to the M.H. for permission to borrow £1,050 for the erection of a special subjects block at the Redcar James Mackinlay Council Central School.

REIGATE.—The T.C. passed plans: L. E. Williams, house at Gatton Point, Redhill, for Mrs. F. Boldero; P. J. Wetton, house at South Park, Reigate, for Miss A. M. Winter; W. Farmer, pair of houses in Althorne-road, Redhill, for C. D. Wellicome; V. Hooper, house, Waterlow-road, High Trees estate, for Hayden & Randall; and cottage, rear of Old Barn, London-road, Redhill, for W. Lees Stenning.

ROTHERHAM.—The Corporation are proposing a scheme for the erection of 200 houses in the Meadow Bank district.

ROTHWELL (YORKS).—The U.D.C. are seeking to acquire land at The Pastures for the purpose of constructing new open-air swimming baths.

RUGBY.—The R.D.C. has decided to build thirty-two more houses at Croop Hill, New Bilton, four at Stretton-on-Dunsmore, and eight at Marton.

ST. ASAPH.—The R.D.C. has passed plans: Three pairs of semi-detached houses in Princes-road, Rhuddlan, for T. H. Roberts; three pairs of semi-detached houses in Shore-road, Meliden, for T. E. Jones; bungalow, on the Brynhedydd estate, Rhuddlan, for H. A. Scott; two pairs of semi-detached houses on the Merllyn estate, Rhuddlan, for E. H. Weaver.

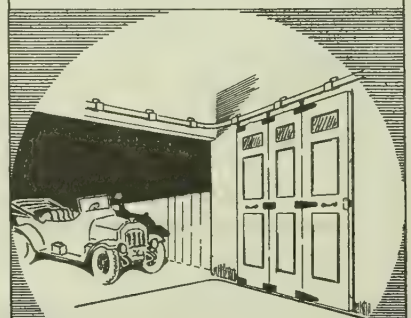
ST. HELENS.—The T.C. passed plans: Eight houses, 113-127, Doulton-street, J. B. Williams; four houses, 142-144, New-street and two adjacent houses along intended street, R. Heward; two houses, Prescot-road (corner of Margery-street), R. Garner and another; two bungalows, Hoghton-road, Miss E. Walsh; four houses, Beaconsfield-road, Ainge, Butterworth, Barlow & Scott; 14 houses, 126-152, Doulton-street, J. B. Williams; eight houses, Bishop-road, I. Griffiths; six houses, 2-12, Moorfield-road, Jos. Vose; two houses Haresfinch-road, United Building Co.; eight houses, Ainsworth-road, Greenough Bros.

SHEFFIELD.—The plans are now completed for the erection of the proposed new extended fire station on the site at Rockingham-street and Division-street, at an estimated cost of £30,000.—The Plans Committee will shortly have before them the new scheme drawn up by the Provincial Cinematograph Theatres, Ltd., for their cinema in Barker's Pool. A residence for the manager will be erected on the site, and there will be a large domed roof. There will be also additional seating accommodation.—A picture palace to accommodate 1,500 persons is to be built on the Manor Estate, at the corner of City Ridgeway and Prince of Wales roads.—The T.C. has passed plans: Two houses, Pingle-road, for T. H. Bailey; six houses, Dalewood-road, for A. J. Belton; six houses, Little Norton-lane, for J. H. Dyson; six houses, Hackthorne-road, for S. Hogg; two houses, School Green-lane, for G. M. Taylor; two houses, Forres-street, for L. Green and J. N. Padley; two houses, Reservoir-road, for H. Hawley; two bungalows, Hunters'-lane, Intake, for J. L. Hanstock; two houses, Cairns-road, for Spooner & Harrison; six houses, Greystones-road and Bingham Park-road, for W. Malthouse, Ltd.; two houses, Tapton-bank, for L. J. Samuel; bungalow, Talmont-road, for E. Wright; house, High Storrs-road, for G. C. Glossop; six houses, Norton Lees-road, for W. C. Mander; house and garage, Knowle-lane, for Mr. Benson; house, Herries-road, for A. Horsfield; house, Herries-road, for Dr. F. S. Hardy; three houses, Folds-lane, for J. V. Auckland; two houses, Cartmell-road, for J. Enock; house, High Storrs-road, for G. C. Glossop; bungalow, Talmont-road, for E. Wright; two houses, Charles Ashmore-road, for G. R. Parkin; 10 houses, Charles Ashmore-road, for J. H. Dyson; six houses, Norton Lees-road, for W. C. Mander; four houses, Struan-road, for Plant Bros.; four houses, Chesterfield-road, for C. Leadbeater; 26 houses, Huntley-road, for J. Ramsden; six houses, Muskoka-drive, for G. M. Taylor; six houses, Bingham Park-road and Greystones Hall-road, for Wm. Malthouse, Ltd.; two houses, Smithywood-crescent, for J. J. Hawksworth; two houses, Holyoake-avenue, for S. Sanderson; two houses, Arbourthorne-road, for Mason & Robinson; six houses, Crawford-road, for T. Leadbeater; two houses, Ford-road and Dobbin Hill, for F. Bush; four houses, Mansfield-road, for W. Croft; six houses, Patmore-road, for T. Pye; house, shops, and store, Fairway, Manor estate, for G. H. Needham; three houses, Folds-lane, for J. V. Auckland; house and garage, Pingle-road, for G. H. Bodell; bungalow, Abbey-lane, for A. Tate; house, Police Station, and garage, Hammerton-road, Doddstreet and Trickett-road, for the Watch Committee of the Sheffield City Council; two bungalows, Dalewood-road, for J. March; two houses, Brooklands-avenue, for I. R. Dixon and Mrs. E. Wardingley; six houses, Brooklands-crescent, for L. W. Pye; six houses, Laird-road, for T. Pye; two houses, shops, and six garages, Ecclesall-road South, for W. Ramsay; six houses, Dalewood-road, for Smith & Hawley; 10 houses, Dalewood-road, for A. J. Belton; house, shop and stores, Middlewood-road, for G. E. Smith; four houses, Moorcroft-road, for J. J. Boyd.

SHEPPERTON.—The Staines R.D.C. has approved a scheme for the erection of 20 houses.

SOUTHAMPTON.—The Co-operative Society has purchased a block of premises in St. Mary's-road, together with six cottages, which is to be developed into a large emporium.

SOUTHPORT.—A new Labour Exchange is to be erected and plans have been passed for new premises to be erected in Princes-street, and tenders for the building are now under consideration.



SOUTH SHIELDS.—It is intended to start a scheme for building a new church in the parish of St. Francis, South Shields, on the south bank of the Tyne, near the entrance to Tyne Dock. The vicar, the Rev. F. H. Warner, would welcome any help from outside the parish.—The Borough Engineer has laid before the T.C. an estate plan submitted by T. A. Page & Son, architects, for A. Holmes & Co., for proposed lay-out of 44 building sites, on land belonging to the Ecclesiastical Commissioners for England, bounded on the west by Mortimer-road, on the east by land abutting King George-road, and on the north and south by proposed 24 ft. roads, designated Page-avenue and Stanton-avenue, respectively. The Council has approved the plan.—Plans passed: F. W. Newby, for Henderson Bros., 24 semi-detached houses on land between Harton-lane and Mortimer-road, viz., Grasmere-gardens, Ambleside-avenue, Windermere-crescent, and Buttermere-gardens; H. Hill, for Jacob Reay and J. Strother, two semi-detached bungalows, Armstrong-avenue, Harton Hall estate.

SPALDING.—The R.D.C. has decided to accept the offer of four acres of land, at £85 per acre, on a local estate, for housing purposes.

SWAFFHAM.—Application is to be made to the M.H. by the U.D.C. for the erection of 14 houses on the Sporle-road housing site, and for the borrowing of £6,500 for the scheme.

THORNHILL.—Messrs. James Austin & Sons (Dewsbury), Ltd., have purchased the Thornhill Forge estate, upon which to erect new and modern buildings.

TILBURY.—The Essex E.C. recommend the erection of new buildings at St. Chads, at a cost of £13,520.

TONBRIDGE.—The R.D.C. has accepted tenders for the erection of 10 houses at Hadlow, 10 at Pembury, six at Petteridge, and six at Hildenborough.

TOTNES.—The R.D.C. has decided to submit a scheme to the Ministry for 32 houses—Marldon, 12; Ugborough, 2; Churston, 8; Dittisham, 4; Holnes, 4; Brent, 2.

TRAWDEN.—The U.D.C. are to apply to the M.H. for sanction to their proposal to erect 24 houses on land at Skipton-road.

TYNEMOUTH.—The T.C. has approved a conditional recommendation for application for sanction to borrow £54,000 for the conversion of pail-closets to the water carriage system.

WALTHAMSTOW.—The Essex Housing Committee are to provide heating apparatus at the tuberculosis pavilion, at a cost of £158.

WARRINGTON.—The T.C. propose to erect a further 10 houses on the Reynolds estate and 156 houses on the Bewsey estate.—Funds are being raised by St. Barnabas' parishioners for the proposed erection of a church hall, estimated to cost £2,500.

WARWICK.—The R.D.C. has received a letter from a Coventry architect stating that a client of his contemplated building 182 houses on the Whoberley estate, and as the present subsidy ends next October, he asked if the Council would apply to the Ministry of Health to grant subsidies for those houses. The architect said he hoped to send in plans for 35 of the houses for the next meeting of the Council. The Council expressed themselves as favourable to the proposal, and as there is other prospective house building in the district, it was decided that the Council apply for the granting of subsidies for 250 houses.—Plans passed: Six houses, Grove-avenue, for R. W. Messenger; 10 houses, Woodside-avenue, Green-lane estate, for T. Bates & Son; two houses, Lime-street-avenue, for Mr. Bayliss.

WEST HARTLEPOOL.—The T.C. passed plans: J. T. Atkinson & Son, new warehouse, sheds, cells, &c., on land rear of Baltic-street; S. Handley, house, Elwick-road; C. R. Kindberg, house, Eldon-grove; Mrs. Richardson, semi-detached house, Station-lane, Seaton Carew; J. G. Atkinson, two bungalows, Oakland-avenue; C. Turnbull, six pairs of semi-detached houses, Fernwood-avenue.

WILLESDEN.—The M.H. has agreed to the raising of a loan of £20,351 for the erection of a small-pox hospital at Kingsbury.—The Council recommend that the officers be authorised to re-submit to the M.H. the Council's proposals for the erection of flats on the baths site, Stafford-road, Kilburn, with a view to co-operating with the Willesden Housing Society in the reconditioning of houses in overcrowded areas in Kilburn.—The Engineer has submitted a plan and estimate for the erection of a two-storied convenience on the south side of the flight of steps adjoining Kensal Rise Station, with an entrance for women from the steps from Chamberlayne-road, and for men from Station-road, and the Council has now instructed him to obtain tenders for the building.—Plans passed: Six houses, four in Aylesbury-street and two in Verney-street, Neasden, for The Metropolitan Railway Co.; eight houses, Neasden-lane, Neasden, for F. Cattran; shop with two flats over, 53 and 55, The Broadway, Cricklewood, by W. N. Lewis, for Mr. Downham; four houses, 116, 118, 120 and 122, Furness-road, Harlesden, for E. W. Jermey; preliminary plan of building line for five shops, Neasden-lane, Neasden, for F. Cattram; four houses, Donnington-road, Willesden, by J. A. Burrell, for A. L. Tolcher; house, 23, Homestead-park, Dollis Hill-lane, for W. E. Sanders; house, Deerhurst-road, Cricklewood, for C. W. B. Simmonds, Ltd.; four houses, Mount Pleasant-road, Brondesbury, for C. W. B. Simmonds, Ltd.; five houses, 101, 103, 105, 107, and 109, Brondesbury-park, by F. Stanley Allen, for Western & Arnell.

WOLVERHAMPTON.—A proposal to erect temporary accommodation for 250 children at a cost of £1,500, and simultaneously to proceed with a permanent block of school buildings to accommodate 400 children, at a cost of £15,000, at Low Hill Housing estate, Bushbury, has been adopted by the E.C.

WORCESTER.—The City Council has made application to the M.H. for sanction to borrow £8,775 for improvements to the Cattle Market.

WYKE.—The Bradford Corporation are to erect 350 houses on the Shirley Manor estate by direct labour, at an estimated cost of £177,000.

YORK.—The T.C. passed plans: W. E. Puckering, two houses, Carrington-avenue; A. Temple, house, Emerald-street; A. Temple, new lay-out, Lindley-street and Murray-street; J. Allison & Sons, amended plan of bungalow, Barmby-avenue; H. Leetham & Sons, Ltd., warehouse, Walmgate; W. Johnson, house, Finsbury-street.

FIRES.

COLCHESTER.—Culver-street Wesleyan Church has been completely destroyed by fire. Only the bare walls remain standing, and the damage is reported to be in the neighbourhood of £15,000.

LEICESTER.—By a fire which occurred at the premises of W. H. Smith & Sons, Campbell-street, Leicester, damage has been estimated at from £10,000 to £15,000.

LEISTON (SUFFOLK).—Leiston Hall, situate within twenty yards of the parish church, Leiston, Suffolk, has almost entirely been destroyed by fire.

MANCHESTER.—Damage estimated at between £25,000 and £30,000 has been caused by a fire which broke out at the Winter Gardens Cinema, Peter-street.

TONBRIDGE.—The Public Hall Cinema, High-street, Tonbridge, has been practically destroyed by fire. The cinema forms part of the Public Hall building and the total damage done is estimated at nearly £10,000.

National Association of Clayworks' Managers.

At the request of a number of prominent owners and managers connected with the brickmaking industry, Mr. S. McPherson (who organised the Institution of Quarry Managers and is its General Secretary) has undertaken to organise the National Association of Clayworks' Managers, with the object of combating the menace to the industry threatened through foreign competition.

Free Lime in Hydraulic Cement.

The Department of Scientific and Industrial Research have issued "The Determination of Free Lime in Hydraulic Cement," by P. L. Braby, M.Sc., and F. J. McConnell, published by H.M. Stationery Office, price 6d. net. Numerous experiments upon Portland cement have been carried out, and it has been found that the destructive action of fire on concrete depends on two main causes—one of which is the presence of free lime. The tests described in this paper afford valuable evidence on the conditions and probable behaviour of set and unset cements.

Competitions for Painters and Decorators.

The National Painters' and Decorators' Joint Education Committee of England and Wales announce their annual prize competition for apprentices and craftsmen, to be held in October, 1927. The competitions are now open to all apprentices, journeymen and employers in England and Wales who come within the respective ages classification, provided that they are definitely engaged in or preparing to follow the craft. There are four classes, together with a preliminary class, ranged according to age. Full particulars may be obtained from Mr. Will Mellor, Secretary, National Joint Education Committee, 9, Albert-square, Manchester.

A London Carillon.

New premises for Messrs. J. & E. Atkinson perfumers, have just been completed at 24, Old Bond-street, W.1. A feature of the building is a steeple containing a carillon made and hung by Messrs. Gillett & Johnston, of Croydon. Messrs. E. Vincent Harris, F.R.I.B.A. and J. H. G. Stanborough are the architects for the work, and Messrs. E. A. Roome & Co., Ltd., are the builders.

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Aberdeen.—COLLEGE.—The Governors of Robert Gordon's Technical College have agreed that the Technical College building scheme be proceeded with as soon as possible at an estimated cost of £103,000, including the cost of buildings, apparatus, equipment, architect's fees, and clerk of works' salary. The Governors agreed, on the recommendation of the Buildings and Finance Committee, that Mr. R. Leslie Rollo, principal teacher of architecture in the College, be appointed architect for the works.

Aberdeen.—HOUSES.—The Housing Committee of Aberdeen Town Council has approved of a scheme to provide 1,000 new houses. The scheme is for the erection of 250 blocks containing four dwelling-houses of three rooms, a kitchen, and a bathroom. The houses, which will be erected mostly at Hilton and Catofield, will be built of bricks, roughcast, and will cost £390 per dwelling, or £1,560 per block. The scheme has been approved by the Scottish Board of Health.

Dundee.—ALTERATIONS.—Extensive alterations are being carried out at the Kinema, Tay-street. A new entrance will be constructed. The hall will be entirely re-seated and a new gallery built to seat 160 people.

Edinburgh.—BUILDING.—The Dean of Guild Court has granted warrants for the erection of six bungalows at Traquair Park, Corstorphine; bungalow at Oxgrange-road, Fairmilehead; bungalow at Roull-road, Corstorphine; and four bungalows at Braid-road. Permission has also been granted to the Craigmillar Creamery Co. to erect a cold store at Craigmillar.

Glasgow.—COLLEGE.—In pursuance of the scheme for the establishment of a Scottish National Commercial College, a site has been purchased in Glasgow at a cost of £14,500. It is hoped that the new building, which will have frontages to West Regent, Pitt, and Jane-streets, will be completed by the summer of 1928. The new building is expected to cost about £100,000, and the Scottish Education Department has approved the scheme, and agreed to pay 25 per cent. When completed the new college will take the place of the West of Scotland Commercial College, now housed in the Athenæum.

Glasgow.—VARIOUS.—Plans passed: Hall and committee rooms, at Battlefield-road, at Cathcart-road, for Cathcart Divisional Labour Party; eight semi-detached villas at Kelburn-avenue, Dumbreck, for Taylor & Wilson, Cardonald; filling station at Cumbernauld-road, for North Eastern Automobile Co.; sub-stations at Ralson-drive and Aitkenhead-road, for Corporation Electricity Department; houses at Arklet-road, Langlands, for Corporation Housing Department; 182 houses to south of Southampton-drive and Winchester-drive, for Messrs. Mactaggart & Mickel, Ltd.

Kirkcaldy.—HOUSING.—The Kirkcaldy District Committee of Fife County Council has agreed to proceed with the erection of 396 houses, and to make applications to the Scottish Board of Health and the County Council for their consent to these proposals. The expenditure involved is estimated at £158,400. The houses are to be erected within the Kirkcaldy district.

Obituary.

The death has taken place of Mr. C. A. Hendry, retired surveyor, who was a well-known member of the building trade in Inverness and the North. He was over eighty years of age.

Leeds Building Exhibition.

Through the medium of *The Yorkshire Post*, a Building Trades Exhibition will be held in Fenton-street Drill Hall, Leeds, from Wednesday, the 12th inst., to Saturday, the 22nd inst. One of the main features of the Exhibition will be a building incorporating and illustrating the various ways of adopting standard products.

BUILDING TRADE WAGES IN SCOTLAND.*

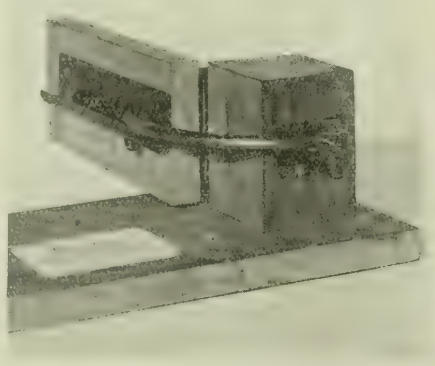
JOHN A. TARRY, LTD. (218,262). Registered December 17. 75, Beresford-road, Chingford, E. 4. Builders and estate developers. Nominal capital, £2,000.

WOMEN DECORATORS, LTD. (218,212). Registered December 15. 28A, Park-road, Upper Baker-street, Marylebone, W. Decorators, repairers, fine art dealers, &c. Nominal capital, £100.

TRADE NEWS

WE have received from Messrs. Rhodes' Chains, Ltd., their new brochure "Sash Hanging to Perfection," being a concise standard formula for hanging D.H. sashes with pulleys and chains.



We give here an illustration of Rhodes' steel-sleeve axle pulley with solid brass face-plate—part of one of the rustproof steel cheeks being cut away to make visible the fixed ½ in. solid steel-sleeve on which the wheel runs as easily as on a ball bearing. There are no parts to break or get out of order. Full information may be obtained from the makers at 26, Charing Cross-road, W.C.2.

Warwickshire Trunk Roads Scheme.

We quote from the notes of Mr. D. H. BROWN, the Warwickshire County Surveyor, who is handling the above scheme, the following passage:—"On the Stonebridge to Allesley section were tested the qualities of Winget's new open drum mixer, which has been doing yeoman service on this part of the scheme. An average output from this machine, which is the 7/5 model run by a 5 h.p. 'Lister' petrol engine, of more than 80 cu. yards of mixed concrete per day has been got." The mixer in question is the product of Messrs. Winget (1924), Ltd., of Grosvenor-agrdens, S.W.1, who specialise in road-making plant.

Automatic Door Catches.

Messrs. Teekay, Ltd., of 336, Gray's Inn-road, have brought out an automatic door and gate catch, "The Auto-catch," designed to hold doors (such as garage, greenhouse, street and kitchen, garden gates, &c.) open without the

necessity for fiddling with hooks and bolts. The fittings are made in two sizes, one for medium-sized doors and gates, and also an extra heavy set for large garage doors, &c. Full details will be sent upon request.

TENDERS.

Communications for insertion under this heading should be addressed to "The Editor," and must reach him not later than Tuesday evening.

* Denotes *accepted.* † Denotes *provisionally accepted.*
‡ Denotes *recommended for acceptance.*

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXII.—No. 4380. JANUARY 14, 1927

THE PROMISE OF THE NEW YEAR

HOW should we best write of the old year, and from what point of view of the new year just dawning? We are so near to it all. And yet, as each day's dawn takes on a new virginity, so for most of us there is the feeling at such a time of a new beginning, an unwritten page, which it is within our choice to fill well or badly. May we dare to hope the auguries are favourable, and holding the balance fairly, as between what has been and may be in the future, and looking into it without fear or pessimism, conclude there is to be found what may well encourage us? Failure is nothing when we learn how to use it, and in spite of the misfortunes of recent years, the recent coal strike, our widespread divisions, there is to be found nevertheless, in many directions with which we are concerned here, much that may reassure us. For the interests of art have been shown increased attention. The struggle for Waterloo Bridge, the saving of the City churches, the movement inaugurated for the preservation of rural England, the increased importance attaching to craftsmanship, and the new Bill for the Registration of Architects, to mention a few instances only, point to a very active concern in important directions.

The successful issue of the struggle for the City churches was a red-letter day in the annals of the past year, and the expression of a deeply felt conviction that something more was concerned even than the churches themselves, for if it was granted historical buildings could be removed for the purposes intended, there was no security for any national building. We think, from some discussion with prominent clergy, they have not enough realised that objections to the measure included the conviction of the importance of preserving national traditions, which express in another sense religious convictions as well. It has been said that religion and art are names for the same experiences, and the Church may learn from this to regard this side of her ministrations with deeper respect; for it is not to the advantage of religion to destroy the witness of it in the past in order to promote it in the present.

Waterloo Bridge is another of those cases to which consideration other than utilitarian had to be given. The matter still awaits final decision, and we recognise that to parapet the bridge out, or otherwise to alter it, is not altogether to save it. At the same time, the discussion has strengthened the view in favour of the retention of existing monuments whenever possible, and a conservative attitude towards them.

The decision for it having been reached, we must hope the Registration Bill will effect some amelioration of bad conditions. In making architecture a close profession, it is no doubt with the earnest desire to promote the interests of better building. It prevents no one from building, it prevents only the use of the name of architect—except to those qualifying under Institute requirements. To the objections to thus tying up architecture it may be replied that the disfigurements of the incompetent have made it necessary. Can we not in almost any district detect the architect-built house, both by its better taste and building, and also alas! by its rarity. The profession has accepted the proposed legislation with almost complete unanimity, and to those who plead that exceptional powers in the individual are just those least likely to accept official ruling and to suffer under the subjectivity of institutions, it may be answered that the time is none the less one of emergency and for the general good we must accept this closer rule for the profession. Constituted authority, it has to be admitted, does not like exceptional men who move outside its own orbit, and we must be careful to leave the way open to men of genius, for the gods come often in strange disguises. But the monument raised to the greatest powers will ever be outside and above what institutions and official endorsement can bestow, and is best expressed in the terms of that classical inscription, "Si monumentum requeris perspice."

Late—but not too late—the movement for the preservation of rural England has been inaugurated. It is an object for which we have pleaded continually over past years in these columns and, we venture to think, not without its effect in moulding public opinion. Rural England, which has already suffered so terribly through the disfigurements of commerce and the vagaries of ignorance, needs the support of a powerful body to preserve this national heritage from further destruction and disfigurement, and we welcome the efforts of the R.I.B.A. in this direction.

The steps taken by the Institute during the past year for the better support and recognition of personal craftsmanship, if not of much account in themselves, are none the less an assertion of the importance of the relationships between the two, so vital to the prospects of either. It is a recognition of a lack in the more vital characteristics of craftsmanship, at the same time that the craftsman revealing these better attributes has found so little opportunity for his work; reliance being placed on the more conventional product, the mostly flaccid reproductions of the "office" drawing. So that a sort of flat rate for craftsmanship had become the habit, into which the spirit of the artist was hardly found to enter. We welcome, therefore, present efforts to call more attention to the nature of craftsmanship, and to seek for its more endowed expression. But most of all must we depend on the entrance of a new spirit on either side. We need the heart of the artist to penetrate the arts with a deeper conviction, arising out of a stronger faith in life and its inspiration and delight in its labours.

This is but to touch on a few of the directions in which we see some life and movement. There is still the tendency to avoid the opening out of questions that press for solution, the hesitation of the official mind, and institutions generally, to allow awkward discussion. This can only be met by greater personal responsibility in each of us. For it is not through any lip service to ideals, or complacent optimisms that we can lift present adversity into well being. The arts should be the first to appeal for this greater reality. The ideals of architecture!—ah, but let us see the building. The ideals of craftsmanship!—but let us see the craftsman's work. We can only teach justice by being just ourselves, and words count to-day for so little. The Victorian era, it has been said, was largely the exploitation of virtue, when the cry of prosperity replaced that of humanity; that it was not its vices, but its virtues that brought it in 1914 crashing to the ground.

For the questions that compel solution, democracy and industry can only answer together, and the issue is how to unite them so that they function better. May we not look to the arts to set the example of better values, more corporate endeavour, so that they become the rallying-point between the two? On this we believe rests the promise of the future. Institutions cannot achieve this for us, but the personal responsibility of each one of us can do it. Let us, therefore, face the new year with the purpose to give more reality to our beliefs.

NOTES

New Year Hopes. We all look forward with something like hope at the beginning of a new year, and if, with the memory of last year's woeful happenings and the difficulties which confront us in the future, we still find the British people full of hopefulness and confidence, it is because there is something inherent in the British race which justifies that confidence and that hope. It would ill become a paper like *The Builder* to estimate lightly the practical side of life, but it may be permitted to remind ourselves when we mark another milestone in the march of time that we should keep in view an ideal of life and endeavour which shall help to spread some radiance and hope over the way we have to go. It is easy to belittle the aims of the idealist; it is none too easy for the idealist to preserve his hopes. But we hope and believe that underlying all his practical nature and too materialistic outlook, the real Briton has a belief in the ideality which can alone make life worth living.

Enthusiasm and Practice. In the reading of the very interesting paper by Mr. Drysdale on the late Leonard Stokes we could not help feeling that there was something essentially typical of the national character in Leonard Stokes. Mr. Drysdale says: "An artist always rather than a scholar, his feelings were always his guide. The essence, not the thing created, the soul rather than the outward form, were what he seemed to strive for. Appreciation for materials, the elementary pleasure of the senses, rather than only the desire for perfect form; the expression of the dumb life in stone and wood, of mass in equilibrium, rather than the display of knowledge, appealed to him in building. Coming at a time when the enthusiasm created by what is now known as the Battle of the Styles was growing somewhat thin, influenced by Ruskin perhaps, his effort was towards the humanising of the Revivalist correctness by means of proportion and affection for the material. He found Pugin cold and thin, but greatly admired Bentley, Bodley and Garner's work. and that of Temple Moore. Norman Shaw and Pearson were also among the gods. All names which appeal by the human charm of their art rather than its archæological correctness. An enthusiast who was always ready to test his feelings for architecture by reason and by the discipline of practical common sense. His was not the enthusiasm of the dreamer, rather of one whose work is to look after the small things of the day."

Educational Ideals. If we suggest that even in middle or old age men may preserve and cherish some ideals, how much more important it is that our students shall start their careers holding aloft a high standard of ideality which may always cast a radiance of hope and pleasure over their way. The cultivation and encouragement of this might well be the main endeavour of the schools. Because a right appreciation of the practical necessities of sound building, of the economics of outlay, of wise and careful planning, is so essential a part of an architect's work, it is all the more necessary and difficult to uphold a vision of beauty in building, without which the architect will remain a mere constructor and mechanician.

Preservation of Amenities of London. Whilst we must all learn to bow to the inevitable, it is none the less true that until the inevitable is made clear, we should keep up a stout fight for the ideals we have aimed at. It seemed that the doom of Waterloo Bridge was nearing a certainty, when the clouds lifted and a Royal Commission stepped in to save it. The result should help to hearten us in our other efforts to preserve the amenities and charm of London.

Illustrations. We show a few sketches amongst our notes this week which may help to illustrate our remarks. One of the most beautiful of our old English church spires, a characteristic little church porch, and the dainty little bridge which spanned the water at the Wembley Exhibition, typify the aim of the architect. The world holds many beautiful things, but there are rising up amongst us to-day many buildings which come as near the personification of stupidity and ugliness as one could imagine. No authority in the land can keep this ugliness out. Nothing can raise the level of beauty amongst us but an ever-increasing sense of ideal beauty in those who have to direct building and manufacture and also in those who have to pay for it.

Artistic Expression in Craftsmanship. Not unallied to the subject of ideality is the question of a generous effort to encourage artistic expression in craftsmanship. We think our architects would do well to contribute their quota in helping the efforts of the Rural Industries Bureau towards the development of artistic craftsmanship, and we may draw attention to the letter on the subject which we publish on p. 82. We know from our own experience how difficult it is to find a natural talent for the artistic expression of craftsmanship. We remember hoping for some good wrought metal furniture for the doors of a country house from the local blacksmith, and the result was an attempt to vie with the painful

A Reminiscence of Wembley.

Steeple of Lechlade Church.

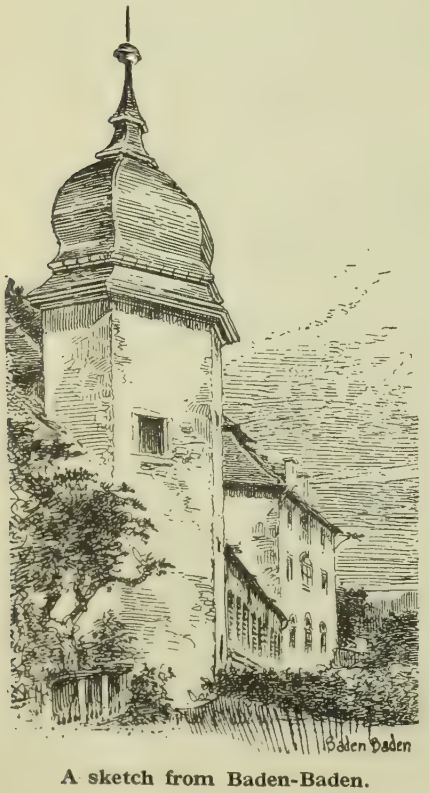
neatness and finish of machine-made stuff. The Rural Industries Bureau think they can bring about improvement; if so, architects ought to help them.

Rome and Jarvis Student Designs. No student or lover of fine architecture should fail to see the very fine collection of drawings in the east gallery of the Imperial Gallery of Art at the Imperial Institute, which are being exhibited by the British School at Rome. The selection of works by Rome scholars and Jarvis students covers the work of 1913 down to 1924. The School of Rome may take some reasonable pride in having been the means of bringing forward such talented work. Nearly all of it is in the front rank of draughtsmanship, from the brilliant work of H. C. Bradshaw to the refined and beautiful drawings by Stephen Walsh. The conjectural restoration of these fine works of ancient times shows in a very striking way what was once the power and glory of Rome. But, apart from the realisation of the luxury and magnificence of these great works, we may hope that some of our students at least will be inspired by the beauty of proportion and detail which we so sadly lack in most of our modern work. The Cortile of the Palazzo della Cancellaria at Rome, and the Stoa of Hadrian at Athens tell us something of the realities of fine building.

The Architect's Services. It seems to us that too much stress is laid on the fact that much actual making of working drawings for a building is now, in these days of steel construction, not done by the architect at all. But this is due to a misunderstanding of what constitutes the real value of the architect's services. In some cases, the highest essential value of an architect's service lies in his business capacity in getting over all sorts of financial and technical difficulties; but the making of beautiful buildings, in addition to all the economic and practical values, must always remain the one important value of the architect to his client. Some very plain truths have been stated in an article by Mr. Arthur C. Holden, in the A.I.A. *Journal*, and one of the most pertinent things is that whilst it is theoretically true that an architect should be selected on account of his professional qualifications, not one man in a thousand has the information on which to base such a judgment.

A Fine Artist. THE death of Mr. F. Cayley Robinson leaves a gap in that more romantic and contemplative expression of art which we associate with its finer issues. There was a poetry and imagination in his work which revealed a gentle nature, touched with its own experiences, lending a charm to work as sensitive as it was accomplished. A worker in many vehicles, his versatility was considerable. His excursions into mural art, though finely conceived, were obstructed by the habit, so unfortunately inherited, of indirect approach: that is to say, the work was of the studio kind, to be fixed afterwards on the wall itself, instead of the more robust and disciplined mural painting which is executed on the wall directly. This can never be more than a pale alternative to the real thing, which requires that we should work on the wall itself where alone all the conditions governing its requirements can be properly realised.

Three Notable Engineers. BY the death, last week, within a few days of each other, of Sir Francis Fox, Mr. Ernest Fiander Etchells, and Mr. H. Percy Boulnois, three diversely notable figures disappear from the arena of structural engineering. Their careers and achievements had but little in common. Sir Francis, dying on January 7, in his eighty-third year, had attained to world-wide fame, and had finished his course. Mr. Etchells, who died on January 5, was but fifty years old, and might be supposed to have energy and talent awaiting fuller development, for his work was but little known beyond the technical circles in which he moved. But his keenly scientific and acutely critical mind had won the respect of his professional brethren, and he will be especially missed at the Institution of Structural Engineers (formerly the Con-



Porch of Alderley Old Church.

crete Institute), where he was an energetic force. Perhaps his most important service to the Concrete Institute was his active share in the standardisation of the technical formulæ relating to concrete engineering.

Sir Francis Fox.

SIR FRANCIS FOX was a constructional engineer of more expansive mould. Indeed, his name is associated with some of the most notable civil engineering works of modern times. To mention but a few, the Mersey tunnel, the Liverpool overhead railway, the Simplon tunnel, the rock railway to the top of Snowdon, the Cape-to-Cairo railway, two London tube railways, the swing bridge over the Dee at Chester—these are works Titanic enough to establish any man's claim to eminence as an engineer. It was Sir Francis Fox's experience with the Greathead grouting machine on the Tube railways that vastly increased his practical interest in architecture. He saw in the Greathead machine—which, by means of compressed air, forces liquid cement into crevices, cavities, and joints—an effectual means for the preservation of ancient buildings. After experimenting with the machine on the decayed walls of churchyards, Sir Francis was able to recommend its adoption for the arrest of the crumbling fabrics of cathedrals. By this means he prolonged indefinitely the lease of life of the cathedrals of Winchester, Canterbury, and Lincoln, and the machine is now being used at St. Paul's. Always fertile in happy ideas and expedients, Sir Francis came to the rescue of the war-time need for hospital linen and calico by stripping off the mounts of engineering drawings, and collected enough to supply 121 miles of textile fabric to the hospitals.

A sketch from Baden-Baden.

Mr. H. Percy Boulnois.

THE third death that we have to record is that of Mr. H. Percy Boulnois, M.Inst.C.E., at the age of eighty-one. He was past-President of the Institution of Municipal and County Engineers, and was city engineer to Liverpool from 1890 to 1897. Among other appointments he held were those of city surveyor of Exeter (1874 to 1883), and borough engineer of Portsmouth (1883 to 1890). On relinquishing the Liverpool appointment, Mr. Boulnois became an inspector under the old Local Government Board, and at the time of his retirement from service under that body, in 1911, he occupied the position of deputy chief engineering inspector. A well-known authority on road construction, he was appointed a member of the advisory committee of the Road Board in 1910.

Art Schools.

THE Presidential address at the annual meeting of the National Society of Art Masters included reference to the growing recognition of the importance of the relationship between Art schools and the design and style of commercial products. It is indeed hardly possible to overstate the importance of securing a greater degree of co-operation between manufacturer and school. Many will agree in deploring the use of the word "art" in conjunction with technical education, because the word has become divorced from its real meaning as signifying a quality inherent in a good article, and has of recent years been associated almost exclusively with ornamental flourishes. To obviate this it was suggested that the words "technical art" should be substituted, and this change would at least signify to the public something distinct and apart from the usual "art" product. The commission that is sitting on technical education in Dublin will not, we understand, be in a position to report for some time, but its findings should be of interest on this side.

Mosaics.

THE paper read at the R.I.B.A. by Mr. Boris Anrep on Mosaics, and of which a report was included in our last issue, was of more than ordinary interest in that it presented the right approach of craftsmanship in regard to design and treatment. It was evidence of the advance towards sounder methods and a better artistry. Mosaic has been for too long a dull and lifeless affair in which the material was used with little sense of its possibilities, so that all interest had gone out of it, so little was the artist concerned. And even now there is mosaic work being done which is no more than the imitation of the cartoon. A notable instance of this mechanical approach of a beautiful material is to be seen in the mosaic work in the spandrils under the dome in St. Paul's Cathedral, which exhibit little enough of the qualities of a beautiful material. The method there employed was, we believe, that of sticking down on paper or other material, the tesseræ to be afterwards fixed to the wall. The work of Mr. Anrep is a welcome change from these methods and is full of first-hand vitality of treatment. It is also one of those welcome assurances that the outlook on craftsmanship is being lifted into a higher plane, in closer relation to art than to commerce.

The Royal Canadian Academy.

MR. HENRY SPROATT, LL.D., F.R.I.B.A., of Toronto, has just been elected President of the Royal Canadian Academy. He is the first architect who has occupied this position. The following architects have also been elected Academicians: Hugh G. Jones, F.R.I.B.A., Montreal; Ernest Cormier, R.I.B.A. (Henry Jarvis Student, 1914), Montreal; J. O. Marchand, Montreal; J. Melville Miller, Montreal; Hugh Vallance, Montreal; John M. Lyle, Toronto.

The London Architectural Medal.

THE annual award of a medal for the most meritorious architectural work erected during the preceding three years is a mark of distinction which even our foremost architects are no doubt glad to receive, and the medal which the Royal Institute of British Architects now awards has already been won by several well-known men for equally well-known work. That the awards have so far been approved by the profession we have no doubt, and while we have architects capable of designing such buildings as have already won distinction, there will be no lack of interest in the award itself, though there may be apathy in suggesting suitable buildings for the medal. The jury making the award are dependent upon the profession for such suggestions, for while, sooner or later, they may get to know about works suitable for the medal, they may very well overlook some which have not been suggested to them and which they are not familiar with. A correspondent writes suggesting that our readers be given an opportunity of naming suitable buildings for the medal, as "it would be a great help to the jury and might have the result of unearthing some very fine bit of work that has not as yet secured public attention." We shall be willing to assist in the way suggested and to publish any reasonable proposal. It is, we think, doubtful whether there is the amount of interest we might have looked for by the profession in the award of this medal. Those who feel any genuine interest in the subject should at least take the trouble to record their votes, and thus show their appreciation of what they consider is of value in recent architecture.

Long Crendon Manor, near Thame, Bucks: West Elevation.

Mr. Philip Tilden, Architect.

THE TREND OF 1926

By HOWARD ROBERTSON.

One of the soundest and most interesting methods of forming an opinion of present architectural standards is the formation from time to time of retrospective exhibitions such as that which is still being held at the A.A., in which are hung examples of the work of Past-Presidents dating as far back as sixty years. A show of this type is particularly valuable, because it enables one to bridge the gap between the past and the present in progressive stages. The drawings are a much better record of influences and movements than could be any written account. They show the individuality of the architects as designers and as draughtsmen, and they also disclose the fact that the perspective artist has never ceased to be reckoned as an effective aid in the effort to secure the elusive job.

Perhaps the net result of an examination of the work would be the conclusion that "plus ça change, plus c'est la même chose." Every decade seems to produce its architectural leaders, its originators, and—as a foil—its gallant company of die-hards. The same determination to tackle the problems of the day, the same controversies over æsthetics and expression, the same peculiar little vogues and fashions were evident twenty years ago as they are to-day, and it is in fact surprising to see how in some cases a thirty-year-old scheme is prophetic of what we to-day consider quite advanced architectural rationalism; but it would not be fair to conclude that differences between the past and present conditions do *not* exist, and that the present architectural standard does not reveal some quite encouraging evidences of progress over that of the preceding generation.

Noticeable during the last two or three years, and particularly evident in the work executed in 1926, has been the improved technique in design, particularly in respect of general composition and the maintenance of scale. There is greater certainty in such essentials as fenestration, the sub-division of façades both horizontally and vertically, and as a result the element of amateurishness in London street architecture is tending to disappear. Perhaps because of this effort to attain to breadth and simplicity of scale, the detail of much of the newer commercial work has suffered from lack of interest and poverty of imagination. A rather crude series of motifs seem to be in fashion at the present moment—what an American draughtsman might call "snappy tee-square stuff." There has been a good deal of this type of detail in Kingsway, whence it has crept into sections of Regent-street, Oxford-street, and elsewhere; it characterises chiefly the work of architects who are more vigorous and practical than scholarly.

Regent-street itself has never ceased to be a topic of discussion, if not of dissension, but it has probably more protagonists to-day than was the case a year ago, and certainly it has been greatly improved by the completion of the Quadrant, which constitutes the most uniform and satisfactory part of the design. One of the difficulties with the architecture of Regent-street, and of buildings of the type of Devonshire House, is the curiously "cardboardy" appearance of the façades, due, no doubt, to walls of stone which have only slight reveals. The massing of these fronts assumes something of the strength and power of the massing of the Italian Renaissance, and while they are bland enough in their fresh whiteness, they will be capable of a certain frowning sternness when begrimed; but with it all, one detects the essential thinness of the frame construction and veneer, and the effect of this constitutes an anticlimax. Much stronger than any argument of pure æsthetics or "expressions" in favour of the desirability of modernising our outlook on design is this obvious incompatibility between modern frame construction and forms which were originally conceived as being built from the solid. One gets over the shock of seeing the heavy steelwork that lies back of these massive stone arches in Regent-street which form connecting links in the Quadrant schemes. Steel is sometimes inevitable, and the London Building Act is always with us; but all the same, it is very nearly time that such motives of pseudo-massive architecture were discarded, for not only are they an expensive anachronism, but they have very little intrinsic interest.

Another small point which detracts in these new buildings is the use of the steel window, not quâ steel, but because it is designed in such very near resemblance to a wooden window. Painted white, with sub-divisions resembling those of the traditional wooden sash, these steel windows fail, however, to complete the illusion because they have neither the depth nor the modelling of wood, and appear strangely thin and paper-like. Could they be treated in the more modern conception of large sheets of glass secured by a light steel frame, they might attain an interest and quality of their own; as it is, both the general design and the structural detailing of many of our new buildings are rather in the stage of the automobile in its early days, when it was called, and resembled, a "horseless carriage."

While design has failed, on the whole, to take advantage of opportunities offered, there is no question but that technique in the fitting and equipment of our buildings is improving enormously. The cinema is an instance; some of the latest London halls are the equal of any in the world, both in design, furnishing, and methods of heating, ventilating and illuminating. The same may be said of some of the most recent big shops, in which it is noticeable that a great deal of attention is paid to details such as the window and counter fittings, the treatment of the lifts, etc. Peter Robinson's, and the Austin Reed premises in Regent-street, are just two instances, and it is certain that in the future still greater efforts will be expended in this direction. The value of good design is evidently being increasingly appreciated in the commercial world, as witness the alterations to Stagg & Mantle's premises in Leicester-square, where the architects have turned a drab front into one of the most cheerful and attractive façades in the whole of the West End. Another small piece of evidence is the attention paid to such details as shelters or marquises, which, of course, have an advertising value apart from their utility. A number of very well-designed shelters have recently been put up—at the Embassy Club, Verreys, Debenhams, the Holborn Restaurant, Simpson's, to mention but a few—and the design of these is equal to the best Continental standard.

No doubt the Paris Exhibition is having a subtle effect on craftsmanship and design in this country. Designs like that of the amusing "Paris Trades" shop in Berkeley-street come, of course, straight from Paris; but there are elsewhere indications in shop fronts, the treatment of metal and glass, etc., that modern French design is having its influence. Incidentally, some outside stimulus has been badly wanted, for while English craftsmen have never ceased to do good work, their design sense has been in abeyance; this is true of metal work, door furniture, electric-light fittings, one might say of all items of stock equipment. Design in lighting fixtures is beginning to improve—but very slowly—and the catalogues still show the same models that were illustrated a quarter of a century ago. Nevertheless, some of the cheaper fixtures of a rather "engineering" type are both practical and clean in modelling, and it only remains for some of our leading firms to infuse into their more elaborate designs a little of the spirit which animates their Continental rivals for them to regain the position in this field which they are so rapidly losing. There are plenty of young architects who are capable of turning out for these firms really good and fresh designs for such details as chandeliers and brackets, designs which would be in harmony with the more modern trend in design.

A sign of the times is the excellent design and workmanship which is being put into our public services. 'Buses and tube trains are not buildings, but they are very nearly architecture, and are susceptible of being well planned and suitably decorated; and the same thing is true of the stations and depôts which house them. The new Underground stations are designed in a fresh and vigorous modern spirit, and they herald a new era in the designing of public utility buildings. Good composition and planning, directness and simplicity of expression, excellence of lighting and decorative effect make of such stations as Morden a vehicle not only for public amenity but also for discreet and effective advertising of railroad efficiency.

The new telephone boxes are by now a familiar sight, and Sir Giles Scott's design, lit by night with a warm and hospitable internal glow, must have induced many a sluggard John Citizen to "say it by telephone." In similar genial fashion are we "couéd" into Post Offices by signs which at street corners indicate their convenient proximity.

To turn for a moment from town to country, the preservation of the beauty of rural England would not be a difficult matter if all developments and individual houses could be designed by the capable young men who are maintaining in small house design a very high standard (and who are proving, *en passant*, that school-trained men can tackle cottages as well as palaces). A town like Welwyn Garden City is a marvellous place, and the architects have shown how very attractive small houses and community buildings can be.

Not quite so encouraging as some of the executed work is the standard of successful competitive design. Quite frankly (this is *not* written as an "unsuccessful competitor") the elevational design and detail which hallmarks the winning design is nearly always of very poor quality. Planning is excellent, but somehow the fear of *not* winning seems to paralyse competitors' creative abilities. Competition conditions are vastly improving, what with juries and a reorganisation of the Institute's committees; but it is still a little doubtful whether "safety first" is not responsible for placing buildings won in competition in a state of elevational inferiority.

The architectural results in any year are by no means due entirely to individual effort. There is also the collective effort of the Institute, which works very hard and achieves results which may not be immediately felt but which make for progress and improvement later on. The Board of Architectural Education is one of the most useful sections of the R.I.B.A. in this respect. It does a very big work, scarcely realised by the majority of members, amongst the architectural schools of the country, particularly those struggling institutions which have to do their own battling against local inertia, prejudice, jealousy, lack of funds and equipment, and all the difficulties which beset education in its initial stages. The usefulness of the Board depends almost entirely on its personnel, and in this respect it has been lucky during the past year; it has been establishing its own traditions, too, in regard to policy and persons, and there seems every prospect of confidence in the good work going on even more smoothly with increasing experience.

The past year of architectural activity cannot be dismissed without mention of the written word. Never since the war has the battle of theory been more vigorously waged in the building papers, and never have publishers been better fed with books on architecture, some with pictures and some without.

Reviewing it as a whole, the past year seems to have been distinguished by an improved general architectural standard rather than by works of outstanding brilliance. There is certainly every reason for optimism as regards the future.

ANCIENT HINDU ARCHITECTURE IN JAVA

I.—THE BOROBUDUR TEMPLE AT DJOKJAKARTA.

BY W. ROBERT FORAN, F.R.G.S., F.R.A.I., ETC.

THERE are many relics of the admirable art of the Hindu architects scattered about Central Java and East Java, but those in the vicinity of Djokjakarta are the most famous and best preserved. All of them, however, have suffered severely from the elements, time, earthquakes and vandalism; but the Borobudur, Prambanan, and a few others have been restored as far as is humanly possible, or else are in the process of being restored, by the Archæological Service of the Dutch East Indies. It is unfair to compare them to other equally well-known and better-preserved monuments of ancient Eastern art, such as the Taj Mahal at Agra, the Shwe Dagon Pagoda in Rangoon, and the Angkor Vat in Cambodia. None of the Java relics is so truly beautiful or imposing as these three temples, although it is often claimed that the Borobudur is the most beautiful building in the Far East. That claim, in my opinion and that of many travellers in the Orient, is an exaggerated one. In its colossal size and its architectural design are to be found the chief points of interest.

The Borobudur Temple is situated in wonderfully beautiful surroundings. You approach it by a well-shaded road with Mounts Merapi and Verbabu forming an effective background and overshadowing the massive bulk of the ruins. The enormous pile of greyish-tinted volcanic stone stands in a plain of slender coconut palms and green acres of rice-fields, and faces the mist-shrouded craters of these twin volcanoes; and behind the gigantic mass of stonework is a distant border of green and tender blue hills. The greyish tint of the material used in its construction serves to enhance the sombre, imposing effect of this enormous building. It is the size of Borobudur that creates the most lasting impression. Its base is 531 ft. in length; and it is claimed that the carvings and ornamentations, if placed in line and touching each other, would measure something like two miles in length. I can well believe it.

Upwards of eleven centuries have passed since this gigantic building was erected, and frequent earthquakes, volcanic eruptions, tropical rains and suns, and the vandalism of mankind have each assisted the process of decay; but the Borobudur remains to-day an impressive fact—a wonderful product of master minds among the Hindu architects of the ninth century. Nothing is really modern about it, except the small Government hotel that squats at its foot beneath the shade of big, leafy trees.

The Temple at Pawon, with entrance to the single interior chamber.

Nothing definite is known in regard to the history of the Borobudur Temple. No inscriptions or other records have been discovered which make mention of this stupendous Buddhistic monument. The only indication as to the probable date of its erection is to be discovered in the short inscriptions above the bas-reliefs on the covered base of the Temple. The characters used for these writings confirm the supposition that they were inscribed about A.D. 850, and it would seem obvious, therefore, that the building of the Temple must already have been commenced about that time. Most probably the Borobudur was erected over part of the ashes of the Lord Buddha, under the inspiration of Hindu architects. However, about A.D. 925, something must have occurred which caused the downfall of the Hindu Empires in Central Java, while those in East Java still continued to flourish. What events brought about the overthrow of these empires are unknown. The Borobudur Temple suffered, however, through the collapse of the Hindu influence. Then came the successful Mohammedan invasion, and all interest in the completion of the vast monument was lost. It was never actually completed, a fact which has been established beyond all question.

During the brief period of British influence in Java, Sir Stamford Raffles ordered a survey of these ancient ruins. It took a long time, however, before the monument was cleared properly, and then further traces of decay became patent; but no definite steps were taken to arrest this decay. Only during quite recent years has the Dutch Government voted funds for the restoration of the Borobudur, and this has been carried out with most creditable success.

The building is in the form of a gigantic stupa, built not upon a hill but around it. The hill forms the core of the stupa, being enclosed by a series of four sculptured galleries on top of which rise three terraces, of which the uppermost one has in its centre a bell-shaped stupa. This style of architecture originated from India and, in its most simple form, is a half-globe erected or not, as the case may be, on a pedestal and protected by masonry in the form of an umbrella. In the course of time this most simple design underwent a good many changes. In some cases the half-globe was either lengthened or flattened; in other instances the pedestal changed into a series of terraces, which sometimes occupied more space than the half-globe. But

The Borobudur Temple, viewed from the east face, as seen from the village.

View from the Upper Terrace.

View of Upper Terrace below crowning Stupa with rows of dagobs

always the half-globe remained the essential part of the whole building.

When first viewing the Borobudur, it is quickly noted that the Temple stands on a broad platform, from which rise four successive polygonal galleries, while on top of these galleries are three circular terraces adorned with lattice-work dagobs of masonry. Each of these dagobs contains an image of the Buddha. From the centre of the uppermost terrace rises the bell-shaped stupa, its actual summit broken off probably as the result of an earthquake. One would suppose quite naturally that this last-named stupa formed the principal part of the whole building, the remainder being nothing more than an elaborate pedestal. If the whole building, however, is viewed from a distance, for instance from the front of the small hotel and when silhouetted against the evening sky, it will be observed that the contours of the mass form a distinct circular line. The whole of the complexes of galleries and terraces form a flattened half-globe, of which the stupa at the summit is only the crowning portion. The platform, which is reached after climbing the first flight of steps, must be omitted, as it does not form part of the original design of the architects of the building. When the base was excavated, it was discovered that a series of reliefs had been wrought on it, but that these had never been completed. The natural inference, therefore, is that, when building this monument, the architects recognised that the base originally planned would not be strong enough to support the whole structure and, in order to strengthen this base, a large band of masonry was built round it like a gigantic stone ring. This is now actually the first platform of the Temple.

The four galleries above this lower platform at the base are all polygonal but yet built in such a manner that, when one is contemplating the mass of the building from afar, they do not infringe upon the circular line of the contours. They are enclosed by balustrades; and the inner walls of these, as well as the inner walls of the galleries, are all adorned with bas-reliefs. At regular intervals, niches have been built on top of these galleries, each niche containing, or having once contained, an image of the Buddha. In the middle of each of the four faces of the building, these niches have been intersected by flights of steps, and on either side of them are placed images of sitting lions;

The Southern Gateway with Arched Doorways.

and, where the stairway crosses the galleries, arched doorways are still in existence.

The first thing which commands the attention, when ascending the monument to the stupa on the summit, is the abundance of the ornamentation of the galleries. From the first of these upwards, the sustaining walls are covered with exceptionally well-executed bas-reliefs illustrative of the various episodes in the life of Buddha. Gargoyles decorate all the angles; and delicate flower and festoon motifs, arabesque and volute work, birds and animals serve to break the monotony of the gutters and run along the cornices.

The images in the niches are all Dhyani-Buddhas, these being the rulers of the four quarters of the earth and the zenith. Those at the Borobudur Temple can be identified by their attitudes and by the situation they occupy. In the first four rows of niches there are ninety-two images on either side of the building. Those on the east are images of Akshobya; on the south, of Rathnasambhava; on the west, of Amithaba; and on the north, of Amogasiddha. The fifth row, on all sides of the Temple, has images of the same Dhyani-Buddha, and there are sixty-four in number; each one represents Vairocana, the ruler of the zenith.

On the terraces there are no Dhyani-Buddhas, but all the images there portray every Buddha known in history. These are all enclosed in lattice-work dagobs, and the figures represent the Buddha in the attitude adopted when preaching. In the crowning stupa of the monument was found still another image of the Buddha, but it had never been completed. This is, most probably, an exact replica of the also unfinished Buddha's image which was erected on the spot where the Gaudama Buddha assumed Buddhahood. At present, this incomplete Borobudur image stands on a dais near the base of the great monument, close to the site of the little hotel.

It is not possible to explain all the bas-reliefs, even in the light of our present knowledge of past history. When following the texts of the Yatakamala and Lalitavistara, which are both Sanskrit books recording the stories of the different incarnations of Buddha, it is possible to give an explanation of what was meant by some of the reliefs on the lower galleries; but many of them are still not understood. Generally speaking, the reliefs first give a sketch of the misery of life's eternal turning, followed by pictures pointing the way to redemption; while on the galleries this is

An Episode in the life of Buddha.

The Shipwreck of Buddha.

Bas-reliefs on the Eastern Gallery of the Borobudur Temple.

T

The Temple at Mendut, showing form of the design and the mural decorations and bas-reliefs.

The Eastern face and Gateways of the Borobudur Temple.

continued with narratives of the former lives of the Buddha and concludes with tales relating to the future.

A principal entrance cannot be noticed, for all of the four faces of the colossal building are constructed in exactly the same manner; and neither in dimensions nor in ornamentation of the entrances and gateways can be observed any material distinctive features which would single out one of them as having been considered of more importance than any of the others. Only from the fact that all of the narratives represented by the bas-reliefs commence at the eastern gateway—the one at the side of the village and farthest from the hotel—can the inference be drawn that this formed the main entrance to the Temple. When starting forth on a tour of the massive grey pile of stone, it is necessary to turn to the left in order to follow intelligently the story unfolded by the bas-reliefs.

The architects and builders of the Borobudur Temple undertook an immense task, especially when one remembers that in the eighth and ninth centuries modern equipment was lacking. That they displayed a highly developed sense of art is proved by the fact that they saw fit to enliven the imposing effect of this gigantic structure by the virtuosity of the chisel.

Within a short distance of the Borobudur Temple are two lesser Hindu architectural specimens, of which that at Mendut is the most imposing. Both are very much smaller than Borobudur, and far less distinctive and interesting. *Tandji* Mendut—*Tandji* simply means "temple"—is pyramidal in form and stands about 60 ft. high, with the exterior walls elaborately sculptured. It possesses one interior chamber, some 15 ft. square, which contains three statues of more than life size. The largest and central one is believed to be an image of the Buddha in the act of preaching, while the other two are most probably figures of disciples. The larger figure is a particularly fine piece of workmanship and quite as impressive as any of its particular period to be found anywhere. It is excellently preserved, and is seated on a masonry throne. *Tandji* Mendut was most probably built in a later period than that of Borobudur. It was discovered in 1835, and restored as much as possible in 1897.

Almost across the road from *Tandji* Mendut is the even smaller *Tandji* Pawon. This relic is considered of very little account in Java; and, beyond its picturesque situation and the excellent state of its preservation, there is little of interest. It is handsome, particularly in the graceful arrangement of the stupas on its roof, and the exterior walls are covered by rather weatherbeaten bas-reliefs. There is one interior chamber and but one entrance to it. Practically nothing is known of its history or of its age, but its better state of preservation than that of the ruins of Borobudur and Mendut inclines one to the belief that it was probably built at a later period in the history of Java.

The Borobudur and its satellites, Mendut and Pawon, stand to the west of the town of Djokjakarta; but some twelve miles to the east of the town are many more interesting temple ruins, although none so impressive as the massive pile of Borobudur. Of all the ruins around Djokjakarta, the Borobudur must always hold pride of place and fill the minds of the present generation with wonder at the daring minds of the ancient architects who designed and built it.

(To be continued.)

AMERICAN APARTMENT HOUSES.—I

By F. E. BENNETT, A.R.I.B.A.

[WE give this week the first part of the Report of Mr. F. E. Bennett, A.R.I.B.A., prepared in accordance with the terms of the R.I.B.A. (Alfred Bossom) Scholarship, 1924, for the Study of Commercial Architecture in U.S.A. The subject chosen by him, and approved by the R.I.B.A., was "Apartment Houses: Good Class Flats in U.S.A."

The Report is divided into the following sections, *i.e.*, 1, Preliminary; 2, Sites and Courts; 3, Planning; 4, Other Floors; 5, Stairways; 6, Lifts; 7, Living Rooms; 8, Bedrooms; 9, Kitchen and Pantry; 10, Servants' Quarters; 11, Elevations; 12, Construction; 13, Finance; 14, Final Note; 15, References.]

In his preliminary remarks the author says:—"This Report is presented in the form of a series of notes and 72 plans, illustrations, drawings, &c. The object is to give a description of the high-class flats in America, for the information of other architects. It is not a complete study of the subject, but deals with the aspects of it which appear to be most important. The Report is arranged under 14 headings, which include one on Construction, one on Finance, and a Conclusion. The paragraph with the typical plans is the main one, and the descriptions in it are arranged so that information may be assimilated gradually. Other paragraphs are given as additional information to the one on Planning.

"The study of the subject turned out to be confined almost entirely to the two cities of New York and Chicago, and then mostly New York, for the best flats are found in these two cities. In New York there are several hundred blocks of high-class flats situated, more or less, in one part of the city. A few have recently been built in the lower end of the city. The information was collected during a period of eight months at odd times as opportunities arose; interviews were obtained with architects, financiers, 'Realtors,' building managers, and others; visits were made to existing buildings and various works under construction. Notes were made at the time or as soon after as possible so as to keep fresh records. Architects were most generous with their time and attention and gave me as much data as I wanted, and provided me with many introductions.

"The architects interviewed included nearly all the specialists in 'Apartment House' work. They were questioned and asked to criticise schemes which I had worked out. I was given every opportunity to use their offices and examine any of their drawings. I wish to record here my appreciation and thanks for the great help Mr. Bossom gave me and for the kind interest he took in my humble adventures in a strange land. Also I am very much indebted to Mr. Julian C. Levi, of New York."

In New York (continues the author) the major portion of the 7,000,000 population lives in "Tene-

The crowning Stupa with the top broken off, surrounded by a cluster of dagobs.

ment Houses." These "Tenement Houses" may be divided into two groups—those *without* and those *with* lifts. The latter class are commonly known as "Apartment Houses," and the telephone directory shows some 400 of them. Legally, a dwelling is called a "tenement house" when more than three families live in one house, under one roof, each family occupying a separate

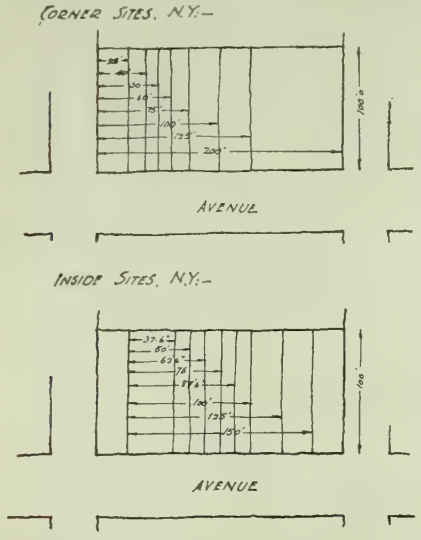

FIG. 1.

floor or part of a floor. The number of apartments in one building may be very many, and in one case is over 300, and the height of the building may be anything from 3 to 15 stories.

The laws of New York and most American cities do not recognise any difference between apartment houses and tenement houses, and both are placed under the same regulations, but the tenement house has generally come to be looked upon as the house of the poor, and the other of the rich. This Report deals with Apartment Houses only, and among those only with the highest class. The term "Apartment House" has been avoided as much as possible in preference to the English term "Flats" or "Flat Buildings."

It would be difficult to give a survey of all the good-class flats which have been built, owing to the variety, but a few typical examples have been chosen.

Buildings in U.S.A. allied to good flat buildings are: Club House Hotels—"Allertons," Apartment Hotels, Hotels, Tenement Houses.

The tallest flat buildings in New York are mainly grouped about the Central Park on Fifth-avenue, Park-avenue, Riverside-drive, and the park borders.

While these flats exist partly as the result of land value inflations, they have been made possible owing to the great developments in the efficiency of the lift.

Within a few years it is considered that the competition of the real estate market in New York will be the competition of good buildings against poor buildings. The values of old buildings have been greatly enhanced by the increase in building costs since 1915, so saving many from mortgage foreclosure. Life of a flat building is considered thirty to fifty years.

In New York the building of flats is governed by the Tenement House Law, the Building Code, and the Building Zone Resolutions.

In Chicago it is governed by the Building Ordinance and the Zoning Ordinance, which are based on the laws for New York.

SITES AND COURTS.

Nearly all sites are of true rectangular shape in New York and Chicago, owing to the grid-iron town plans. The blocks of buildings in New York are more or less constant in size and of dimensions invariably a multiple of 25 ft. For this reason and for real estate dealings, a "plot unit" of 25 ft. by 100 ft. deep is recognised. For instance, the normal type of site on Park-avenue measuring 100 ft. by 100 ft. is referred to as a site containing four units.

On a "block," then, with 200 ft. frontage, the sites occur as shown in Fig. 1.

In this Report the "inside" sites are practically ignored, as they do not provide the highest class of planning, owing to the poorness of lighting. For corner sites the law permits a maximum of 90 per cent. of the area to be built upon and 75 per cent. for "inside" sites. A court of from 10–20 ft. is required across the whole of the back (or in the case of corner sites along one side) of the site. Resulting from these laws, types of block plans are (Fig. 3):—

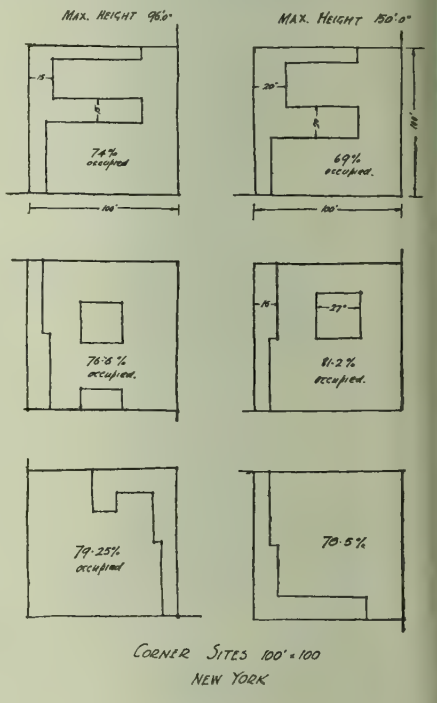

FIG. 3.

Many areas in New York are occupied by five-story buildings and others of a less height, so a tall block of flats situated among them has unobstructed views in all directions. "The angle of

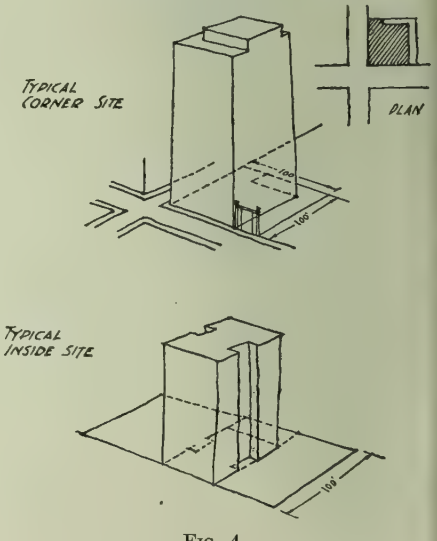

FIG. 4.

light" has a different application in American cities from English cities. New York, being some 700 miles nearer the equator, the sun reaches a higher level, and gives a steeper angle of light, making taller buildings possible in relation to the width of roads.

(To be continued.)

FIG. 2.—APARTMENT HOUSE, 620, PARK-AVENUE, NEW YORK.

REGENT STREET

By V. M. CHRISTY.

REGENT-STREET is, in several respects, a typical epitome of modern architectural tendencies. It is natural that it should be so, considering the completeness of the remodelling that has taken place there within so short a period of time. There are many fine buildings in Regent-street to-day; there are many fine parts of buildings there. Regent-street, as an architectural "sight" offers much to admire, much to enjoy, much to reflect upon. As a street with a definite unity, a character of its own, it died during the last few years. Because the distinctive individuality of the *old* Regent-street as a whole was so marked, the absence of such a quality in the new is particularly manifest. The new street does not lack distinction: far from it; it is, in fact, one of the most distinguished of our streets. But it is a union, not a unity; an aggregation of sumptuous and cleverly designed buildings, rather than an apparently natural society of mutually interested units actuated by a single aim. There *is* a common aim in Regent-street to-day, but that aim is the sum of the aims of the component parts. The spirit of advertisement, one of the prevailing spirits of the age, is here expressed in its most refined, æsthetic, and intellectual manner. It may be remarked in passing that perhaps never before has a street as a whole been known to advertise itself in the press as does Regent-street now.

One of the first impressions created by the street architecture of this almost totally new street is that the parts make up the whole, rather than that the whole is compounded of contributory lesser parts. The small makes up the greater, and announces the fact with trumpet blasts, without waiting to be first perceived as a result of close analysis of the whole effect. This tendency is a reflection of the age, when the *individual* has become so evident a component of the community. It is questionable whether this accentuation of the smaller parts produces such real satisfaction in beholding a fine street, as did the older hierarchy of parts. It would, perhaps, border on exaggeration to suggest that Regent-street to-day is an essay in the magnification of the unimportant; but such a phrase expresses something of the tendency which is evident in it. Dormers, ventilators, roof-ridges, window sills enter into a conspiracy to dethrone the greater masses from pride of place. Nevertheless, there is, with all this emphasis on the lesser parts, a complete absence of gimcrackery or trumperiness in this long stretch of buildings, so near to one another physically and so far apart in spirit. There is moreover a very marked display of opulence, combined with imaginative and structural skill, operating within the set of limitations and opportunities peculiar to Regent-street.

It is rather as a mirror of the age that Regent-street must be approached, than as a street with such individuality, almost personality, as one may find in other streets. Nash's street was also a mirror of his age, but it possessed character as a street as well. When one has accepted the fact that the new Regent-street is no longer capable of being judged as a complete whole in the same way that other streets can be judged and appreciated, one prepares to consider the buildings on their individual merits, rather than in relation to one another. As individual buildings many are interesting, pleasing or striking, while some challenge to a reconsideration of preconceived values. Perhaps the tendency to magnify the unimportant is among the revaluations that have least right to survival; but some of the new values suggested are undoubtedly true ones, arising as they do out of new purposes, new materials, new methods, and new outlook.

Among other indications of modern architectural thought here expressed is a remarkable catholicity. It is astonishing how wide a range of "styles" the street admits into its congregation. What could be more widely divergent in conception (to mention four of the most conspicuous among the newcomers) than the Quadrant series, Liberty's, Vigo House, and the Plaza Theatre? Were those the only members of the company they would offer a fair sample of the diversity in practice and manner which finds expression in buildings of to-day. Roughly speaking, there exist in Regent-street two fairly distinct groups or phases of architectural expression, though the two are at times inclined to merge imperceptibly. There is the uncompromising method, presenting almost unadorned masses and shapes, both to express structure and to create interest and character; and there is the other type, which at first sight seems to follow "tradition," in a narrow sense, more closely, and yet contravenes innumerable laws and customs of tradition, and at times may appear a little illogical. It is especially in this second type that there is noticeable a curious striving in the subsidiary parts of the façade to get above and beyond themselves. Each member of the cast seems anxious to play other parts as well as his own. Thus, a dormer endeavours to be a large and important window; a roof ridge seeks to appear as a notable portion of the elevation; a window-sill blossoms into a balcony, although the position of the window it serves has no warrant for such assertiveness. Just as the street is composed of many divers associated parts, without evident unity, so it is with many of the buildings. There is about some of them an indication that they are "nervy" rather than "nervous" in the sense of alert vitality. This disturbing state of things is very considerably mitigated by the fact that the individual parts and details are supremely good in design and workmanship. Moreover, the blocks which compose this array of divers buildings show an obvious regard in small particulars for the idiosyncrasies of their neighbours. There is symmetry, balance, a degree of concurrence between various portions of the street.

As a result of the interacting restraints, needs and opportunities, one of the striking features of Regent-street is its dormers. Not only are they remarkable for their number, but also for variety of treatment. Besides the more familiar changes rung on curved and gabled pediment effects, there are combinations of flat-topped, round-topped, single, double, treble grouping, besides the endless variations in size, position and spacing. The breaking up of the skyline from certain viewpoints is entirely due to dormers. From other aspects the grey mass of roof almost presents the illusion of a dark subsidiary sky. Indeed, roofs as well as other parts seem afflicted with the tendency to aspire to play a higher rôle than is theirs by nature.

The long curve of the Quadrant block is notable for many things, not least for the fact that it alone endeavours to enshrine something suggestive of the street that is now demolished, although it is so utterly different from it. It attempts to indicate the idea of unity, and in so doing at any rate achieves the linking-up of the three portions of the street one with another, and, above all, it retains the continuity of the old Quadrant sweep, although it does so under difficulties. The expedient of bridging the intervening side streets with those huge arches surmounted by columns, emphasises the continuity and makes a virtue of necessity. Descending Regent-street from Oxford-circus, part of the curving line of the Quadrant is first seen in the strange guise of a terminal point of a vista, and above it there slowly recedes the inquisitive spire-top of St. James's, Piccadilly. But because this magnificent range is really *not* a terminal block at all, the impression from the upper part of the street is wrong, the observer's ideas have to be swiftly readjusted to take in the fact that it is really a continuous curved line, which very gradually unwinds into view as it is approached. The handsome lines of Vigo House detract from the clear sweep of the curve, because they exert a backward pull upon it. And so it happens that on that side of the street the grand Quadrant sweep hardly gets a fair chance, for it is pulled back at the start by the verticality of Vigo House, and its course is later impeded by the Piccadilly Hotel. It should be noted here that the younger building carries on the sequence and continuity of the Piccadilly Hotel with a courteous gesture of *seniores priores* in matters of choice where no basic principle is involved. There is a degree of relentlessness about the cornice of this long curve on the two sides, but the stern lack of repose in it has a reason; for it is the quality of urgent movement that is so striking about this stretch of street. There is sufficient firm anchorage about the simple rusticated piers at the ground floor, and then by easy degrees the feeling of movement begins. There is the plain space for the shop name, then the clever balcony with enriched centre and gilded baskets of fruits, which subtly catch the eye, and direct it upward to the greater portions of the composition, as does also the ladder-like suggestion of the masonry of the piers. Apparently resting on the top of the piers is the first continuous lateral line. It is broken only where the great arches come, but broken in such a manner that it loses no momentum. In fact, the turbulence of the arch seems to toss it onward from one rock to another. Then, having thus traversed the intervening space, its impetus is increased. Thus launched, it continues its career into the "straight," or rather into the uninterrupted curve, till it shoots another rapid at the next arch. Above this line comes the main part of the façade with its interesting monotony of small-paned windows, cut as it were in the sheer wall face, and only slightly emphasised. The unmoulded strips at the windows supply yet another unobtrusive line to persuade the eye upward. And this time it is to the great cornice, whose sweep does not break or waver. Indeed, it continues a supplementary existence in Lower Regent-street after picking its way across the Circus.

Vigo House is especially interesting as being a modern expression of modern materials and methods. It has about it something of the almost metallic hardness and severity which is natural to any building expressive of steel and concrete. But, unlike some of its contemporaries, it is neither stark nor forbidding. There is, on the contrary, a humanity, a certain fine courtesy, about this restrained, closely-knit block. It is direct but by no means harsh.

Liberty's building has taken its place unquestionably as one of the most magnificent commercial monuments of London. With such a striking neighbour it is small wonder that some of the less conspicuous buildings dating from a little longer ago, appear somewhat smug and unimaginative, and others deck themselves rather forlornly with sulky cherubs or misplaced weapons of war. In the lower portion of the street it is small wonder that there is a desolate and tarnished appearance about the coronetted little two-story bays that survive from the older street, seeing the splendour of their changed surroundings.

Regent-street, by the very spaciousness of its new width, proclaims itself a thoroughfare, a busy street of traffic passing through. Yet more than ever before it is a goal in itself. Moreover, in Regent-street to-day men and women comment upon its architecture as upon no other street architecture in London.

Surveyor's Estate.

PARTHENON STUDIES*

By W. R. LETHABY.

I.—BRITISH SCHOLARSHIP BEFORE 1800.

"The pride of Athens and the boast of Architecture."—WILKINS.

To comprehend what is known and believed of the Parthenon at the present time, it is desirable to understand how the results of critical study have been reached. It has taken some two hundred and fifty years of observation and argument to gain our present appreciation of the building and the meaning of its sculptures.

Although not a hundredth part of what has been written may have been both new and true—all the rest being recapitulation—yet hardly anyone has really studied the wonderful stones without contributing something of value in explaining them. It would be informing to have an account of the building compiled by bringing together all that seems to have been freshly observed and said for the first time in the words of the several original records.

A short and inadequate outline of even the observations of British scholars in Athens is all I can now undertake. A comprehensive study, however, of British contributions to Greek archæology over the whole field would be a stimulating piece of work, and I venture to suggest such a survey to some student in search of a task. Our travellers made similar contributions to the study of the classical antiquities of Asia Minor and Sicily as they did for those of Greece. The best account of what we have done is given by the German archæologist Michaelis in his delightful book, *A Century of Discoveries*, in which he says: "The promised land of Greek Art was revealed here by British energy." My purpose in attempting this record of our past work is not to make any boastful claim, but rather by way of reproof to more recent slackness.

The foundations of our modern interest in Greek art were laid down more than three hundred years ago while Shakespeare was yet alive. Henry Peacham wrote: "I cannot but with much reverence mention the every way Right honourable *Thomas Howard*, Lord high Marshall of *England*, as great for his Noble Patronage of Arts and ancient learning, as for his birth and place, to whose liberal charges and magnificence this angle of the World oweth the first sight of Greek and Roman Statues, whose admired presence he began to honour in the Gardens and Galleries of Arundel House about twenty years ago, and hath ever since continued to transplant old Greece into *England*. . . . And some of the Old-Greek marble bases, columns and altars were brought from the ruins of *Apollo's* Temple at *Delos*, by that Noble and absolutely compleat Gentleman, Sir *Kenhelme Digby* Knight." (*The Compleat Gentleman*, 1634.)

The excellent work long ago done by our travellers and students has for the last fifty years been somewhat overlaid by more modern speculation, and neglected here in favour of the new-fangled and the foreign. We especially seem to lack cohesion and continuity in these things and prefer to quote foreign scholars rather than our own. This is a mistake, for besides the point of justice, our own powers seem to wither and we become doubting and timid.

If advances are to be made, risks must be taken, but usually we do not like taking risks and frequently prefer to cling to an outworn theory for which we are not responsible. The scholarship of art is largely a game and for it what is most required is general alertness and interest. When observations are made, even by the most unlikely outsiders, they should be welcomed and considered. The tide of interest must either flow or ebb.

. . . . . .

Francis Vernon.—Between 1670 and 1680 Athens was visited by several scholars, and from this time dates our modern knowledge of the Parthenon. In 1674, a competent foreign artist working for the Marquis de Nointel made a most valuable series of drawings of the sculptures, but for a long time these indispensable records preserved in Paris were not published. Randolph—an English traveller—was in Athens about the same time and in 1675 it was visited by Francis Vernon, who seems to have been the first to take accurate measurements of the Parthenon. Vernon was a remarkable man "possessed with an insatiable desire for seeing." He went from Venice to Greece, examined the ruins of the temple at Delphi, and visited Thebes, Corinth, and Sparta as well as Athens; he travelled on to Persia, where he was murdered. In January, 1675-6, Vernon wrote an account of Athens, which was printed in *The Philosophic Transactions* of April in the same year. Randolph's book did not appear until later and the measurements which he gives are evidently taken from those made by Vernon, who wrote thus: "At Athens I have spent two months. Next to Rome I judge it to be the most worthy to be seen for Antiquities of any I have yet been at. The Temple of *Minerva* is as entire as the *Rotunda* [or Pantheon]. I was three times in it and took all the dimensions with what exactness I could. . . . The length of the *Cella* or Body of the temple without side is 168 feet English; the breadth, 71. These measures you may rely on as exact to ½ a foot. The *Portico* of the *Dorique* order, which runs round it, hath 8 pillars in front, 17 on the sides; the length of the Portico is 230 feet English. I have taken all the dimensions within, with those of the *προνάος* and the Portico's, but they are too long for a letter. The *fuste* or shaft of the Pillars is 19½ feet in circumference. The *Intercolumnium* 1¼ of the diameter of the pillars. . . . About the Cornice on the outside of the Temple of *Minerva* is a *basso-relievo* of men on horseback, others in Chariots; and a whole procession of people going to a sacrifice, of very curious sculpture. On the Front is the history of the Birth of *Minerva*."† The dimensions must have been carefully taken. Penrose gives the length on the top step of the platform of the peristyle as 228.3 feet; the description of the frieze is excellent.

George Wheler.—The Temple and its sculptures were more fully described by the Frenchman Jacob Spon, and his English companion, George Wheler, who visited Athens in 1676. Spon speaks of Vernon as having been in Athens six months earlier, and also of the drawings made for the Marquis de Nointel, with whom he and Wheler compared notes in Constantinople.

Wheler's book is mainly an English translation of Spon's French text, but the earlier volume must to some extent have been shaped by the observations and conversation of both the travellers. I condense Wheler's account of the western pediment; his description of the "prauncing" horses of Athena's chariot is fuller and more vivid than Spon's. In a few years these horses and much else in the pediment were destroyed and the written word is a valuable commentary on the drawings of Nointel's artist. At this time it was understood that the sculptures represented the Birth of Athena, whereas the subject was the dispute between Athena and Poseidon for the guardianship of Attica.

"A figure stands in the middle, having its right arm broken; its legs straddle; its beard and the majesty expressed in his countenance show it to have been Jupiter [Poseidon]. At his

† This account is extracted with others in *De Parthenon*, by Michaelis.

FIG. 1.—PART OF SOUTH FRONT. R. DALTON, 1749.

* I have been drawn to the study of the Parthenon by the sculptures and architectural fragments in the British Museum, and my purpose here is to bring out little observations, and put together notes made during the last thirty years. The best entry to Parthenon studies is a visit to the Elgin Gallery with the admirable 6d. "Guide" sold at the Museum.

FIG. 2.—PART OF WEST PEDIMENT. R. DALTON.

right hand is another figure with its arms broken off, covered down half-way the leg, coming towards Jupiter [Poseidon]; perhaps a Victory [Athena] leading the chariot of Minerva. The horses are made with such great art that the sculptor seems to have outdone himself by giving them a more than seeming life; such a vigour is expressed in each posture of their prauncing and stamping, natural to generous horses." When, in an attempt to remove it, the chariot group just described on the left-hand side of the west pediment was destroyed by the Venetians about a dozen years later, the figures of Athena and Poseidon seem still to have remained for a time in the centre of the pediment.

Pococke.—The state of the west front in 1737–8 was described by Pococke. His account is confusing as the figures were mentioned in inverse order, but it becomes clear on comparing it with Dalton's careful view drawn in 1749. Pococke says: "I saw in the pediment one naked figure sitting [Furtwängler's Ion on the right]: two clothed [next towards the centre]; a woman in posture of walking [Iris]; all without heads; two bodies in the middle, one standing [Athena and Poseidon]; Hadrian [Cecrops] sitting with a woman; and a naked figure fallen down [or rather reclining in the left-hand angle]." Three of the figures described as without heads had not lost them when Nointel's drawings were made; one of the "two bodies in the middle" seems to have fallen over on the cornice.

Pococke also noted in the eastern pediment—"Head of a horse [of Helios]; a naked man sitting fallen down [Dionysos]; two men [*sic*] sitting, their heads being broke off [Demeter and Persephone]; one like a woman flying [or rather startled], the head likewise gone; the middle part [of this pediment] all destroyed; and on the other side there only remained three broken figures" [the "Fates," two of which still retained their heads in 1674; the first of the three figures seems to have fallen soon after Pococke saw them].

Lord Sandwich, on tour in 1738–9, visited Athens with a tutor, and it was noted of the Parthenon: "Several of the statues lie on the ground broken to pieces by the fall."

Richard Dalton.—Dalton, just mentioned, was an artist employed by Lord Charlemont (born 1728) to accompany him when he made the grand tour on becoming of age. Charlemont seems to have projected a work of research and record. In Hardy's *Memoirs of the Earl of Charlemont* it is said of Dalton: "as an artist he was miserable, but exact and faithful." Dalton made his drawings of the Partheon in 1749, and his plates were etched in 1751 and ready for publication in 1752; then there was some quarrel with his patron and later the artist issued the plates himself. They have sometimes been spoken of slightingly, but the prints show such accuracy of observation that the original drawings must have been remarkably delicate. Dalton at one time was Librarian at Windsor Castle, and I wonder if his drawings are preserved there. Lord Charlemont became a person of political importance; he was made a member of the Society of Dilettanti in 1756 and died in 1799. Possibly his notes of travel still exist in MS.

Dalton's plate of the "Theseum" is dedicated to Lord Charlemont: "This work, intended to illustrate the Antiquities of Greece and undertaken and finished under his Lordship's direction . . . published April 12th, 1751." In 1752 a prospectus was issued of the *Museum Græcum et Ægypticum.* This states that Mr. Dalton was engaged to make the drawings by "a very sensible and worthy young nobleman, the Lord Viscount Charlemont, who saw how imperfect all books of travel . . . had been by the want of accurate drawings. The first part consists of twenty-three plates and relates almost wholly to Athens. . . . This part is already published."

Lord Charlemont's party visited Halicarnassus. "Here they found several very valuable relievos which are probably part of a frieze in the Mausoleum. The subject is the battle of the Amazons." Dalton drew and etched these also. In a complete edition of his plates, *Antiquities and Views in Greece and Egypt*, 1791, we are told that when the Mausoleum prints were issued, "the editor at that time found himself much deceived and was obliged to abandon further publications, as the whole cost fell on himself." At Halicarnassus a large round altar was discovered; "the subject is an ancient marriage." ". . . On the Sigæan promontory they met with two pieces; one is the portrait of a young Greek holding a scroll, the other is a sarcophagus on which are women with newly-born

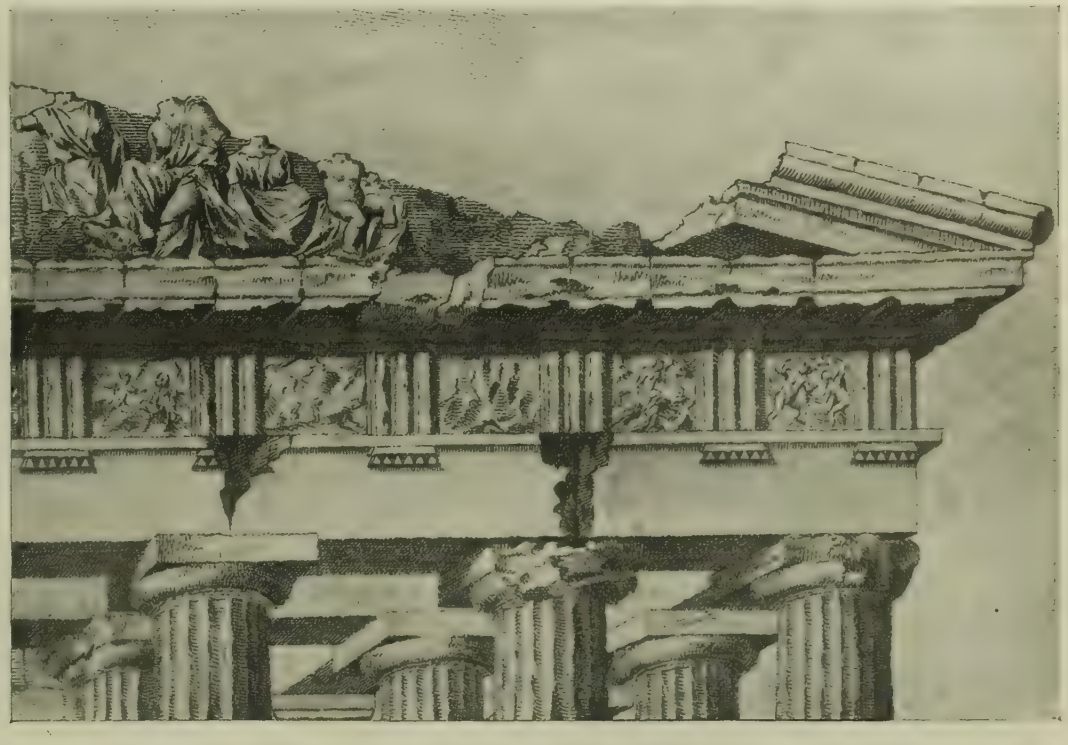

FIG. 3.—PART OF WEST PEDIMENT. R. DALTON.

children in their arms returning thanks to the goddess Lucina." This and the altar are now in the Museum.

In the History of the Society of Dilettanti it is observed that Dalton "made several drawings of Athenian antiquities, but they are of little value for art or archæology." This, I think, is a mistaken view. Dalton's work was a credit to English art, being some of the most exact of architectural records up to that time published. One of the purposes of this chapter is to render recognition to Richard Dalton, whose name is not recorded in the *Dictionary of National Biography*.

Dalton's plates included a plan and views of the Parthenon. On the plan is recorded for the first time the facts that the intercolumniations next the angles are less than the others, that the outer columns have twenty flutes, and that the inner rows of columns at the ends had eighteen. The forms of the details of the building might really be understood from these careful drawings. The facts that the epistyle was made up of three parallel stones, and that its heading joints went through the *regulae*, are recorded.

His view of the west front shows that the two figures next the right-hand angle of the pediment had fallen out; the draped female on whose lap the nude figure was seated was not turned at such an angle as Nointel's artist indicated, but generally Dalton confirms the accuracy of the latter. Dalton shows a complete woman's figure next the Cecrops' group. That this figure was not mentioned by Pococke is evidence that it was an imaginary restoration of a broken fragment Pars saw there in 1765. A large part of the body of Athena lay on the ground and a portion of the lower part of the nude body of Poseidon was also on the ground, while the upper part of the body seems to have remained on the cornice together with the torso of Hermes. The "gap" near the left-hand angle is recorded as by Nointel's artist. Obviously a figure must once have filled it (Figs. 2 and 3).

Another view of part of the south front gives the general scale and feeling with great truth. The metopes here are so accurately drawn that their condition at the time can be made out. Even the fact that parts were detached from the ground is evident—a woman lifted from the ground by a Centaur has her feet dangling helplessly from the skirt of her drapery. Several plates represent the western frieze at a larger scale, and in these some details now lost are recorded.

Robert Wood and James Dawkins, returning from their explorations in Egypt, Palestine, Syria, and, above all, Palmyra, in 1750-51, spent three weeks in Greece. Some of their notes and sketches have recently been presented to the Society of Hellenic Studies, but there are none, unfortunately, regarding Athens.

Stuart and Revett. — In this same year Athens was visited by two British artists on their own initiative—James Stuart and Nicholas Revett. Stuart was born in the City of London, the son of poor people; he became a painter and quite a learned person. Two sketches of his life given in Vol. 78 of the *Gentleman's Magazine* at the time of his death show that he must have been a man of remarkable powers and persistence. Revett was the son of a Suffolk landowner and he also began as a painter. In 1742 these two young men had gone to Rome, the former travelling there on foot. In 1748 they made a walking expedition to Naples in the company of Brettingham and Gavin Hamilton. It may have been during this tour that the project of a journey to Athens was mooted.

Stuart, in the Introduction to *The Antiquities of Athens*, says: "We were at Rome and there, towards the end of the year 1748, I first drew up a brief account of our motives for our undertaking this work." This Introduction is signed by Stuart only; he assumed and held the lead so fully that I can only here use his name for what must have been largely joint work.

At the Institute of Architects is a small vellum sketch-book used by Stuart in Italy. It contains several small landscapes, some drawings of architecture and notes for a treatise on painting, with very systematic observations on reflections, &c. There are references to Venice and Verona; of the former, he noted: "The plaster floors of Venice are composed of powdered brick, powdered marble and lime; when dry are polished." At one end of the book is the memorandum: "Names of the gentlemen who have promised to subscribe our Attica—Lord Malton, Lord Charlemont, Horace Mann," &c., &c. Among the other names is John Revett, of Brandiston, Esq., presumably the father of his companion.

It is clear that Stuart and Revett knew of Lord Charlemont's interest in antiquities, and it may have been a rumour of what he and Dalton were to do that turned Stuart's mind towards the Acropolis and the Parthenon. Being thus supported and doubtless financed, the friends left Rome for Venice in March, 1750. There they met Sir James Gray, who nominated them for membership of the Society of Dilettanti—a very exclusive body—to which they were elected in 1751. They arrived in Athens on March 18 of this same year and remained there until the end of 1753.

In 1762 the authors were able to publish the first volume of *The Antiquities of Athens*. "The success of the volume was instantaneous Stuart found himself famous and was afterwards known as Athenian Stuart. 'Grecian gusto' became the fashionable craze of the moment. It is from the publication of this volume that the modern study of Greek archæology may be said to date."

The Parthenon was not dealt with by Stuart and Revett until their second volume appeared about 1788-90 (it is dated 1787). It was only issued after Stuart's death, with a preface by his widow, who tells that "Mr. Stuart, having been infirm for some years preceding his death, left his papers in great confusion."

Chandler and Pars. — In the meantime, the Society of Dilettanti sent out another Greek expedition to Asia Minor in the charge of Richard Chandler, the scholar, with whom was Revett and William Pars, an able young painter. They left England, June 9, 1764, and were in Asia Minor until August 20, 1765, when they returned to Athens, where they remained until June 11, 1766, and completed some of the work Stuart and Revett had left unfinished. Towards the end of the year they laid their results before the Society; these included "a great variety of views and drawings of *basso-relievos* of the Temple of Minerva at Athens [the Parthenon] by Mr. Pars, which appear'd to the Committee to be done with Taste and Accurateness." Chandler brought some fragments of sculpture and "a very Curious Inscription relating to the architecture of the Temple of Minerva." (Really of the Erechtheum.)

Chandler's account of the Mission was published in 1776, so his observations on the Parthenon should be taken before Stuart's.

Of the principal sculptures of the Parthenon, Chandler only mentions "Hadrian and Sabina" [Cecrops and daughter] at the west end and "a head or two of sea horses with some mutilated figures" at the east. The subjects of the metopes were identified as the battle of Centaurs and Lapiths.

The subject of the frieze was rightly described: "On the frieze in *basso-relievo* the solemnity of a sacrifice to Minerva, of which the greater part is in good preservation, containing a procession on horseback. On two stones which have fallen are oxen led to sacrifice. On another, fourteen feet long [from the centre of the east front] are the Virgins which assisted at the rite . . . with other figures—one a venerable person with a beard reading in a large volume [the folded cloth], which is partly supported by a boy. This piece now inserted in the wall of the fortress is supposed to have ranged in the back front of the Cell. The sacrifice designed to be represented was probably that performed at stated times by the Athenian cavalry."

(To be continued.)

Flatford Mill.

Flatford Mill, the birthplace of Constable at East Bergholt, Suffolk, has been presented to the nation by Mr. T. R. Parkington, of Ipswich, Willie Lott's cottage adjoining the mill, which was also closely associated with Constable's boyhood, is included in the gift. Constable started life as a general helper to his father, who owned the mill. At the age of 23 he definitely adopted art as a career, and painted most of his best pictures in the neighbourhood of his birthplace.

ARCHITECTURAL STYLE*

EVERY reviewer, sooner or later, has to resist the temptation to criticise a book for not being some other book. Despite the title of this one, we would have preferred some other title—such as "The Grammar of Style." Or, to put it otherwise, we have enjoyed this book much more, we think, than if it had been confined to architectural style—or what we imagine to be architectural style. We have merely questioned the title, partly because the author himself, in the answer to one of his own questionnaires, is not particularly concerned about style or diversity in style, and partly because in his introduction, he makes it clear he is not discussing the sense, use, or function of architecture. The omission of these factors leaves the author free to discuss certain qualities in style. He discusses "the language of architecture, rather than the subject which is revealed by means of that language." Most of us, at some time or other, have tried to absorb a number of discourses on literary style, and at the end we have been told we were trying to beat the wind. Now this is precisely what Mr. Trystan Edwards does not do; he leaves us decidedly richer at the end. He has a good deal to say about the analogy of language, and we cannot do better than follow it up here. He leaves us with the impression that if the architect has never suffered from the leanness of his vocabulary, he has worked—until now—in ignorance of the grammatical use of the vocabulary.

Less than half-a-century ago, Matthew Arnold pressed for more and more grammar in the elementary schools; whereas now it is being realised that language comes first and grammar second. Many authorities are agreed upon the value of grammar taught at a later stage, when it is regarded as the science behind the art of literature and the practice of composition. It leads up to a critical examination of standard prose and standard poetry, and to the revision and correction of one's own writings. With this analogy in mind, we can visualise the influence upon the architect coming fresh to a study of Mr. Trystan Edwards' architectural grammar. To develop the analogy further, we do not imagine the author would maintain that grammar would give the architect ideas, or that it would give him words in which to express his ideas. What he can claim is that grammar will enable the architect to express his ideas correctly. It is possible we may be doing the author an injustice in stressing so much the question of grammar, especially when we feel compelled to admit that his grammar does suggest ideas.

No doubt every one has a different conception of what he means by architectural grammar. If we regard the classic order in its completeness as a grammar, we can find the whole thing tacked on like a Latin tag to hundreds of buildings. On a much larger scale have we interpreted Mr. Trystan Edwards' conception of grammar. He deals with whole buildings and with groups of buildings. The classic order (our little grammar book) is but a small part of a design (and our mental outfit), and then it must be properly punctuated and inflected as a part of the complete design. His canons of Number, Punctuation and Inflection are entirely convincing. No one can have the slightest difficulty in following the carefully reasoned philosophy and argument, accompanied as they are with hundreds of sketches illustrating every step. It is certain that an application of the principles contained in this book would result in a measure of formal beauty, quite independent, as the author says, of the "style" of architecture in which the artist happens to be working.

The chapter on "Plan"—excellent as it undoubtedly is—is the only one which raises a question of doubt in our minds. Our range of vision on plan is not so comprehensive as our vision of a building in elevation. The value of inflection on plan is clear when we come to regard its effect in elevation, but it seems possible to apply a grammatical inflection (on opposite sides of a building, for instance), which could be realised only from an aeroplane. This, however, is a minor detail in an excellent contribution to the appreciation of architecture and the craft of building.

"DAILY MAIL" IDEAL HOUSES COMPETITION

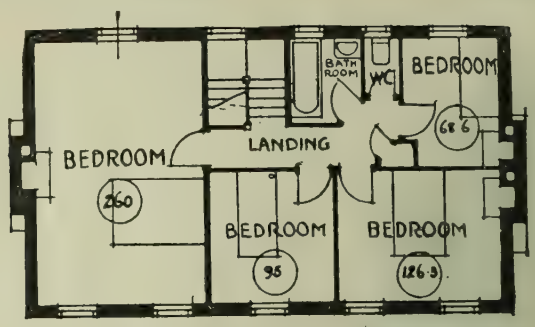
WITH regard to this competition, the results of which we publish this week, we append part of the report of the assessors, Messrs. E. Guy Dawber, Louis de Soissons and C. W. Miskin.

Dealing first with Class "A," houses costing £1,500, the assessors state: "The design placed first submits a simple straighforward plan and elevation. The plan is compact, and the kitchen arrangements are well worked out, with this department well cut off from the rest of the house. The sanitary arrangements are combined in one group economically for the disposal of waste pipes and drainage, &c.

"The construction of the house has been well considered, with a simple straightforward roof, a number of the walls being carried up through the two floors, and care having been exercised in isolating the lavatory from the sitting-room with a hollow wall. The elevations are quietly and simply treated without any unnecessary ornament and would be well suited for any garden city or suburb development.

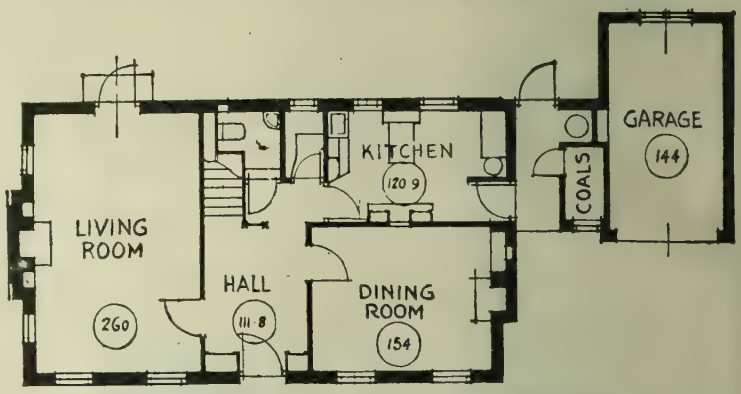
"The design placed second also shows a plain, straightforward plan, well arranged, with the exception of the kitchen, which opens direct into the hall, though being somewhat shielded from the stairs, this is not of very great importance in this particular instance. The design has been premiated because it shows a house of good character, with all the attributes of quiet simple architecture. The elevations are particularly happy, and show that this competitor has grasped the essentials of a simple house and not aimed at anything pretentious or to imitate a house of much larger scale.

"The design placed third is a good plan, and though the position of the larder in relation to the kitchen and hall could be improved, we consider the general lines of the design to be sound. The house could, with care, be built for the amount stipulated, but the adoption of parapet walls and copings to the roof adds to the cost unnecessarily.



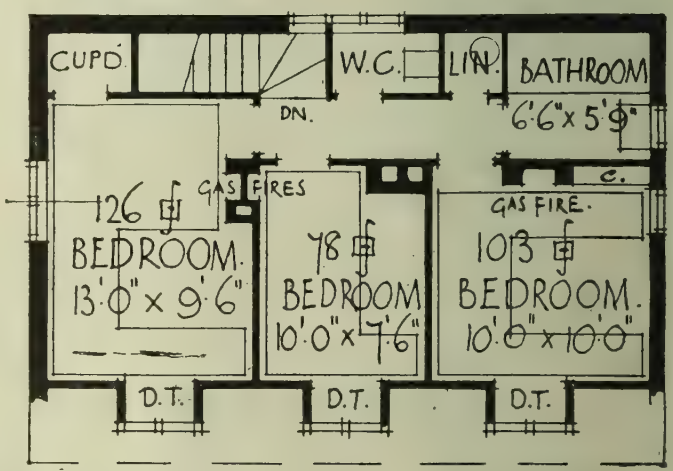
"Dealing with Class 'B' (Houses costing £850), we have placed the winner because of the general excellence of the main lines of the plan and the character of the small house expressed in the elevations. This is in every way an excellent design, giving all the accommodation asked for, well arranged, and treated in a pleasant manner. We feel that we must criticise the w.c.'s, which on both floors appear somewhat narrow, but this is only a matter of adjustment, and in no way upsets the general arrangements.

"The design placed second shows the value of the 'L'-shaped design to help the general grouping of the houses along the road. It is a plain straightforward plan and elevation all well arranged with the exception of the larder and coals, but here again it is simply a matter of adjustment. This design shows a particularly good bedroom plan.



"The design placed third shows a very pleasing treatment in the character of the elevations, and is all that could be desired and expected in a small house of this type and cost."

Ancient Roman Houses.



At the annual meeting of the subscribers to the Faculty of Archæology, History, and Letters of the British School at Rome, held at Burlington House, Piccadilly, Mr. Russell Meiggs, lately Pelham student of the school, gave an account, illustrated by lantern slides, of the excavations at Ostia. He said about a quarter of the town had been unearthed. He described how it was founded at the mouth of the Tiber to form a harbour for Rome. The excavations, he said, had shown the practical methods adopted by the Romans in planning the town. The houses were different from those of Pompeii, which had hitherto been taken as a type of a Roman house. They could imagine the houses at Ostia, with three and four stories, being modern in character. Many of them must have been let in flats, as they contained complete sets of rooms. There was a house of five stories with solid stone balconies. In many cases the ground floors of houses were used as shops.

THE MONUMENTS OF HUNTINGDONSHIRE*

THIS is the tenth of the series of volumes of the great survey of our national monuments published at prices varying from 13s. 6d. to 40s. We need hardly remind our readers that it is subsidised literature and that they may thankfully accept it as such. The volumes of the survey disarm criticism and eulogy is unnecessary where selection of subject matter, paper, printing, illustrating and general format are so good.

The terms of appointment of the Royal Commission, under date April, 1909, are that they "make an inventory of the Ancient and Historical Monuments and constructions connected with or illustrative of the contemporary culture, civilisation and conditions of life of the people of England, excluding Monmouthshire, from the earliest times to the year 1700, and to specify those which seem most worthy of preservation." The limit date of 1700 was extended to 1714 in an amended instruction (1913). This question of preservation in the case of Huntingdonshire, as in the previously published sections of the review, is placed well in the forefront, and the Commissioners recommend a very considerable list of monuments in the county of Huntingdonshire as "specially worthy of preservation," comprising seven items of earthworks and Roman remains, twenty-five parish churches and twenty secular buildings which include two castles (Kimbolton and Leighton Bromswold), a palace (Buckden), lesser houses, halls, manors, the remains of an abbey (Ramsey), and five ancient bridges.

The county of Huntingdonshire is made up of five "hundreds"—Norman Cross, Leightonstone, Harstingtone, the Borough of Huntingdon, and Toseland. There are one hundred and two parishes not counting Tilbrook, which, curiously enough, belongs to the hundred of Stodden, in Bedfordshire. The report records 1,221 monuments, an average of 12 monuments per parish. If we look for cathedral cities, we shall not find them in Huntingdonshire, but must seek them over the borders in Ely and Peterborough. Of abbeys there is but one, or the few original remnants of one, the Benedictine Abbey of Ramsey, founded by Ailwyn in 969 and dissolved in 1539, when it passed into the hands of Sir Richard Williams (*alias* Cromwell). Near by the site of Ramsey Abbey Church stands Ramsey's parish church dedicated to Saint Thomas of Canterbury (*c.* 1180 and later) and as an earnest of the quality of the volume from the archæologist's point of view, the following short excerpt will suffice: "The chancel has a quadripartite vault of rubble with plain square diagonal ribs springing in the eastern angles from restored attached shafts with cushion-capitals, and on the W. from the side-shafts of the responds of the chancel-arch; the crown of the vault drops towards the N. and S. in the manner known as Angevin."

"The manner known as Angevin" is just what we should expect in a church dedicated to Becket and built in the last years of his great friend and enemy, Henry of Anjou. The chancel vaulting is reminiscent of that in Henry's own hospital at Angers, and there is also a corresponding feature in the splayed single-light windows. At the time Henry II was building his hospital (1177–1184) he was holding his court at Angers, and the English as well as the Norman prelates were going backwards and forwards, and doubtless one or other brought home the idea for this new departure in vaulting and wedded it to earlier forms of arcading which we see in the nave at Ramsey. Instead of Ramsey's massive pillars and cushion-capitals, at Angers hospital we find slender circular columns with delicately foliated capitals.

A popular county guide book would, in all probability, dismiss Ramsey's parish church in a few bald sentences, stating that it is a fairly well preserved building of late twelfth century architecture, with the usual transitional features from late Norman to Early English Gothic and later fourteenth to sixteenth century additions and restorations, and a west tower constructed about 1672, adding a stray word, perhaps, to a font of dark grey marble of late twelfth or early thirteenth century, and a passing reference to a partly restored lectern of the fifteenth century. On the other hand, the survey devotes nearly three pages to a careful analysis of this church, in addition to three full-page views of the interior and exterior together with a plan and smaller illustrations of sundry details. We are told that "From the unusual features of the plan it appears almost certain that the building was designed as a hospital, infirmary and guesthouse, or at any rate, was built on the plan of such a building and not that of a parish church; it conforms in every particular including the lack of a tower (in the original plan), to the most normal arrangement of a mediæval hospital, the 'nave' forming the hall of the establishment and the 'chancel' the chapel. It is quite possible that the hospital became a parish church in the fourteenth century, or even earlier," and so on with references in comparison with Newark Abbey at Leicester and the recovered plan of Sawtry Abbey.

The selection of Ramsey as illustrating methods of the Commission will not raise feeling of jealousy on the part of dweller Huntingdon, St. Ives, Godmanchester, or of the hundred-and-two parishes in the cou Incidentally, mentioning Godmanchester, t in its parish church, will be found a great w of fifteenth century carving—bench ends complete stars with a fine series of miseric many of which "details" are reproduce the book. Huntingdon is rich in quite churches: three at least retain struct remains of the Saxon period, and whilst com buildings of late eleventh and twelfth cent are comparatively scarce, there are man thirteenth to fifteenth century in exce preservation. A striking feature of the landscape is the tall octagonal broach-s with their delightful traceried and gabled li It is a county of fine towers and spires, an on a rough computation, there must be a ch to every six square miles, the Sabbath must be musical with bells.

"The cultural level of the population," are told, "had probably varied but little many centuries before the coming of the Rom It was, indeed, imposed by exacting ph graphical conditions, which the modern eye r to some extent reconstruct. Apart from gravel terraces bordering the river syst practically the whole county consists of lands, doubtless then densely forested, a fringe of fen land on the east"; and as dry habitable areas were few and far betw ambitious immigrants from neighbouring tricts were naturally few, and the fen-b and forest-covered regions afforded little op tunity for the acquisition of wealth and poli power. But that is not to say that the Ro invasion left Huntingdonshire untouched; the Imperial legions have left us one g "monument" in that section of Erm street which traverses the county practi from north to south.

It takes many minds to make a commu and the part is not greater than the w in the composition of a countryside. If Hunt donshire is one of the minor counties of Engl it still behoves us to know it and to kno intimately. It has its simple beauties of f and field, and it is a country of vast solit where, in places, the horizon is seemi infinite. But it is a county of much a tectural and archæological interest, and able "survey" before us will well r a careful perusal of its pages.

The volume contains 350 pp. of letterp (properly indexed), 166 plates from photogr representing several hundreds of "monumen of various kinds, a large number of plans in text and a key map of the county.

THE WORK OF THE ARCHITECT

By T. P. BENNETT, F.R.I.B.A., Hon. F.I.O.B., Hon. F.I.B.D.

THE work of few men in any calling can be so diverse as that of the architect. His outlook must embrace artistic, theoretical and practical knowledge, and behind the actual production of his buildings must lie real ability to appreciate the conditions under which he is living and the people amongst whom he moves and works.

HUMANISM.—Because of its indefinite character, it is interesting at first to realise something of the psychological aspect of building. It means that the architect must be able to visualise the general trend of contemporary life, to foresee points which his clients will expect to find adequately provided for in a new building, to know by instinct or by examination the features which are regarded as of paramount value to the user of the building, and this involves real ability to appreciate the methods of living and the ideals of the members of all classes of the community. It means that the architect must be able to put into perspective the Conservative, Communistic, Socialistic and the Liberal views of separate classes of a nation and must be able to deduce from this mass of individual opinion the general trend of contemporary thought.

Not only is it necessary to appreciate the standard of living of the mass of the people, it is essential that the architect should be able to establish sympathy with any particular outlook, to know whether a man in his home or business environment wishes to emphasise his reticence in decoration or the importance of his social position, to design a building which really expresses the individuality of its owner. The architect must be able to work with men and women of a great number of social grades. He will come constantly into contact with men of culture and intellect, with pure business men and women, with artists, with tradesmen, contractors, clerks of works, foremen, artisans and labourers, each of whom will have his particular portion of the work to perform. Co-operation of all is necessary if the building is finally to achieve distinction as a work of art. The architect becomes a great conductor producing music from this diversified collection of players.

PROCESSES.—Turning from this study of human nature, it is next necessary to have an accurate working knowledge of the building which is being designed; to know the exact processes which it will house; to have first-hand knowledge of their inter-relation, and in many cases to discriminate with fine distinction between parallel processes which superficially appear to be the same. Thus the successful house designed for a craftsman or a miner or labourer will have difference of planning and will be different in appearance from that designed for a man earning a similar income but possessing a different social outlook. The suburban house will differ in many essentials from the town house, and houses in Mayfair will differ from those in Kensington, while the translation of domestic requirements from houses into flats will bring into prominence subsidiary social habits which affect planning. Assuming that the work of an architect is not confined to the production of one class of building, he will need to have an accurate knowledge of the working of other industries; thus the retail shop will need a particular knowledge of retail trade.

A curious inter-relation of facts comes into light in connection with width of road, width of pavement, aspect, length of shop, the design of the window, the design of arcades, entrances to and disposal of the upper parts, the heights floor to floor, the use of the basement, and other features, while the planning of the factory, theatre or cinema will similarly involve first-hand, accurate, and unmistakable knowledge of the habits of the playgoer and of the actor. Perhaps at times the architect too lightly accepts the supposedly accurate knowledge of the users of these buildings, only to find that in many instances that knowledge has arisen from habit in an old building and is a very precarious guide to the layout of a new structure unhampered by incidental circumstances which in older premises have become part of the working arrangements with which the user is familiar.

DRAUGHTSMANSHIP.—Draughtsmanship springs into prominence at an early stage in the education of an architect, and because of this prominence it is easy to place too great an importance upon the high standards which modern work demands. Draughtsmanship is important because it is the handmaid of production. It is, to the architect, the means by which he crystallises his ideas. He must be able to transfer to paper a fleeting impression, an imperfect idea, a half-formed vision of a completed building as soon as it is focussed in his mind's eye. A halting facility with pencil, pen or brush impedes the work of the brain and interrupts the flow of ideas. Rapid draughtsmanship and fine drawing are a necessity to the designer. They do not in themselves produce good design, neither do they make a designer. The brilliant draughtsman is attended by unmistakable risks. His ability to draw may lead him to disguise the shortcomings of his own composition and detail and produce a good drawing rather than a good design. Lack of balance in the building may be hidden by false balance in the drawing; it is so easy for the perspective artist to add irresponsible subsidiary features to the composition, such as trees or motor-cars or people, and thereby supply a focus which the architectural composition lacks. Draughtsmanship, in other words, is an indispensable handmaid but an extremely dangerous master.

ELEMENTS.—In the background of the brain of the architect there must be a real understanding of the importance and effect of a large number of facts which will have a very substantial bearing upon the final architectural production. These facts have varying degrees of importance and varying effects upon the architectural conception according to the type of building which is under discussion, the position in which the building is to be erected and many other extraneous circumstances. It is left to the architectural sense of the architect to give to each its proper weight and proportion for the particular scheme in hand.

In some periods of architectural history attempts have been made to ignore some or all of these elements, and while in such cases it would be untrue to say that the result has been disastrous, it must, nevertheless, be accepted that in so far as they have been disregarded the production of a perfect building has been rendered impossible.

(*a*) Climate.—The first, and one of the most important, of these elements is climate. Climate is often given too little importance in the building. It is climate which dictates the size of the windows, the amount of the opening space, the form of the roof, the introduction or otherwise of the arcade and the portico, and in many cases determines the thickness of the walls. Climate is an indeterminate element which may or may not dictate the use of a particular feature, but which is nevertheless a governing factor in the design of every building.

(*b*) Construction.—The second element which is of very great importance is that of the construction of the building. It is possible that Greek building is the only perfect example of trabeated and Gothic building of arcuated masonry construction, and if this is so then these are the only groups of buildings in Western European architecture which completely fulfil the demands of constructional expression. Such a narrow view of structural permissibility would be so severe as to eliminate many acknowledged architectural masterpieces, and therefore the term "constructural limitations" must be imposed with very careful reservations.

Construction must be the servant of the design and not its master. It must therefore be legitimate to use construction in any way which serves the end of the design, but if a certain limit of reasonableness is passed and steel, concrete, stone, brick or wood are so distorted in their method of application as to absorb abnormal cost or obviously wasteful construction, they offend the sense of fitness of the designer, and when pressed beyond certain points must be regarded as architectural defects of a serious character.

(*c*) Mechanical Equipment.—The modern building houses in many cases a large amount of mechanical equipment, which may have an important bearing upon the design of the building; thus the great ventilating trunk of a Plenum system should not be a mere engineering device on the face of the wall but should be incorporated in the decoration in such a way that it becomes part of the scheme of the interior. Radiators have for a long time been merely placed on the floor and hidden as far as may be with a coat of paint. Thus to handle ventilating and heating adjuncts is not, strictly speaking, architectural, and in so far as these units have failed to be incorporated in the architectural scheme the latter must be considered to be incomplete.

(*d*) By-laws.—A further element ever present with the architect, especially in important towns, is the limiting effect of by-laws. By-laws may be mere superficial rules leaving the whole of the decision with regard to construction to the local surveyor, or they may consist of an elaborate code, such as that incorporated in the London Building Act, which will govern the plan, elevation and lay-out of the design from first to last.

(*e*) Finance.—A further element of design in building is found in dealing with the financial aspect of the scheme. It must be wrong to disregard finance. The simple house or cottage is found to be good partly because it adequately recognises the restriction of money. Financial possibilities are present in some form or another in every class of building, and consciously or unconsciously they affect the design.

(*f*) Site, Land, Aspect, etc.—Finally, there are restrictions of site, of level, of aspect, and of surroundings which have their reflex action upon every new work of architecture which arises in their midst. With these aspects of humanism, these details of working arrangements and these diverse elements at the back of his brain, the architect sets to work to produce—

THE DESIGN.—Design is rightly accepted as the real basis of architecture. Design is the production of the particular form of a particular building. It may be summarised as a crystallisation of facts made beautiful, but it embraces so many facts or features that any brief summary, however apposite, is almost bound to be misleading. The design must be supreme in fitness and suitability. It must obviously be in the realm of the practical. It must be produced with economy of effort. The finished façade must appear to be the result of spontaneous thought, and although it may have solved many exceedingly difficult practical problems it is an axiom that it must possess in apparently effortless serenity the elements of beauty.

(To be concluded.)

New Venice Bridge.

A proposal is understood to have been placed before the Venetian Council for the construction of an ornamental stone bridge in place of the iron structure that spans the Grand Canal between the Campo San Vitale and the Academy of Fine Arts. The present bridge, which spoils one of the most charming stretches of the canal, and which is entirely unsuitable for modern traffic requirements, was built about half a century ago, and every year much money has to be spent on repairs. The proposed new bridge, which would be wider than the Rialto and would be nearly 28 ft. high, has been planned by Signor E. Fagiuoli and the design has been favourably received in artistic circles in Venice.

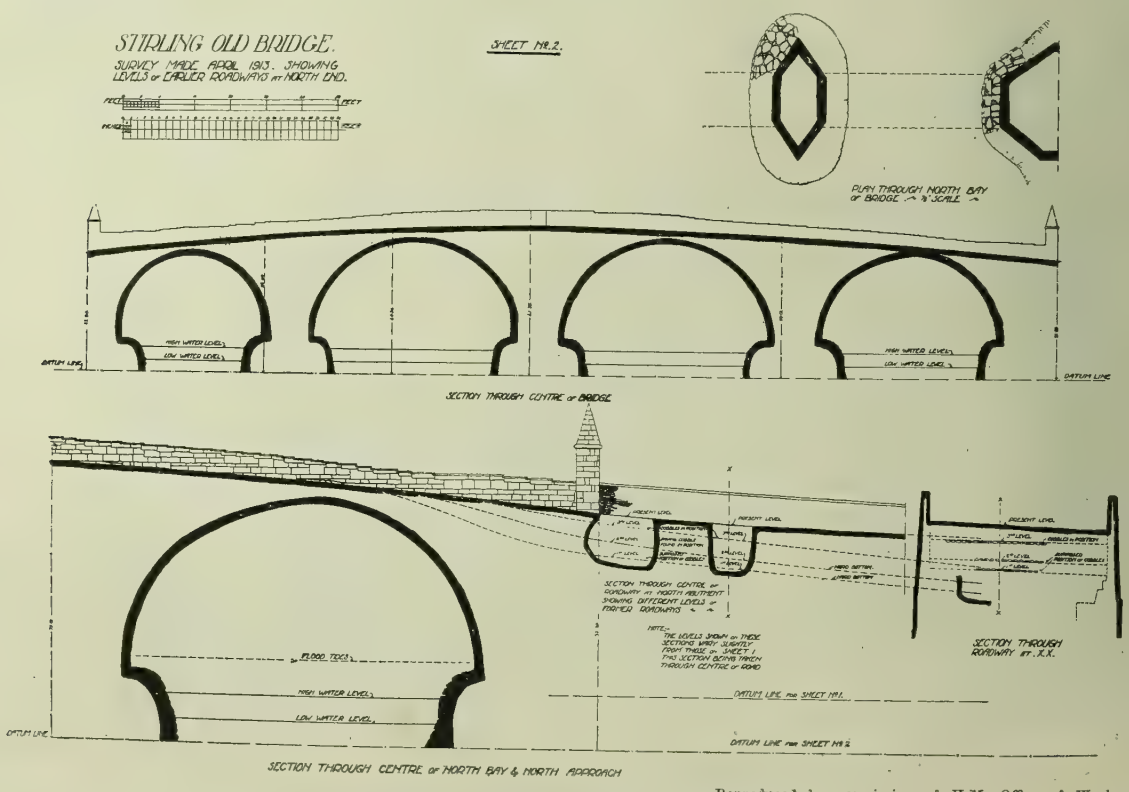
THE REPAIR OF ANCIENT BRIDGES

By WILLIAM HARVEY.

"In bridge building two conflicting interests have to be reconciled, for the designer has to provide free and sufficient space on the roadway over the bridge for the traffic of the district, and a clear waterway below the arches supporting the road. In almost all aspects of the case these two considerations govern the shape of the finished work, and ancient bridges often charm as much by their admirable disposition of structural strength, appropriate to their old-world uses, as by the beauty of their detail and the colour that has been applied to their mouldering stones by weather and lichen.

To effect a balance between facilities for road travel and water flow is never altogether easy. To span the stream in a single arch may mean a steep rise in the road up to its summit, or, if the road is made level, it may imply the provision of a dangerously flat arch, or of a series of arches of excellent shape, perhaps, whose supporting piers obstruct navigation and impede the flow of the river. Viewed from the standpoint of liability to decay the bridge is seen to be exposed to several dangers which will bring about its downfall in process of time. The materials are subjected to wet under water level and to varying degrees of dampness above, but beside this frequent cause of decay, the piers may be battered in flood time by floating objects, or pressed upon by ice as it forms—and expands as it forms—during frosts.

An even more severe and insidious cause of decay is the scouring away of the river bed from between the piers which leaves their foundations deprived of lateral support and free to squeeze out under the load. With arch pressures to be resisted and water pressures to be met, the bridge may well require periodical repair to keep it in service, and as a matter of fact, old bridges do require repairs of the most varied description.



Old London Bridge suffered continually from the erosion of the river bed by the violent tides which scoured away material from between the foundations of the piers. This old Gothic construction of "nineteen great stone arches secured by piles of timber drove to the bottom of the river, having a drawbridge towards Southwark," took up such a large proportion of the waterway with its many piers and the sterlings upon which they were founded that it had the effect of a dam and held up several feet of water.

The result was that at particular states of every tide the flow amounted to a waterfall with swirling eddies which sucked deep pits near the piers and deposited dangerous banks of sediment at a little distance from the bridge. So vigorous was the scouring action that after a new great central arch had been erected in 1759 in place of two old ones, the supporting piers were found to be in danger of subsiding into the pits in the river bottom. In this emergency John Smeaton, the celebrated engineer, was instantly summoned express from Yorkshire to relieve the difficulty. Coming almost immediately after his triumphant completion of the third Eddystone Lighthouse, this appeal to a man who had experienced the ways of running water was made with the utmost confidence, and his advice was accepted and acted upon the same day that it was given. The old City Gates had been demolished some months previously, but at Smeaton's instructions the stonework was brought back "and the work commenced immediately, although it was Sunday morning." Thousands of tons of rubble stone were brought to the spot and thrown into the pit to form a level and fairly smooth bed for the river between the two piers most heavily loaded by the "new" great arch. This precautionary repair of the foundation executed in 1761 was insufficient to prevent great damage by high tides, and by the pressure of ice in the early part of 1763, when parts of the ancient sterlings were washed away from around the bases of the piers whose foundations on the dry chalk rubble of the sterlings were exposed. It cost £6,800 to repair the damage.

A severe frost in 1768 had somewhat similar effects, and a great many tons of Kentish ragstones were again thrown down beneath the great central arch. The temporary nature of the benefit and the permanent danger to navigation which these elementary repairs produced soon became apparent, though it is probable that without them the ill-founded old bridge would have subsided and crumbled to pieces, just as Waterloo Bridge is doing at the present day. The vigilance of the surveyors who noticed the erosion and plumbed the depth of the river bottom in time to prevent disaster was certainly to be commended, even when the measures of repair were of limited efficiency. Lack of cohesion in the mass of rubble at the river bed was at last recognised as the reason for its rapid erosion, and in 1793 and 1794 nine baulks of strong timber were sunk down to the river bed between the sterlings of the piers of the centre arch. These beams were held in place by upright timbers at their ends, but the device was only partially successful, for only two of the beams were found in place in 1799 when the work was surveyed by George Dance. The good effect of continual attention to the duty of surveying and making minor repairs on the principle of the "stitch in time" is to be gleaned from the fact that the great arch had only subsided 2½ in. in the centre of its span when it was surveyed by Francis Giles in 1821.

In this case of old London Bridge the question of architectural style did not enter into the problem. It is true that the "new" great arch of 1759 was supposed to be in the Gothic style, but its Gothic character was only nominal. Repairs to the sterlings were also opportunist patchings in the form of added timbers or added filling of chalk as the immediate needs of the moment suggested. The actual size of the sterlings increased as time progressed and as new layers of piles accumulated about the existing old ones which were seldom taken out for fear of weakening the foundation. As a consequence, the sterlings became increasingly obstacles to navigation. Partly because their great projection contracted the channels, and partly because boats became stranded on their shelf-like tops and fell off the shelf as the tide ebbed.

Repairs which are designed and executed in such a manner as to retain the original shape and character of the bridge, and to preserve

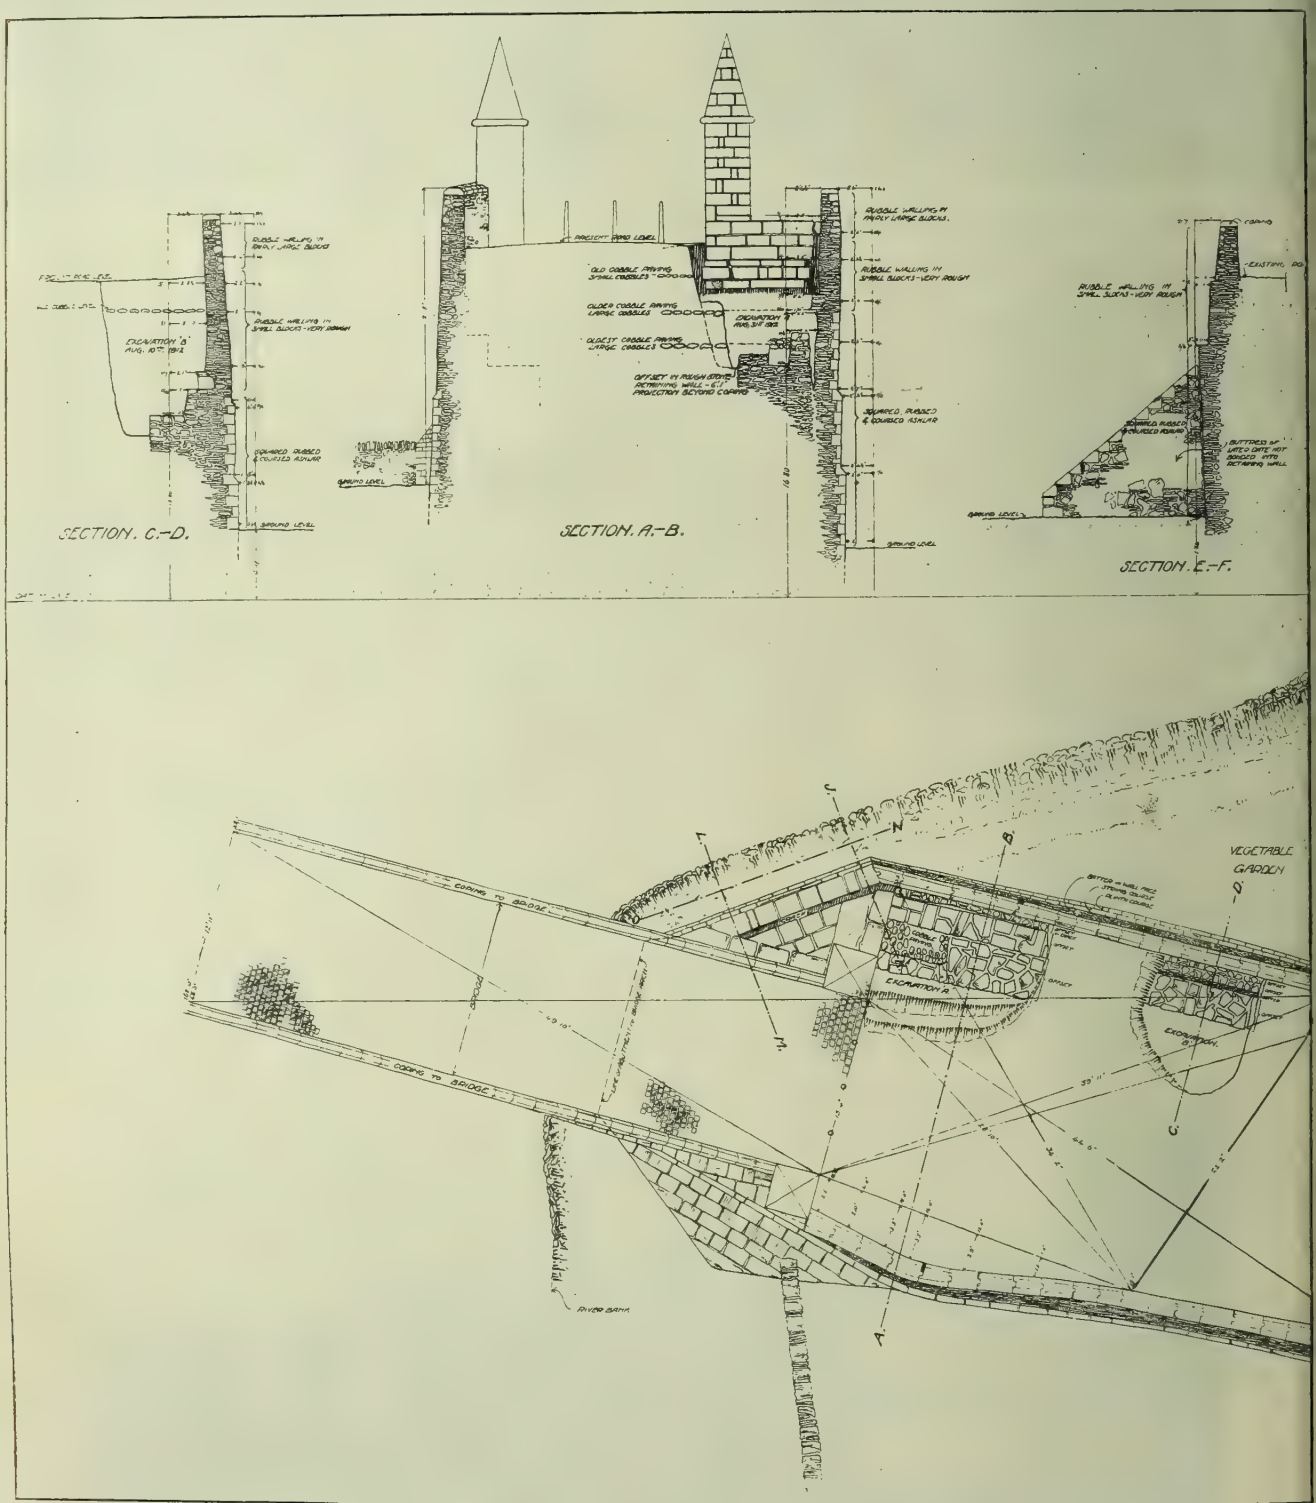
New Cobble Paving in harmony with Ancient Work.

Stirling Old Bridge.

s actual material are far from common, and re only applied in cases where the old bridge s recognised as a monument of great historical r artistic importance.

In these cases, the opportunist regime of emporary patching cannot be relied upon, nd a considered scheme is prepared at the eginning of the repairs in strict reference to he principle of retaining all ancient work n place and adding only the minimum of new aterial where it will be as little conspicuous s possible. To ensure that such a scheme shall o justice to the structural as well as the artistic haracter of the decaying bridge, it is absolutely ecessary that every source of weakness shall be lly understood at the commencement. To is end the work is surveyed in a specially inute manner and all its deflections and actures are recorded on the survey drawings. o a certain extent, the process of surveying nd drawing out elaborate plans, elevations nd sections, reveals the nature of the forces t work. There is a reason for every bulge and ack, and before a cure is attempted it is ecessary to determine what forces are at work roducing the defects. The stresses in the ructure are carefully analysed and the results f theoretical calculation are critically examined n the work. The continuous nature of decay nd the effects of time have also to be considered connection with bridge repairs, though they e but poorly represented in the formulæ con- ined in the usual text-books on constructional ience, and a long view must be taken in order at the repairs may be effective over a period years proportionate to their cost. Even the most satisfactory and scientifically applied repairs will require periodical renewal, for the water pressures being continually re-applied, there is a definite cause for further damage and a need for continual vigilance.

Stirling Old Bridge repaired by H.M.O.W. Historic Buildings Branch may be taken as a good example of the modern scientific repairs which may be applied in cases where the ancient appearance is to be preserved. The size of the bridge and its state of dilapidation were such as to bring it just within the scope of the power of cement grout to provide adequate coherence to the old masonry without resort to tensile reinforcement, though very considerable quantities of whinstone rubble were used in making good pits in the river bed and in rebuilding parts of the old sterlings where they had been washed away by the force of the current. The depth of water varies from 15 ft. at the end of the ebb in dry weather to between 30 and 40 ft. at high floods, so that the sterlings and the piers are subjected to very considerable pressure, though there is nothing comparable to the definite waterfall of old London Bridge. But in addition to the decay of the piers and their foundations, the arches, the spandril walls, parapets, and the retaining walls of the north and south approach roads all showed signs of dilapidation. The earth filling below the cobble-paved roadway was pushing out the face walls at several places, though not to such an extent as would make re-building imperative. To preserve the bridge with all its antique character and yet to re-establish its structural strength, it was decided to make it as nearly monolithic as possible by the help of cement grout and by such necessary re-building of defective portions as could not be avoided. No single pier seemed to be in urgent need of underpinning when the bridge was examined, but defects in every part required attention if subsidence and piecemeal disintegration were to be avoided in future.



As a great many of the cracks and bulges were of such a nature as might be attributed to the denudation of material from all parts of the work, it appeared probable that the reinstatement of sufficient sound new material in every place where old had been washed away might prove sufficient to stabilise the old bridge. A scheme for surrounding the sterlings of the bridge piers with sheet piling was formulated, but was purposely held in reserve until time should have shown the measure of effectiveness obtainable by the process of internal consolidation.

One cause of trouble that was revealed by careful enquiry was the increased weight of the road filling above its original level. The spandril walls and the retaining walls of the inclined approach roads were severely stressed by lateral pressures applied by the retained earth and were found to have bulged outwards in response to them. In many places the bulges were increased and made more dangerous by the decay of the mortar and its replacement by the swelling roots of briers and weeds, and in some parts the retaining walls were so far out of perpendicular that they had a clear space behind them, the "retained" earth having exerted its pressure at a lower level. The walls were strengthened by excavating pits and trenches wherever

Stirling Old Bridge, before commencement of repair.

necessary beneath the paving of the bridge and its approaches, and building an internal unseen additional thickness of walling to withstand the pressure of the earth. The outer faces of the masonry were scrupulously preserved by raking out the decayed mortar, the dirt and the matted roots, and then tamping in sound new mortar composed of Portland cement and sand in the proportion of one of cement to three of sand. The cement mortar was forced well home into the crevices of the work to a distance of 21 in. in some cases, and. where cavities extended beyond the reach of efficient treatment by hand tamping tools, the interior was either strengthened by additional material as just described, or consolidated with machine grouting. As far as possible, hand grouting into cavities purposely raked clean was resorted to, and different tools were prepared to deal with the different width of the irregular joints. If the space between stone and stone proved too narrow for the effective employment of the normal mixture of cement and sand, a richer mortar was used to ensure complete penetration of each cavity and definite adhesion of the jointing material to its surroundings. The work was constantly examined and joints were cut out from time to time to demonstrate the sound character of the tamped material. Under these conditions, the wall can veritably be made monolithic as far as the good hand-grouting may be made to penetrate, a the standard of execution demanded is such th the stone will crack before the joint will pa The cement was forced back 2 to 2½ in. from t face of the wall and a pointing of Arden lin and washed pebbly sand added to mainta the appearance of the old surface. To preve the new pointing looking too crude it w sprayed with clean water as it set in order bring the grains of sand to the surface a reproduce the mellow effect of years of exposu without in the least affecting the strength the joint. Repairs to the under-water portio of the sterlings were executed in a manner son what reminiscent of the experiment put in ha

Stirling Old Bridge: Part of preliminary survey carried out by H.M. Office of Works (Historic Buildings Branch), before repairing the structure.

John Smeaton at London Bridge, except at more care was taken in posing the material the bottom of the river. Blocks of whinstone m six to nine hundredweights apiece were rried down in a sand barge, which was guided o position with ropes, so that the stones uld be placed where they were most needed. mound of heavy stones was formed from the er bed around the outwater of the middle pier. here floods had carried away part of the ster-g, and as soon as the pile of stones rose a foot ove low water level the work was grouted with at cement between tides. On this foundation, e damaged masonry of the sterling itself was built with large roughly dressed blocks of hinstone, the lower courses being grouted in at cement, and the interior with cement and nd in the proportion of one to two. Both fore and after the execution of these repairs, nown positions of former fractures were kept nder periodical examination, and at important sitions, such as the junction of the bridge roper with the approach roads, the masonry as furnished with permanent brass tell-tales y means of which any further movements uld be detected.

Some difficulty was experienced in treating e old arches to the processes of consolidation y raking out and grouting the joints. As the rches had settled and become distorted in the rocess of building and by settlements sub-quent to that date, some of the joints at the ntrados were squeezed together almost "hard o hard," as masons call it. On the extrados he same joints were open and gaping, and the uzzle was to force in cement through the arrow to the wide open part of the joint, as ell as to clean it out in the first place. It as vital that the arch ring should be sound, nd special fine steel tools were forged to deal with the difficulty, every joint being packed ull of cement and pointed with a substantial dging of lime mortar penetrating 2 or 2½ in. nto the work. A few stones which were found o have been burst by the arch pressure through heir having been originally "face-bedded" with their laminations parallel to the soffit of he arch. A very few had to be replaced with ew stones, but in the great majority of cases he packing of all joints and cavities with cement proved sufficient. One work which proved necessary as a preliminary to adequate internal reatment was the removal of the unsightly nd useless patchings of superficially applied Portland cement which had been smeared across the joints and some of the stones in former attempts at repair. Ever since the introduction of modern, hard-setting cements the repairer in a hurry has been tempted to resort to this miserably inartistic and inefficient misuse of good material. Such superficial smearings only suffice to entrap water and direct it into the interior of the work, for they are not in the least degree watertight, and considered as repairs directed to the resistance of structural pressures they are altogether delusive. With the devices now available for working in the dry below water-level, either in the shelter of a coffer-dam, or by means of excavations carried on with the aid of compressed air, the repair of very large bridges has become a matter of discretion. If it is thought proper to retain such a structure as Waterloo Bridge, there is no insuperable structural difficulty in the way. The ideal carried into practice at Stirling Old Bridge would govern the principles of the work, and the maintenance of the present appearance and the genuine old material would be a paramount consideration. The exact measures adopted at Stirling would also apply in part, though they would need to be augmented by the provision of suitable temporary falseworks and centres, and by a frame of reinforcement to be introduced between the crowns of the arches and the roadway to make good the loss of continuity in the structure through its partial dislocation. Tensile reinforcement becomes necessary in such cases when the additional strength obtainable by means of cement grouting cannot be considered sufficient to meet the stresses in the building as a whole, although grouting may still suffice to mend a great deal of the masonry in detail.

A RE-HOUSING SUGGESTION

By HAROLD FALKNER

MANY changes have occurred in the roads that lead out of London, but not the least distressing is the change that has come over them in the last ten years. To people who drive out constantly it may not be very noticeable, but to anyone who has that experience after a lapse of a few years it is very apparent. Before the war the suburbs ended at Kingston—Hounslow and there were gaps in between, now those gaps are filled. Districts such as Bookham were then rural, now they are devastated by the increase of small bad buildings, and this in spite of the restrictive influence of high building costs.

It is not suggested that restraint should be placed on those who really prefer living in what may be termed the outer suburban fringes, but the general aspect of some of these new colonies seems to suggest that their inhabitants are not stimulated by desire for a country life but by the dire necessity imposed by the absence of an alternative.

If this development is taking place at present prices, what would be the rate if building prices were brought down to the same relative rates that the motor industry now bears to its pre-war rates? In a few years, nothing that in any way represents a countryside would exist—at any rate within forty miles of London.

I propose, therefore, in this article, to consider what seems to be the only serious alternative. There are two ways only of expansion: one, the above-mentioned, outwards; the other, upwards (the sanitary authorities would not let us, I fear, build downwards). The objections to upward building are: slightly greater initial cost, and an alleged higher cost of lift service over train service. Others are the prejudice of the British working people (particularly of the artisan class) to any alteration in the planning or general appearance of their dwellings, or their habits. The advantages of the upward schemes are:—

(1) An enormous increase of the uncovered areas of ground. The extra land would provide recreation grounds, playing fields, public gardens (even golf courses, if done on a sufficiently large scale) beyond the most liberal allowance in any modern garden city lay-out.

(2) A very much healthier atmosphere in all the dwellings, particularly the upper stories.

(3) An economy in the lighting and heating, and to some extent in sanitary services.

(4) Considerable improvement in the general sanitary conditions (think of all the unwholesome little back yards in Battersea, the difficulty of inspecting them, and in making any amelioration if they could be inspected).

(5) An absolute control of the smoke nuisance. The saving this alone would effect in the adjoining areas would more than pay for the added expense (on rates or taxes).

The objection to smoke control in industrial premises is that while dwelling-houses are allowed to do as they like, it is useless to control industrial smoke.

I have taken an area in Battersea as a typical example, not because it is the most overcrowded but because it is about the average of many of the less fortunate boroughs, and because it is definitely bounded by railways and roads. The area is approximately 33 acres, the present number of houses 846 (all particulars are taken from Ordnance survey). There are 25 houses to the acre, two families inhabit nearly every house (and take lodgers), so the number of inhabitants is probably 250 to the acre.

Plan No. 1 (see page 76) shows graphically the proportion of houses to open spaces.

Plan No. 2 shows the same area developed in 14 blocks 22 stories high, six tenements per floor, giving a total accommodation for the area at five persons per tenement—9,240 as against 8,460 in the old—at half the number of inhabitants per tenement, and one-third the number per bedroom; besides which, it provides the very large business blocks, A and B, the rents of which would practically outset the interest on the cost of rebuilding the whole area.

Acts of Parliament would, of course, be required for the acquisition of the areas, and the County Council, who would become the owners and developers, would of course have to revise, or totally exempt the builders from, their by-laws.

The area now occupied by schools and playing fields is proportionately extended. It also provides one 125-ft. trunk road as against the present road averaging 60 ft.

The height of the buildings, if the lowest story were used for caretakers, light and heat distributing, club-rooms, private and public stores, would be 250 ft. The top floor would be used for wash-houses and laundries and (possibly) crèches, the roof being devoted to drying grounds and recreation. In every case all rooms would receive more light and air than the ground floors of houses as now existing, and the proportion would, of course, be enormously increased as the stories rise.

As to the question of cost, I understand that this class of building can be put up for something like 2s. 6d. per ft. cube as against the L.C.C. price for housing schemes of 1s. 8d. A good deal of the extra 10d. would be recovered from the business blocks, and the cost would be slightly reduced by the use of the old materials (bricks for concrete, doors, and possibly glass). The increased health of the inhabitants and the improved amenities of the district and the surrounding districts, should be compensation for the rest. There would also be some saving on the sanitary services of the district.

As to the increased cost to the inhabitants (working lifts and caretakers for cleaning public parts), this should not be more than the increased cost of railway journeys imposed on most inhabitants who are rehoused on areas generally considerably further from their work in the matter of railway or tram fares.

The buildings would be of ferro-concrete, of course absolutely non-inflammable; the heating would be by steam and hot water; lighting by electricity; and gas stoves for cooking. Rubbish would be deposited in bins automatically collected by waste lifts daily. Passenger lifts would be sufficiently large for perambulators, and a certain number of free journeys might be allowed. Domestic animals would have to be limited, but the open areas to each tenement would allow for a few. I have treated only a small area, in which the sizes of the recreation grounds must necessarily be small; with larger areas, golf courses and parks are quite a possibility. With this kind of building some of the difficulties of rehousing are easily overcome; for instance, the question of what is to become of the inhabitants while the new houses are being built is, with schemes which cover a wide area, a question of great importance. With tall buildings only a small original area need be demolished, while one block is being built; directly one block is completed, the inhabitants of enough of the original small houses can be accommodated in this to enable most of the other block sites to be cleared, the further demolitions being simply to provide the recreation grounds and open spaces.

Again, the materials—steel, gravel or breeze, and Portland cement—are all of the kind of which an abundant supply is available at a not too inflated price, and for much of the work (concrete) only labourers and foremen are required.

I have dealt with the question of cost from a matter of habit, but the time is coming when housing will be so importunate a subject that Governments may have to make cost (as in the case of unemployment pay) give way to policy.

SAME AREA RE-DEVELOPED.

EXISTING LAY-OUT,

Suggested Re-housing Scheme for part of Battersea.

By Mr. Harold Falkner.

PROSPECTS FOR CRAFTSMANSHIP

BY REGINALD HALLWARD.

IN speaking of craftsmanship at a time when subject in its varying aspects is receiving much attention, I am concerned, for my rposes here, not with the craft trades, the rk of the mason, bricklayer, or joiner, impor- t as these are, but rather with the more hly developed artistry of the individual ftsman. All true craftsmanship implies istry, and it is only when this is added that ftsmanship attains its goal. The over- phasis on craftsmanship, a reaction from the lustrial revolution, still leaves the central ue untouched, and it is only when thought and ling have brought it through to the deeper ftsmanship of art that craftsmanship can said to be enough. To deepen and extend the etry of art, to attach it more intimately to e depths of human thought and feeling, is recover its august place in the destinies of man life.

The chief concern is how to attach such nvictions to building and the allied arts, rough which a closer union may come about. r this can happen only when the same aim imates both, joined by a right outlook on e, which brings them together. For, as the ts rest on truth, so the true way of life is the ly way for art. At a time when the principal mand for architecture is made through com- erce, industrial conditions and standards verning largely what is demanded, it is an roic task for the architect to decide on what may, or may not do—unless he falls back on the phistry that someone else will do it if he frains, and makes surrender of his real pre- gatives—on this issue, and how it is decided es the future largely depend.

This is true for both architecture and applied tistry, and the way of life for them both. hough the conditions of their work are different eir relationships are no less complimentary each other, needing mutual consideration of hat is to be desired, and how executed. If either hand there is the desire to impose eir will, or adopt less than this mutual attitude, ere is loss for both. The extension of archi- cture into this enlarged field of expression an only be developed by the free service of ther minds and the additional artistry which is bestows. For architecture, as we under- tand it to-day—like patriotism—is not enough. ll great architecture has fortified itself with the enius of other men. The single mind cannot o this; has not ever done it. In Eastern archi- ecture—Greek, as at the Parthenon and else- here; Mediæval, at Amiens—wherever the est is seen, the artistry contributed in this way ollectively floods the building; architecture nds new possibilities through it, and the artis- ry of the craftsmen finds new ones through rchitecture.

A poverty of architecture existing through he absence of imaginative craftsmanship, it may e retaliated, is hardly to be found. There some truth in this, and there is also the fact f its being largely due to the difficulty of its rvival. It needs something of the heroic, nely sort of courage, for the artistry of the raftsman not to—at any rate partially— ndustrialise itself. Through this there has grown hat kind of pseudo-artistry which lies in close dherence to the architect's "office drawing." nd even where the pose of artist craftsman is erhaps rather arrogantly assumed, we see the ounting house or office taking precedence of he art—and the first-hand intimacy no longer ttaching to it. It is said we cannot promote t, and yet there is one sense in which this is uite untrue, and the way to it is to distinguish he real from the half real, and the mere hireling om the artist. The way to get it is to want enough, and the architect does not always ant it. We may do without it, but in so doing rchitecture droops; its music is indeed frozen, cking the southern zephyrs of romance and eatment in its sculptured and other details.

Though welcoming such steps as have recently een taken, I do not think the R.I.B.A. has, as body, enough familiarity yet with really rsonal craftsmanship to give much furtherance it. We must not only respect, but understand its nature, and this requires more than the admission implied in the movement that there is neglect, though it should prove a step on the way to better things. There has to be a change of outlook on both sides. The prospects for the craftsman depend on an accession of thought and feeling to vitalise form, on giving a nobler interpretation through his materials, based on vision as well as craftsmanship, and on the side of the architect, based on similar feelings, a closer co-operation and appreciation of what the artist has to give. Commerce has made it so relatively easy that I recognise the extra trouble it is to the architect for the artist in him to prevail over the employer.

Above all other methods to promote the artistry of craftsmanship by organisations, societies and movements aiming to further it, the defence of the arts rests primarily on the artist himself. We may look too much outside ourselves for help and entangle ourselves with such machinery. Institutions have as often proved a hindrance as an advantage to the artist, and their influence cannot be shown to have always promoted the best. There is no one will defend architecture if the architect does not; there is no one will defend art if the artist does not. It is this higher self-esteem which can alone now avail us, to believe that it all comes back to the individual. As the explorer, Dr. Nansen, has said: "Let me tell you one secret of such so-called successes as there may have been in my life. . . . It was to burn my boats, and demolish the bridges behind me. Then one loses no time in looking behind when one should have quite enough to do in looking ahead. . . . You have to do or die," and he continues: "It is the explorers with the true spirit of adventure we now need if humanity shall really overcome the present difficulties, and find the right course of that dangerous sea ahead of us." Never more so than to-day have the words of the great poet rung true: "Where before thee no man has trod, make for thyself a path."

In conversation with one of the Canons outside the western doors of the Cathedral of Nantes, on my noticing some defacement to the carved stonework, destroyed at the time of the Revolution, "Ah!" he said, "but if the Church cannot protect itself?" Pondering on the significance of these words, my thoughts were directed to the arts and the danger of the encroachments on all sides to capture them for industrialism, to challenge their prerogatives and replace them with economic and industrial servitude, and the words of the old Canon came back to me. I had so often listened to the doctors, of which we have so many both within and outside the arts, advising the artist to adapt himself to the times, and to learn to market his wares better, and come out of his studio more. As though the craftsman was surrounded with opportunities which he neglected. And as refrain to all this we are told that we are old-fashioned. On the other side there may be some exaggeration of a general truth in what was said by Sir Joshua Reynolds. "An artist," says Reynolds in his letter to Barry, "should bring his mind to bear on painting, from the moment he rises till he goes to bed." This concentration can only grow out of a sense that life is somehow guided, and that the response will come to such conviction because if offers something which appeals to the best in all of us. It is to strengthen production in this way rather than dependence on institutions, the publicity agent and the salesman, that will do most towards encouraging art. The words of the old Canon implied that where there is something great enough it is its own best defence and will draw all others to it.

Taste can be no substitute for inspiration, for its timid conformities leave us cold, and there is nothing into which the spirit of humanity can enter, thought and feeling so little penetrating it; a craftsmanship without a soul. Taste is, indeed, no help, when you are opposed to this greater reality. A recently dedicated chapel in a new Cathedral, one of so many instances, leaves this depressing "office" sense on our minds, so impeccable, but with its fatal intimation, whether stated or not, "designed by the architect." So a sort of flat rate for the arts has been built up, under which in what should be their noblest application they sink to this depressing level.

A great responsibility rests upon the artist who should direct his own labour instead of merely taking the colour of his own time and entangling himself too much in its machinery. Above all else, what really favours his art is his own strong convictions. I admire the solitary courage; the belief that can alone sustain the arts; the honour that compels the artist, against all obstruction and upheld by the inward necessities of his calling, to seek freedom for his expression at all costs. It is this best, of which the good is often the enemy, that we need so much to-day; the great example, the fidelity of fixed purpose, though it stand alone. For when all is said about encouraging the arts, about methods and craftsmanship, there is still the unaccounted for, which counts most of all, and of which we only know for ourselves. It is here, within this stronghold, that the arts have to re-feel and re-think themselves, to interpret life, and its deepest conceptions to-day. And for the young artist emerging from the schools into the great adventure that this foretells, his greatest ally will be found in valorous determination to be one of the ten just men on whom the future of the world depends.

THE COLLEGE OF ESTATE MANAGEMENT.

Mr. J. Leonard Crouch, barrister-at-law, delivered recently a special lecture at the College, dealing with "The Recent Developments in the Law and Practice of Surveys for Dilapidations." In the course of his remarks, the lecturer said that since the war statutory provisions had been enacted affecting the liability of landlords to repair certain classes of property. First in order of time came the Rent Restriction Acts. Under these a landlord, in certain circumstances, could not recover rent while repairs were required. The Housing Act of 1925, Section 1, provided that, despite any stipulation to the contrary, houses let at £40 a year in London and £26 elsewhere—the latter figure being an extension—were repairable by the landlord. The only test was rent. Section 2 provided that any houses suitable for occupation by persons of the working classes were also so repairable. No rental limit was laid down and the only test was suitability for the purpose named. On failure of the landlord to do the repairs, the local authorities could do them. The cost became a mortgage on the premises. The Law of Property Act, 1925, by Section 147, enacted a new condition. If the landlord served an unreasonable notice to do decorative repairs, the lessee could apply for relief. It appears that he could immediately commence proceedings. If this was so, it would appear advisable to write a letter before action, otherwise he might perhaps not get his costs, as the relief sought was discretionary. No question of damages arose, The section was apparently designed to meet abuses of the same description which section 14 of the Conveyancing Act of 1881 effectively encountered.

The foregoing acts followed the lead given by the many agricultural holdings Acts, and assisted the tenants who, from the circumstances of their cases, were considered by Parliament as not always capable of looking effectively after their own interests. Many decisions of the courts were reviewed. They mostly decided questions of mixed law and fact, and care would have to be taken to see that the facts of such precedents applied to other sets of facts, otherwise it might be found that the Courts distinguished the cases and did not consider themselves bound by their previous decision. When deciding what damages would be obtained for breaches of express or implied covenants, judges who sat without juries looked through the eyes of juries. Surveyors should do the same when advising clients. If both parties to a dispute endeavoured to do so, agreement would usually eventuate and the expense involved in litigation would be avoided.

PARTY WALLS: PRACTICE AND DECISIONS

By J. DOUGLAS SCOTT, A.R.I.B.A.

CHAPTER I.

INTRODUCTION AND HISTORY.

After the time when the early rude structures were little more than a protection from the elements and wild animals, and when men were drawn together forming communities and building villages and towns, the history of party walls reflects the progress of building through the ages down to the present time when the needs of the modern city demand the proper separation of buildings with adequate strength and security appropriate to the nature and size of the structure, and regard for the rights of the neighbouring owners of the land and the buildings thereon.

The earliest regulations relating to party walls that the author has discovered occur in an order made by the Court and Aldermen of London in 1192 requiring "all houses to be erected in London or within the liberties thereof to be built of stone with party walls of the same and covered either with slates or tiles," but this order not being sufficiently observed, it was further provided "to appease contentions that might arise among neighbours upon enclosure between land and land that twelve Aldermen of the City should be chosen in full husting and these sworn to attend the Mayor in making the proposed regulations." The dimensions of the walls were to be regulated by these magistrates and were to be at least 3 ft. in thickness and 16 ft. in height. There were also regulations for heightening the party walls by agreement between the owners or otherwise.

The earliest reference to party walls in any Act of Parliament occurs in the one passed after the great fire of London, entitled "An Act for rebuilding the City of London" (1667), wherein, amongst other provisions, regulations were laid down for the separation of buildings by party walls. The buildings were divided into four classes each with their own schedules of thicknesses of walls expressed in terms of bricks. It is interesting to note that in this Act provisions were made for settling questions of light and wages. This Act only applied to the City of London and remained in force until 1772.

An Act "for better preventing mishaps that may happen by fire," and requiring the provision of party walls to all houses within a certain area, outside the City, in London and Westminster, was passed in 1707. In 1725 the law was amended and extended to the parishes of St. Pancras, St. Marylebone, Paddington and Chelsea, and by a further Act in 1747 the thickness of party walls was increased. In 1764 it was enacted that party walls should have parapets carried up 18 in. above the roofs. A further building Act was passed in 1774 whereby buildings were divided into several classes each with their own rules, and remained in force until repealed by the Metropolitan Building Act of 1844, which was repealed by the Metropolitan Building Act of 1855, which in turn was repealed by the London Building Act of 1894.

Several amending Acts have since been passed, some as the result of legal decisions and interpretations on the 1894 Act, and some due to the advance of the science of building, but the 1894 Act remains the principal Act regulating building within the Administrative County of London, which extends over an area of 117 square miles, and contains the provisions defining the procedure for dealing with party structures. The practice in dealing with party structures in London was built up on the Metropolitan Building Act of 1855, and being found to work successfully the provisions of this Act were practically re-enacted in the Act of 1894. The procedure thereunder might well be taken as a basis for dealing with similar problems outside the area governed by this Act, indeed, architects and surveyors would, I think, welcome this procedure being made statutory for party structures throughout the country.

It may be mentioned, in passing, that the Royal Institute of British Architects in December, 1901, passed a resolution requesting the then Local Government Board to promote a Bill in Parliament enacting those provisions of the London Building Act, 1894, dealing with party walls, to apply to the United Kingdom, but unfortunately with no result.

The rights and liabilities of building and adjoining owners in respect of party structures within the Administrative County of London are regulated by Part VIII of the London Building Act, 1894, but other parts of this Act define the terms used, the methods of building and rules for construction, and deal with dangerous structures, penalties, etc. The rights of building and adjoining owners are clearly defined under this Act, and it was held under the preceding Metropolitan Building Act, 1855, in the case of the Standard Bank of British South Africa *v.* Stokes in 1879, that these rights are in substitution of those which existed at Common Law, and are not merely an addition thereto. It would appear that one of the main objects in view in framing Part VIII of the Act, was to enable owners and users of party walls to conduct negotiations and settle disputes without the intervention of lawyers, and to place all such business in the hands of surveyors.

As an architect owes a general duty as a professional man to know and act in accordance with the law so far as it affects his profession, if he designs or constructs without reference to the rights of adjoining owners he may render himself liable for negligence. In the following pages the practice relating to party structures will be considered under two headings, one dealing with that governed by the London Building Act, 1894, and the other that governed by Common Law.

CHAPTER II.

DEFINITIONS AND DECISIONS UNDER THE LONDON BUILDING ACT, 1894.

Speaking generally, under the London Building Act, 1894, the term "party wall" only takes account of user and not of primary ownership; every wall, therefore, which separates two buildings is a party wall under the Act, no matter who built it or how it is situated in reference to the boundary of the property. Whatever rights may exist at law as to the ownership of the wall, or however clear it may be that one of the parties is the owner of all of it, it is a party wall if jointly used by both parties as a separation between their respective buildings. Even if one party can prove that the wall stands wholly on his own land, he is not entitled to interfere with it without the sanction of his neighbour who may only have established a right of user by having built against or up to the wall without permission. The term "party structure" includes not only walls but partitions and floors that are used as a means of separation, and the procedure laid down under the 1894 Act applies to everything of the sort in which joint user can be established.

The definition of a party wall under the Act, section 5 (16), would appear to be limited by section 58 to such part of its length as it is so used, but as the later definition is found under Part VI (Construction of Buildings) it must be assumed that it is intended to apply only to this part of the Act regulating the construction of a party wall. In the action Williams *v.* Bull (1890), under the preceding Act, it was held that a wall occupied for part only of its height by buildings on both sides of it, and above that height by a building on one side only, is a party wall for the whole of its height. In the later case of London, Gloucestershire and North Hants Dairy Co. *v.* Morley and Lanceley (1911), it was held that it was possible to have a wall that was as to part of its height a party wall and as to part of its height not.

These decisions appear contradictory, but are not really so. In the first case, the wall was built as a party wall, as defined by Act, and for the purpose of determining rights and liabilities thereunder, was held be a party wall for the whole of its heig although the upper part did not separate buildings. The owner of the lower build could have exercised his rights by using upper part if he desired to raise his build upon complying with the provisions of Act. The owner of the higher buildi although the party wall became the exter flank wall of his building, above the adj ing lower building, could not do any w thereto without complying equally with provisions of the Act. In the second case wall was not built as a party wall, but user had become one to the extent so us and above that height remained an exter wall, and the owner of the lower build built against it had no rights in the w beyond those which he had acquired by us

The decision in the case of Drury *v.* Ar and Navy Auxiliary Co., Ltd. (1896), un section 75, comes under a somewhat differ category. In this case, a building of warehouse class had one portion five sto in height, divided from the other portion story in height, but communicating by opening on the lower story fitted with i doors. Here the question was whether wall dividing the two portions was a pa wall for its entire height or whether the up portion of the wall above the one-story bu ing was an external wall in which wind openings could be constructed. The Divisio Court upheld the Magistrate's decision t "party wall" in section 75 only meant t a wall was a party wall as far as it was u as a separation between two buildings, but was not a party wall where it ceased to div the two buildings.

The provisions relating to the cubical ext of buildings, section 75, consent to lar dimensions of buildings, section 76, and r as to uniting buildings, section 77 of the 1 Act, have been repealed by the London Cou Council (General Powers) Act, 1908, wh under Part III fresh regulations dealing w these matters are enacted and the te "division walls" substituted for "pa walls" used in the 1894 Act, whilst retain the provisions of that Act as regards constr tion.

The legal decisions regarding the ter of party wall notices appear to be contrary the general practice of architects, but, n withstanding these decisions, I am of opin that the safest course is to quote the app priate clauses of section 88 and to attach plan and section of the wall to the notice.

In this connection the Court of Appeal the case of Hobbs, Hart & Co. *v.* Gro (1898) held that a party wall notice ought be so clear and intelligible that the adjoin owner may be able to see whether he ought serve a counter notice; a notice that was pr tically a verbatim copy of section 88 v insufficient as wanting in details of the wo actually proposed. Again, in the case Spiers & Son, Ltd. *v.* Troup (1915) it v decided, amongst other points, that a pa wall notice stating that the building ow proposed "to pull down and rebuild such pa wall, if on survey it be found so far defect or out of repair as to make such operation sirable, and to perform all other necess works incidental thereto" was insufficient being vague and hypothetical.

No party wall notice is required to be gi to an adjoining owner by a person pull down his house, unless it forms part of party structure; a bressummer let into a pa structure does not form part of it. This cision in the case of Major *v.* Park Lane (1866) was under the corresponding sect of the 1855 Act. No party wall notice necessary for taking down and rebuilding party wall condemned as a dangerous str ture, but, as a notice provides the means setting in operation the provisions of the A regulating the rights and liabilities of t respective owners, it will usually be fou better to serve such a notice, which w enable the proceedings which follow to

regularised and defined and keep the matter in the hands of surveyors.

In the case of Spiers & Son, Ltd. *v.* Troup (1915), previously referred to, the three surveyors were duly appointed, but delay occurred in settling the award and the wall was condemned as a dangerous structure before the award was made. The building owners were suing the adjoining owner for his share of the expense of taking down and rebuilding the party wall, and it was held that both the building and adjoining owners were liable for the expenses of pulling down, but inasmuch as the building owners had not complied with the provisions of Part III of the Act, their claim for contribution towards rebuilding failed.

Unless the work, to which a party wall notice relates, is begun within six months after the date of its service upon the adjoining owner, the notice becomes invalid and a further notice must be served; but the Court of Appeal, in the case of Leadbitter *v.* Marylebone Borough Council (1904), held that this limitation does not apply when a difference has arisen and the matters in dispute have been referred to the surveyors, who do not make their award within six months after the service of the notice.

The right of making good a party structure that is defective and out of repair was held by the decision of the House of Lords, in the case of Barry *v.* Minturn (1913), to be confined to making good the party structure so that it becomes effective for the purpose for which it is actually used or intended to be used. This case originated in an appeal from the award of the surveyors, where the building owner, in extending her building, had made use of the party fence wall dividing the gardens as one of the walls of her building and proposed to remedy dampness found to exist therein by making good from the adjoining owner's side; but this she was not allowed to do, as it was held that the work could be effectively performed from her own side. It was decided that dampness in a wall is a defect within the meaning of the Act only when it renders the wall less effective for the purpose for which it is used or is intended to be used: it is not a defect in a wall dividing two gardens. It was also decided that in determining the proper method of making good a defect the three surveyors are to have regard to the convenience of the adjoining owner.

The obligation to make good all damage occasioned requires the restoration of all things to the condition in which they were previous to the commencement of the work, not only as regards damage to the structure itself but also as regards damage to the adjoining rights of light (Crofts *v.* Haldane, 1867). Section 101 of the 1894 Act enacts the law as laid down by this decision.

The Court of Appeal decided that the surveyors appointed under section 91 to settle the difference between the building and adjoining owners arising out of the proposed raising of a party wall have no jurisdiction to award compensation to the adjoining owner for loss of trade by reason of the execution of the work (Adams *v.* Marylebone Borough Council, 1907). There appears to be no decided case under section 93 (3), where the building owner is liable to compensate the adjoining owner and occupier for any inconvenience, loss or damage that may result from underpinning the adjoining owner's building, and under this section it is assumed that loss of trade may be taken into account.

Reinstatement after fire, when more than half the area of a party wall, not conforming to the Act, is destroyed or so damaged that more than half the area has to be taken down often raises difficulties. In rebuilding such a party wall the provisions of the Act have to be observed as for a new building. In the case of old party walls that do not comply with the Schedules as to materials or thickness, the question will arise as to the liability for extra cost of the work involved in rebuilding in accordance with the Act, and how any extra thickness is to be disposed on the lands of the two owners. Under their usual fire policies the insurance companies only undertake to make good or reinstate as formerly, but if an architect had been consulted as to the insurance he would no doubt have advised his client on this contingent liability and safeguarded his interests by seeing that a clause was inserted in the policy for reinstating in accordance with the Building Acts in force. The question of disposing of any extra thickness required by a new party wall on the lands of the two adjoining owners is a matter for adjustment by the surveyors concerned.

In the case of Crow *v.* Redhouse (1895), where premises were partly destroyed by fire and were taken down for more than one half the cubical extent, but the party wall, which did not conform to the Act, was not taken down or destroyed to the extent of one half the superficial area and was rebuilt as formerly existing, the district surveyor sought to have this party wall made to conform to the Act in reinstating the premises. The magistrate decided against the district surveyor under section 208; the Divisional Court, on appeal, upheld this decision, which was also upheld by the Appeal Court.

In the case of White *v.* Hepworth (1895), where one owner had pulled down his house which was separated from the other by a wooden partition and it was alleged that rain had in consequence entered and caused damage to the adjoining owner's premises and property, it was held that the mere fact that part of the outer wall was now exposed to the weather instead of being the defendant's inner wall could not give the plaintiff any cause of action. This action was for damages for loss of lateral support, which failed; but the above-quoted part of the judgment seems contrary to section 90 (2).

An injunction will be granted to restrain the building owner proceeding with work to a party wall until the surveyors have made their award.

The Court of Appeal, in the case of Leadbitter *v.* Marylebone Borough Council (1904), held that the surveyors had acted *ultra vires* in providing in their award, that the adjoining owners should be entitled to raise the party wall that had been rebuilt, at any time they might think fit, without notice to the free holders of the lessee, who were the original building owners. Where the original owner had assigned his interest in the premises to another before the adjoining owner made greater use of the party wall that the original owner had raised, it was held that the adjoining owner must pay his contribution for greater user to the assignee, and not to the original building owner, who had parted with his interest in the premises (Mason *v.* Fulham Borough Council, 1910). The lessors of the sub-lease were the persons entitled to be recouped for greater user of a party wall by an adjoining owner (*re* Stone and Hastie, 1903). An adjoining owner has no right to use a neighbour's external wall as a party wall and can be restrained by injunction (Fred Betts, Ltd. *v.* Pickford's, Ltd., 1906).

Certain works had been done at different periods to a wall, held to be a party wall, and further work was contemplated and an award made concerning this work, when the premises were destroyed by fire, disclosing conditions not previously known, whereupon the adjoining owners appealed from the award. The County Court judge found that the wall was originally an external wall and had become by user a party wall up to the height previously enjoyed, but above this height it was still an external wall and the building owners were not entitled to do the work proposed. On appeal to the Divisional Court it was held that the building owners were not entitled to acquire a greater interest in the wall than they had already acquired by user (London, Gloucestershire and Northants Dairy Co. *v.* Morley and Lanceley, 1911).

Where the work to a party wall had not been carried out in accordance with the terms of the award, an application was made for the attachment of the offending party (A.B.C. *v.* Shepperd, 1896).

In the case of small houses erected in blocks of not more than eight houses, the L.C.C. will, on application, sanction the omission of party walls above the roofs; they must, however, be carried up to the underside of the slating or tiling. Most of the local authorities will also consent to this omission, but usually confine the number to six houses.

BIRMINGHAM ARCHITECTURAL ASSOCIATION

THE fifth general meeting of the session was held in the Association's rooms in Newstreet on the 7th inst. (the President, Mr. Holland W. Hobbiss, A.R.I.B.A., in the chair), when Mr. H. P. G. Maule, D.S.O., M.C., F.R.I.B.A., gave "Some Notes on Buildings for Research Work," plentifully illustrated by plans and photographs of buildings of such a nature, already carried out. The lecturer began by saying that although the call for domestic buildings was still insistent, a great problem was added in the demand for buildings for the work of research. The future was bound up in research work, and our world-wide Empire looked to and depended upon our efforts and accomplishments. Modern research in all its branches received a great impetus during the late war and had continued to make great strides since.

New problems arose and fresh theories came about almost daily, so that the architect must needs be very much alive to cope with the altering conditions and demands, which might even take place while his building was in course of erection; but some general essentials remained the same throughout, *i.e.*, good natural light in the laboratories, with as few and as narrow piers as possible; great care for sanitation, with all fittings, sinks and carrying channels open, running inside the building until finally discharging down an earthenware pipe; the elimination, as far as possible, of dust and damp—the greatest enemies of research work; and ample ventilation and heating.

The lecturer pointed out that the work of research was chiefly divided into three classes—Pathological, Agricultural, Trade and Commerce—each requiring totally different buildings. It was shown and explained to what lengths, in special planning and arrangements, efforts against infection of animals and birds had gone to in attempting to minimise this danger. Although modern research was only in its infancy and its demands were so continually changing, the lecturer did not advise buildings of a wholly temporary nature, because in instances in which buildings of such a character had been attempted they had been found unsuitable, especially in the pathological section, where rigidity, stability, dustlessness, quiet, vermin-proofness and the fixing of temperatures were essential to successful experiments.

As a wall or roof material, ferro-concrete was not advised. But buildings should be so designed as to be easily capable of expansion or contraction in units, both laterally and vertically. Stress was laid upon the provision for adequate recreation, both indoors and out, if those so closely engaged on their work and experiments and working together in teams, as it were, were to produce satisfactory results. Generally speaking, the designing of buildings for research work was new to architects (and often even the technical staff were not at all sure of their requirements), but the lecturer urged that architects should make it their business to fit themselves to cope with the demand which must grow by leaps and bounds in the near future, or yet another phase of building would drift into the hands of the "trade specialists."

An interesting discussion followed, and a hearty vote of thanks was accorded to the lecturer.

Preserving Cissbury Ring.

Worthing Council have decided that Cissbury Ring, the prehistoric earthwork, shall remain in its natural grandeur, unmarred by any modern addition. The council unanimously declined a request for permission to place a memorial seat, of approved design, on the Ring.

THE LONDON BUILDING ACTS AND THEIR APPLICATION.—I.

BY H. V. MILNES EMERSON, A.R.I.B.A.

THE oldest building law on record and one still in force is to be found in the Bible in the fifth Book of Moses, called Deuteronomy, chapter xxii, verse 8, which reads as follows:—"When thou buildest a new house, then thou shalt make a battlement for thy roof, that thou bring not blood upon thine house, if any man fall from thence."

Prior to the Great Fire of London, 1666, buildings were erected practically without any restrictions regarding materials used. In 1667 was passed "An Act for rebuilding the City of London," and under that Act the Lord Mayor, Aldermen and Common Council of the City of London were called upon to appoint "one or more discreet and intelligent person or persons in the Art of Building to be the Surveyors or Supervisors to see the said rules and scantlings well and truly observed." The District Surveyors of the present day are the official descendants of the surveyors or supervisors appointed under that Act. This Act also provided for the separation of buildings by party walls, the omission of which in the houses erected previous to this Act had enabled the Great Fire to destroy a full square mile of the City of London. Under the Act 6 Anne, party walls were required to all houses in London and Westminster. This Act was amended the next year, 7 Anne, and this Statute also enacted that in London after June 1, 1709, no door frame or window frame of wood to be fixed in any house or building within the Cities of London, &c., shall be set nearer to the outside face of the wall than 4 in. Previously to this, as was also the case in the country, reveals had only about 2 in.; or the window frame was even flush with the outside face of the wall. The idea of setting the frame back 4 in. or more from the face of the wall was to prevent the passage of fire from one window to another. In 1764 (Geo. III) it was enacted that master builders were to have the building when roofed in surveyed by one or more surveyors, who were required to take oath before the Justice of the Peace that the building had been erected in accordance with the Act. Further Acts were passed in 1764, 1766 and 1772, relating to party walls and streets; in 1774 (Geo. III) providing for the establishment of District Surveyors outside the City of London. The Lord Mayor and Aldermen in the City of London and Justices of Peace in their respective General Quarter Sessions were required to appoint the "Surveyors or Supervisors," who had to take oath to observe and enforce the Act. This Act remained in force until the introduction of the Metropolitan Building Act (1844). Under this Act the Surveyors or Supervisors received the existing title of District Surveyor. The method of appointment remained the same, but he had to be qualified by examination. Under the Metropolitan Act of 1855 the Royal Institute of British Architects was appointed as the examining body. This body still conducts the examinations, but the appointment of District Surveyors is now made by the London County Council, under the London Building Act, 1894. Although the appointments are made by the L.C.C., it has been decided that "District Surveyors are persons having a statutory position and duty cast upon them; they are not mere servants of the London County Council."

In 1894 the London Building Act was passed and came into operation on January 1, 1895, and with additions and amendments at later dates is the London Building Act in force at the present time.

The preamble of the new Act, after reciting the titles of the existing Acts, states, "And whereas the existing provisions of the said Acts are complicated and in some respects doubtful, and are insufficient to secure the construction and maintenance of streets and buildings in a satisfactory manner," and "further provisions should be made and powers conferred in order to secure a proper width and direction of streets' the sound construction of buildings, the diminution of the danger arising from fire, the securing of more light, air, and space around buildings, and generally with respect to the control and regulation of streets and buildings."

The object of the Act of 1894 was to do away with the existing Acts of the previous 50 years, which had become complicated, doubtful and insufficient and to replace them with a new Act with clearness and simplicity of construction, wording and definition. That Act is now over 30 years old, and with the additions and amendments to the original Act, supplemented with sundry Acts dealing with buildings, town planning, &c., it has receded from the supposed sweet simplicity of the London Building Act, 1894.

The following Acts were partly repealed:—

The Metropolis Management Act, 1855.

The Metropolis Management Amendment Act, 1862.

The Metropolis Management and Building Acts Amendment Act, 1878.

The London County Council (General Powers) Act, 1890.

The London County Council (General Powers) Act, 1893.

SECTION 4 of the Act states: "This Act shall, save so far as is otherwise provided, extend to London and no further." The map published in the New Year Number of *The Builder*, on January 14, will show the extent of the districts included in this Act and the names of the District Surveyors.

SECTION 5 (Definitions).—In this Act, unless the context otherwise requires—

(1) The expression "street" means and includes any highway and any road, bridge, lane, mews, footway, square, court, alley, passage, whether a thoroughfare or not; and a part of any such highway, road, bridge, lane, mews, footway, square, court, alley, or passage.

(2) The expression "way" includes any public road-way or footpath not being a street and any private road-way or footpath which it is proposed to convert into a highway or to form, lay out, or adapt as a street.

(3) The expression "roadway" in relation to any street or way means and includes the whole space open for traffic whether carriage traffic and foot traffic or foot traffic only.

(4) The term "centre of the roadway" means—

(*a*) In relation to any street or way of which the centre of the roadway has been ascertained or defined by the Council or the superintending architect previously to or after the commencement of this Act the centre of the roadway as so ascertained or defined;

(*b*) In relation to any street or way of which the centre of the roadway shall not have been ascertained or defined by the Council or the superintending architect where the roadway opposite the site of the building in question shall since the twenty-second day of July, one thousand eight hundred and seventy-eight, have been widened the centre of the roadway as existing immediately before the date of such widening or where it shall not have been so widened the actual centre of the existing roadway.

For the purpose of any enactment in this Act referring to the centre of the roadway the superintending architect may at any time define the line constituting the centre of the roadway in the case of a street formed or laid out after the eighteenth day of August, one thousand eight hundred and ninety, and the line defined shall continue to be deemed the centre for such purpose, notwithstanding that the actual centre of the roadway may have become altered by reason of the roadway having been widened either on one side only or on both sides to an unequal extent.

(5) The expression "the prescribed distance" means 20 ft. from the centre of the roadway where such roadway is used for the purpose of carriage traffic and 10 ft. from the centre of the roadway where such roadway is used for the purposes of foot traffic only.

Note.—The Council may, in certain cases, extend this distance as set forth in Section 13.

(6) The expression "new building" means and includes—

Any building erected after the commencement of this Act; any building which has been taken down for more than one-half of its cubical extent and re-erected or commenced to be re-erected wholly or partially on the same site after the commencement of this Act; any space between walls and building which is roofed or commenced to be roofed after the commencement of this Act.

Note.—No definition of "building" appears in the Act, this having been struck out in Committee of the House of Lords.

The second paragraph of this subsection being merely a definition and not an enacting section, it was held that where a building had been partially burnt and had been taken down for more than half of its cubical extent, but the party wall between it and the adjoining building had been taken down to the extent of less than one-half thereof and the part taken down re-erected, the remaining portion of the party wall need not be made to conform with the provisions of the present Act, because Section 5 (*b*) is merely a definition section, and sufficient of the party wall had not been taken down to bring it within Section 208.

Lord Coleridge, C.J. (James *v.* Wyville), stated: "The question whether a building is a new building or not has been decided over and over again to be a question of fact; it is a question of degree. A building nearly all taken away and rebuilt would be a new building, but the small addition of, say, a door would not make the building a new building. Between these extreme cases there may be thousands of cases, and it must be left to the discretion of each judge to decide for himself what is a new building."

DISCOVERIES AT UR.

AN interesting report upon the excavations at Ur in Irak since their resumption on October 28 by the joint expedition of the British Museum and the Pennsylvanian University Museum has been issued by the authorities of the former institution.

Work has been proceeding upon a lofty mound just outside the wall built by Nebuchadnezzar round the sacred area. In an area some 70 yds. by 50, several blocks of houses belonging to about the period of Abraham, 2100 to 1900 B.C., have been found. Twenty feet down in the mound, with their walls astonishingly well preserved, the fronts of the houses were of burnt brick, only the interior walls being of mud brick over burnt brick. The foundations rise 3 ft. or so above the level of the brick-paved floor.

The houses had been swept bare of nearly all their contents, and even the graves of their occupiers beneath them had generally been plundered, yielding little except clay pots and sometimes the signet seal of the householders. But the ruins were productive in one respect, perhaps the most important being that large numbers of inscribed tablets were found lying along the foot of the brick shelf in the repository, where they had been kept or flung out together as rubbish in some period of destruction. From the few it has been possible to examine it is clear that a most important and interesting series of documents has been secured. Among the art objects found are a small figure of a lion in alabaster, a head of a ram, probably from a ceremonial staff, and a bottle of blue and black moulded glass.

GENERAL NEWS

Professional Announcement.

Mr. Harry Hutt, F.R.I.B.A., has taken Mr. E. Steward Smith, A.R.I.B.A., into partnership. Mr. Steward Smith, who is the younger son of the late Mr. Charles Steward Smith, J.P., F.R.I.B.A., becomes the third generation to be associated with this firm.

Proposed Doncaster to Trent Ship Canal.

The committee appointed to consider the scheme for a Doncaster to Trent ship canal, which was proposed by the Federation of British Industries, at an estimated cost of £11,000,000, met at Doncaster on Friday last, and selected two engineers, of whom one will prepare a scheme. The committee's proposals will be placed before the Royal Commission on Doncaster Coalfield Drainage in March. Important colliery interests are behind the scheme.

St. Mary-le-Bow.

It is understood that extensive repairs are required by the Church of St. Mary-le-Bow, whose spire is one of Wren's finest efforts. The bell-tower, housing the famous "Bow Bells," is in great need of repair, while the big 53-cwt. tenor bell itself is cracked and its bearings are said to be in a precarious condition. The organ, too, is in need of repair and much work is required by way of redecoration to the interior. The sum required for the complete reconditioning of church and bells is £10,000.

Byzantine Carving in Green Porphyry.

The Victoria and Albert Museum has just acquired from the Abbey of Heiligenkreuz, in Austria, a circular relief in the rare green porphyry quarried near Sparta, representing the Virgin in prayer, which is of the highest importance for the history of art. Apart from its great beauty, it is almost the only Byzantine carving in any material that can be dated with complete certainty; round the edge is an inscription in Greek invoking the help of the Mother of God for Nicephorus Botaniates, Emperor at Constantinople from 1078 to 1081 A.D.

The New Lock at Sunbury.

Lord Desborough presided recently at a meeting of the Thames Conservancy Board, when the Works Committee recommended that a programme of work, submitted by the engineer, at an estimated cost of £96,343, should be approved.

In his review of the past year, the Chairman said that the new lock at Sunbury had been practically completed and would be shortly opened to traffic. This lock would be 205.6 ft. long and 25 ft. wide, and would have a depth on the sills of 8 ft. The old lock, which was 154.6 ft. long, 19 ft. 11 in. wide, and 7 ft. 3 in. deep, would be repaired and retained in use, and would greatly facilitate traffic. Six other locks had been under repair.

Tudor Architecture in Old Barking.

Further evidence of the number of Tudor buildings in the old town of Barking is afforded by the alterations which are being effected in the centre of the town to make room for the improvement of the main thoroughfares. The premises at which alterations are now being made were undoubtedly built in the Tudor period. The walls are mostly of oak framing, and in the cellar the brickwork is composed of thin Tudor bricks. Several pointed arched niches in the walls were found and also a four-centred Tudor arch in one of the division walls. Two very plain stone Tudor mantelpieces were found walled up, but they were unfortunately broken to pieces in pulling down. An interesting feature is that some of the plaster ceilings have been found to be formed with reeds instead of the ordinary wood lathing.

The Northern Polytechnic: School of Decoration.

We learn that the authorities of the Northern Polytechnic, Holloway-road, London, N.7, have decided to run special classes in the School of Decoration for students over the age of thirty. The syllabus will be modelled on that issued by the National Painters' and Decorators' Joint Education Committee. The School reopened after the Christmas vacation on Monday, January 10. Mr. Eaton is in charge of the School of Decoration. In September last a special class for the purpose of the study of Interior Decoration, Period Styles, &c., was commenced, and a specialist teacher appointed. The class has been so successful that it has been decided to extend the work. The class is held on Wednesdays, Thursdays, and such other nights as are found necessary.

Stratford Town Planning.

The site plan for the new Stratford Memorial Theatre discloses the fact that the rebuilding is to be combined with a Stratford-on-Avon town-planning scheme of national importance. By agreement between the Corporation of Stratford-upon-Avon, the Great Western Railway, and the Governors of the Shakespeare Memorial Theatre, a block of unsightly buildings now standing between the Bankcroft Gardens and the approach to Clopton Bridge is to be swept away. The area thus secured will provide an extension of the Bankcroft Gardens. It provides also approaches to a new bridge which will span the Avon at this point, diverging from the historical fifteenth-century Clopton Bridge and preserving the latter intact for the delight of future generations. Having in this way settled the future of old Clopton Bridge and secured not only an enlargement of its public gardens but a new bridge to carry the London traffic, the Corporation of Stratford-upon-Avon has been able to cede to the Governors of the Shakespeare Memorial Theatre a portion of the Gardens adjoining the old theatre site.

Thus the new Shakespeare Memorial Theatre will occupy a larger and better site, with a picturesque approach across an old canal basin through the public gardens. Time will be allowed for a thorough study of this picturesque site by architects and for the submission of plans and designs which, it is believed, will ensure the erection of a theatre worthy of Shakespeare. The estimated cost of the new theatre is £100,000. Towards this the Governors have now a sum of £50,000 in hand. Particulars of this competition are given in the next column.

COMPETITION NEWS

Students' Union, Glasgow.

Architects in practice in Glasgow are invited to submit designs for a proposed Students' Union to be erected in University-avenue, Glasgow. Mr. James Kennedy Hunter, F.R.I.B.A., is the assessor. Applications for conditions of competition should be made to Mr. Robert Brough, Hon. Secretary, Student Welfare Scheme, the University, not later than January 26.

University Buildings, Western Australia.

The University of Western Australia is inviting competitive designs for buildings to cost £150,000, including great hall, offices, &c. Premiums of £300, £200 and £100 are offered. Conditions, which will be similar to those of the Federal Council of Australian Institutes, will be obtainable by the end of January from the Agent-General for Western Australia, "Savoy House," 115–116, Strand, London, W.C.2, or the Australian Trade Commission, 44, Whitehall-street, New York City, U.S.A. The competition will close on August 23, 1927.

Shakespeare National Memorial Theatre, Stratford-upon-Avon.

The Governors of this theatre invite architects to submit designs for the Shakespeare National Memorial Theatre, Stratford-upon-Avon. The competition will be open to architects of the British Isles and America. It will be in two sections—a preliminary competition for sketch designs only, from which six designs will be selected by the assessors; each of the selected competitors will be paid £100 premium towards the cost of preparing a further more detailed design, which will form the second half of the competition. The selected architect will be paid in accordance with the schedule of charges sanctioned by the R.I.B.A. Conditions of competition, with site plan, &c., can be obtained from the Secretary, Shakespeare Memorial Theatre, Stratford-upon-Avon, on payment of a deposit of £1 1s. (which will be refunded should the conditions be returned within one month). Preliminary designs must be delivered to Stratford-upon-Avon not later than June 15, 1927. The competition will be judged by Mr. Robert Atkinson, F.R.I.B.A., Director of Education, Architectural Association Schools of Architecture; Mr. E. Guy Dawber, P.R.I.B.A.; and Mr. Cass Gilbert, Past President of the American Institute of Architects.

Manchester Town Hall Extension.

We learn that there are sixty-four entries for this competition. Messrs. Robert Atkinson, Ralph Knott, and Thomas R. Milburn are the assessors.

[There are no changes this week in the Competition Table, which is accordingly withheld.]

New Station at Ramsgate, for the Southern Railway. (*See also p. 87.*)

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

Rural Industries Bureau.

SIR,—I shall be glad if I may be enabled to thank you in your columns for the admirable leading article on rural industries in your issue of December 31. I should like further to offer one or two comments thereon.

In the matter of hand-wrought ironwork, nothing can be more pleasing than your uncompromising denunciation of the word "decorative." A horseshoe, rightly made (and the Bureau can amply endorse, through many blacksmiths, the superiority of the hand-made horseshoe over the mass-produced one), is decorative, because it well becomes the horse's hoof; but it is not so described. On the other hand, an "arty" pair of fire-dogs (perhaps with horrid deadly spikes of inconsequent foliage as ornamentation—we have had such submitted to us) is not decorative, though it is so-called. The blacksmith who has lost his tradition is generally apt to think that the making of domestic or architectural ironwork implies a clever torturing of his material. The Bureau puts forward for his temporary benefit the designs to which you refer, not, I am anxious to state, because it conceives that "design" is a mystery which may thus with any ultimate propriety be separated from "doing"—it most emphatically does not—but because it appears necessary to show at first by example the kind of thing that should be done. What promises, however, to be of much greater educative value is the organisation of escorted visits of blacksmiths to museums where fine work is exhibited. They learn more and are more convinced in five minutes by seeing what their forerunners in the craft actually did than by spending hours over dull, formulated blue prints provided for them by people who, they perhaps suspect (and perhaps rightly), have never hammered iron in their lives.

May I add that the Bureau has on its register in many of the counties, already doing good work, quite sufficient blacksmiths to make it felt that there are not as yet sufficient architects and builders giving them orders? At a recent county conference the county architect doubted the ability of the smith to produce work for public authorities at anything like the price of the factory-made article; and it may be that this is at the root of what seems to be a certain hesitancy. The reply given at the conference in question was that the rural smith who makes intelligent use of the modern equipment (such as the much advocated acetylene welding) which the country Co-operative Societies are making available to him, and who has the ever increasing advantage of almost negligible overhead charges in the shape of rent, rates, and general cost of living, actually can compete. His product, if properly costed, will almost certainly be higher in price than the factory-made article; but it will frequently be not so much higher but that its obviously finer quality and beauty will make it appear the cheaper. The Bureau is at all times ready and anxious to put prospective users of hand-wrought ironwork into touch with the nearest reliable smiths who can provide it.

The County Rural Industries Co-operative Societies (or Guilds of Rural Craftsmen), above referred to, are being set up by most of the counties as the latter begin to organise Rural Community Councils with Rural Industries Committees. There are now such societies, already working, forming, or projected in Sussex, Hampshire, Somerset, Gloucestershire, Leicestershire, Nottinghamshire, Cambridgeshire, and Derbyshire, besides the original ones of Oxfordshire and Kent.

I have already written at such length that I dare not go on to comment on the position of the rural saddler further than to say that a recent conference held in Kent may lead us to hope that it is not, after all, inevitable that he should degenerate from the craftsman into the mere salesman. The difficulty, it must be said, is less to suggest new lines than to induce the elderly men of the trade to try them. They had rather die out as saddlers than develop into leather workers of some different order.

In conclusion, it is very true that the Bureau is, as you state, but one organisation of several now at work "on different aspects of what is really one and the same problem, reacting on each other." The trouble is that the national mind is not made up on that problem. Have we really any mandate to work for "joy in industry"—with all that it implies—to encourage small industries against big; in a word, to reverse the whole national economic running of more than a century by ruralising instead of urbanising? Are we not just trying to have our sentimental cake while we are going on commercially eating it? We cannot, nationally, really mean effective business in this matter so long as we allow the prime rural industry of all—agriculture—to remain what it is; a sweating earthen pot among the brazen vessels of up-to-date industrialism. Geniuses as we are for compromise, I think the signs of the times may be pointing us to an ultimately defined and deliberate economic development of the country into garden city units, each with its manufacturing area and its rural belt; as a solution of the problem of economic rural electricity supply alone this may be necessitated.

W. W. BLAIR FISH,
Director.

Consistent Cast-iron Design.

SIR,—The grand staircase balustrade of Howick House, Lesbury, Northumberland, instanced by Mr. G. Reavell in last Friday's issue, scarcely bears upon my precise question as to the composite employment of cast-iron as a substitute in the minor equipments of wrought iron design, as exemplified by Sir John Soane's railings round his tomb to de Loutherbourg at Chiswick. The hand-chased polished brass decoration at Earl Grey's mansion dominated the entire scheme, the simple wrought-iron framing merely serving structural purposes. The little attached roses cast in brass, which induced my query, needed no chasing and might quite well have been made in cast-iron. In the beautiful railings at Chesterfield House, Mayfair, similar roses set between the uprights, within circular rings, like other parts of that masterpiece, are of fine smith's craftsmanship.

MAURICE B. ADAMS.

Ancient Surveying Instruments.

In the course of a lecture read to the Royal Geographical Society on this subject, Colonel Sir Henry Lyons said that a unit of length derived from a part of the human body, such as the forearm or foot, determined the length of the rod or cord with which pieces of land could be measured in early times. It was not surprising that but few of those simple instruments had survived, for they were easily prepared and replaced when worn out or lost, and so were of little value. Not only were the Egyptians of early times competent to measure lands and lay out large buildings, but they had attained a very satisfactory accuracy in levelling. Proof of this was furnished by the Great Pyramid at Giza. The rock pavement on which the Pyramid was built was carefully levelled before the construction of the Pyramid was begun, and levelling recently carried out by the Survey of Egypt showed it was very successfully done. Land surveying was regularly practised at all periods of ancient Egypt.

Long Crendon Manor, near Thame, Bucks.

MR. PHILIP TILDEN, Architect.

GLAZED SCULPTURE.

MR. J. ALAN SLATER, M.A., F.R.I.B.A. (President), occupied the chair at a general meeting of the Architectural Association, held at 35, Bedford-square, W.C.1, on Monday evening.

After the minutes of the preceding meeting had been confirmed, votes of condolence were passed to the relatives of the late H. W. Collins, W. E. Davis, and L. A. Shuffrey. Votes of condolence were also passed to the Art Workers' Guild on the death of Mr. John Leighton (Master), and to the Association of Architects, Surveyors and Technical Assistants on the death of the President, Mr. E. Fiander Etchells.

Mr. F. A. Waterhouse, Mr. L. F. Browne, Miss V. M. de B. Barnewall, and Miss W. M. Blackett were unanimously elected members.

The Honorary Treasurer submitted the accounts for the past year, which showed that the usual allocation to the reduction of the debentures had been increased from £500 to £900.

MR. HAROLD STABLER then gave an address, illustrated with lantern slides, on glazed sculpture, or the application of pottery to architecture. By glazed sculpture he meant the bigger or architectural work, and not the small glazed figures of which great numbers had been produced during the past fifteen or twenty years on the Continent, and to a limited extent in this country.

In briefly reviewing the work of the past, the lecturer said he would make one great omission in leaving out the work of the Della Robbia's and their school, because they would all be familiar with that work, and, moreover, it would need an evening to itself. The history of glazing started over 400 years ago. Frit beads and glazed objects—amulets and so on—had been found in Babylonia dating back to before 2000 B.C. Glazing was known in Egypt at an early date, and it was more than likely that Mesopotamian and Egyptian glazing had a common origin. It was, he believed, thought that glass was first made near the River Belus, in Syria, where a sand particularly suitable for the purpose existed. Having got as far as making glass, it would seem a natural development to apply a modification of the process to glazing bricks. So, as might be expected, it was the great brick-building nations of Western Asia who first applied glaze to architecture.

About 2000 B.C. the Assyrians protected the painted surfaces of bricks or slabs of clay with glaze, which was "slipped" and painted; "slip" was the fine clay used for surfacing glazed objects. This was probably one of the earliest forms of underglaze painting; the glaze was very slight, and used internally. Then followed geometric patterns painted on pots and treated in the same way. The Assyrians used chiefly stone for the buildings, as stone was more easily accessible to them. For the decoration of the buildings they carved great bas-reliefs in a kind of alabaster, illustrating their various triumphs and activities. These reliefs were coloured, like most early architectural decoration, and were the forerunners of Babylonian glazed brickwork.

The Babylonians, not having stone at hand, naturally used clay for most of their building. The Ishtar Gate at Babylon, the work of one of the greatest builders in history—Nebuchadnezzar—was glazed. This gate formed a stupendous and magnificent entrance to the great processional way that led to the Temple of the god Marduk, and the way was worthy of the gate, if one might judge by the size of the stones with which it was paved; these measured over 3 ft. by 3 ft. by 1 ft. thick. Leading to the gate were high and massive defensive walls guarding the approach, 180 yds. long by 22 ft. thick. These walls were decorated with lions and enamelled in bright colours. Some of the lions were white with yellow manes, others were yellow with red manes; the ground on which they were placed was light or dark blue. Black and white lines in flat enamel with rosettes formed two long frescoes 550 ft. long. Altogether there were 120 lions—60 on each side. The lions and other decoration were formed on the individual bricks, which were moulded and then marked before they were fired in order that the bricklayers would have no difficulty in placing them to form the decoration.

The decorations of the Ishtar Gate consisted of bulls and dragons in alternate rows. The walls of the gate were 55 ft. thick. It was interesting to note that the glazes recently discovered at Ur were identical with those on the Ishtar Gate.

The Persians took over the Assyrian types of figures, but used Babylonian technique. Passing over a thousand years, they found glazed ware used in China in the Tang

Coloured and Glazed Faience Work: Durban War Memorial.

Dynasty (A.D 618-906). Twenty-five years ago practically nothing was known of the work of this period in China, but the opening up of railways had made it possible for investigators to get access to the districts in which they were to be found. The glazed sculpture figures of China were usually architectural ornaments, such as roof finials, decorated slabs, figures for niches, etc. They were made of a hard clay and glazed in green, yellow, purple, brown and white. Tomb figures were made in great numbers, often roughly finished but very spirited in modelling; they could certainly be classed as works of art.

The lecturer then showed slides of modern work in glazed ware. His feeling in designing in this material, he said, was that the effect should be sharp and crisp, and that very careful attention must be given to pattern and colour. The colour was an added thing with which the artist could play; in its right place, and properly used, colour ought to contribute to the interest and to keep the carrying power and the distant view. The colour should be a mosaic of colour contrast and pattern, rather like glass—clean, sharp, and well-defined. The fewer accidental or "interesting" effects the better. Pottery was a difficult and trying craft at any time, but when the artist got outside the usual routine it bristled with difficulties and pitfalls.

On a piece of work of the scale of the Durban Memorial, which was 21 ft. high and weighed 14 tons, great care and calculation was necessary before starting. The 14 tons of clay had to be erected, hollow, and without armature of strengthening such as sculptors could use in making models; it had projections of 17 in., and had to be kept in position for four months after it had been made. First a model, very accurate to scale, was made, and from this full-size sections were taken off on to three-ply wood by a scale-pointing machine. The whole of the clay was moulded on an enormous easel, sloping to the back at the top and with projections or ledges to support the clay. The whole of the easel was made so that sections could be taken down from the back in order to be able to get at the back of the clay to keep it moist. A further difficulty was that the shrinkage of clay, which amounted to about eleven-sixteenths of an inch per foot, had to be taken into consideration and allowed for; thus, the model as made, or "clay size," was larger than was required to fit the memorial, and shrunk to the proper size after it was modelled. It also had to be protected from damp and wind and frost; if frost reached the clay it would have made the surface too sticky to be worked. After it had been made, the piece was cut into sections averaging in weight about two hundredweights; this was necessary in order to fire it, as the entrance to the kiln would not allow of larger pieces being fired, even if it had been possible to cut and lower larger sections to the ground without damaging them. The glaze was then applied to the pieces, and they were fired. After firing, they were assembled on the floor ready for dispatch to South Africa.

Discussion.

MR. WALTER BAYES said he had been much interested in the question of colour in sculpture, for which he thought there was much scope. Unfortunately, in Victorian times, owing to the fact that the Greek sculpture then discovered showed no traces of colour, it was considered that sculpture should not be coloured, and it was a long time before this generally accepted opinion was altered. When these ideas were formed, the charming early temples, with fired-ware tiles for roofing and decoration, were entirely overlooked. Generally speaking, the public did not understand form, but they did understand colour, and for that reason he thought colour might be more extensively used in suitable positions. He had experimented with colour in sculpture, and found that a piece of fine hard glaze for outdoor work came nearer to satisfying his ideas than any other material. He was particularly interested in salt glaze, which had certain qualities that appealed to him more than any other. Charming as it was, he rather thought the Della Robbia ware was not strong enough for the English climate, whereas a really good piece of the kind of fine glazed ware produced to-day was eminently suitable and satisfactory. He thought we had to develop not quite on the Della Robbia lines, but more in keeping with our northern climate. Glazed ware had a great future, especially if glazed reinforced concrete buildings were erected to any extent.

PROFESSOR OXLEY (Durban) said he had seen the Durban memorial since it had been erected, and was much impressed with it. The whole of the glazed ware arrived without any damage whatever. It was particularly suitable to the sunny climate of South Africa, where pigments were liable to fade. He hoped that when he visited England again he would find many coloured faience elevations brightening the streets of London.

MR. GORDON HAKE expressed the opinion that coloured glazed ware would be more frequently used in future, particularly in small quantities, to emphasise architectural features, but he was not an advocate for its extensive use for city buildings.

MR. GILBERT JENKINS said the question of colour in architecture was always a difficult problem. It seemed to be the general opinion that Portland stone was the best material for city buildings on account of its light colour; yet it was found that Portland stone frontages were being painted only twenty years after they were erected in order to brighten them. That raised the question as to whether it would not be preferable to use a glazed material that could be easily cleaned down, and that would resist the sooty atmosphere of our cities.

EXHIBITION NOTES

THE more we see of the Belgian and Flemish Exhibition at Burlington House, the more grateful we feel for the study of so fine a period of art, which included the work of Van Dyck, Rubens, Mabuse, Memlin, Van Eyck and others of this notable school of painting. The religious feeling which prompted so much of it may have largely disappeared, but the art still lives, and one could wish that much of the colour and variety of modern life had as sincere and worthy exponents.

The three galleries devoted to the work of the two dead sculptors, Hamo Thornycroft and Derwent Wood, exhibit some of the more beautiful and forceful work of modern sculpture. The four large figures by Derwent Wood, Nos. 81, 83, 84 and 86, are fine typical female figures, and that of Atalanta is, to our thinking, one of the most delightful amongst all modern conceptions. But one of the sweetest and most telling of all this artist's works is the kneeling figure (183) which was exhibited at the R.A. in 1924. The refined and tender charm, the simplicity and breadth of the figure have surely never been excelled. Thornycroft's work may now be reviewed with fresh appreciation in the Gallery No. X, where one may find renewed pleasure in the groups and figures he produced with a happy mingling of vigour and refinement. These two sculptors are worthily memorialised in these three galleries at the Academy.

The Pastel Exhibition shows on its not overcrowded walls more good things than usual, though one can hardly feel that the special qualities of pastel are largely shown. There are groups of admirable drawings by Leonard Richmond, Wm. Redworth, Hans Richter, Leonard Squirrell, and Terrick Williams. There is still too much effort to simulate the effects of other media and a consequent loss of freedom and ease.

MEETINGS

MONDAY, *January* 17.

Royal Institute of British Architects.—Award of prizes and studentships: Criticism by Mr. R. Atkinson on the work submitted. President's address to students and presentation of prizes. 8 p.m.

Royal Sanitary Institute.—Mr. A. E. Munby on "Elementary Science." 6 p.m.

TUESDAY, *January* 18.

Royal Institution of Great Britain.—Mr. R. Whytlaw Gray on "Smokes as Aerial Disperse Systems." 5.15 p.m.

London University Lectures.—Mr. E. G. Richardson on "Acoustics of Buildings." At the University Physics Entrance, Gower-street, W.1. 5.30 p.m.

College of Estate Management.—Mr. G. Mould on "The Effect of Recent Legislation on the Law of Vendor and Purchaser." 5.30 p.m.

WEDNESDAY, *January* 19.

London Society.—Visit to the London Coliseum, St. Martin's-lane, W.C.2. 11.15 a.m.

THURSDAY, *January* 20.

Society of Antiquaries. 8.30 p.m.

Royal Institution of Great Britain.—Mr. J. R. H. Weaver on "Romanesque and Early Pointed Architecture in Spain (Eleventh to Thirteenth Centuries)." 5.15 p.m.

FRIDAY, *January* 21.

Royal Sanitary Institute.—Mr. A. E. Munby on "Elementary Science." 6 p.m.

THE SURVEYORS' INSTITUTION

On Monday last Mr. F. G. Baxendale, F.S.I., ad a paper on the "Effect of Values of Town- anning Schemes in Their Various Stages" efore this Institution. The stages referred to, id the lecturer, might be summarised in periods time :—(1) Resolution: Date of resolution by ouncil to prepare scheme, to date of adoption preliminary statement. (2) Preliminary atement: Date of preliminary statement, to te of approval of same by Minister of Health.) Draft Scheme: Date of draft scheme, to date approval of same by Ministry of Health.) Scheme.

Dealing with Stage I, Resolution, the lecturer id that a town-planning scheme was inaugu- ted by resolution of the council, to the effect, at they propose to apply to a defined area the ovisions of the Town-Planning Act of 1925.

From the date of such a resolution this area as definitely earmarked for subsequent detailed anning, according to the Act, and subject to gulations which the Minister was authorised to y down. The effect upon values would depend on the wisdom and propriety of the scheme, lopted after consideration by, and consulta- on between, the Council, the owner, and the inistry of Health, with their expert advisers. his stage had no effect which could be measured on the value of land in the selected area. The ower to include land outside the boundaries of e Council might affect its value to a marked tent. A rural belt might be linked to a veloped or urban area, with facilities for roads, ainage, &c., which otherwise would be cluded from the provisions and undoubted nefits of the Act, because it formed part of a ocal Government area where town planning as not at present compulsory. Similarly veloped land might be shown within the heme "to secure the general object of the heme." Inclusion of such land in normal rcumstances presupposed interference with its en condition, to bring uniformity into a pro- sed zone, to ensure the widening of streets, or complete the site of an arterial road.

If the amount of land withdrawn from agri- ltural users was taken for the decade before e war, it was possible to forecast that, provided velopment proceeds at the same rate for the xt 1,000 years, there would be no land left hich was suitable for agriculture. The restric- ons in town-planning schemes, at a modest timate, would increase the demand for land from 25 to 30 per cent. and thus accelerate e covering of land by buildings in that ratio, other factors such as population and trade pansion remained constant.

Dealing with stages 2 and 3, Preliminary atement to Confirmation of Scheme, the cturer said that for present purposes these two ages might be dealt with together, especially the Council sometimes omitted Stage 2, pro- eding direct from resolution stage to draft heme. During both stages, the scheme was adually being modified and modelled into the al form. At Stage 2 the public local inquiry as always held, and the owner had his first rmal opportunity of expressing his views, though he would, if wisely advised, have been touch with the local authority in Stage 1. second local inquiry was also held before the aft scheme was approved. Immediately the ouncil passed a resolution adopting the pre- inary statement, the value of all the land in e scheme was affected, in some cases to a arked degree. From that point of time the nd was subject to specified restrictions, some viously beneficial, some from the owner's ndpoint prejudicial, but all in theory devised the interests of the community. No right to aim compensation yet had arisen; although me of the provisions carried with them a right compensation on the final confirmation of the heme, some carry no such advantage. To ovide for this difficulty the Minister of Health d issued an order [Statutory Rules and rders, 1922 (No. 927)] whereby an owner ight apply to the authority for permission to oceed with development before the scheme is nfirmed. These rules provided for an appeal the Minister, if the owner was dissatisfied with the Council's decision, and a permission issued under these rules preserved the owner's right to claim compensation at a later date. The lecturer then dealt with a few points upon these provisions for which compensation was *not* claimable.

Zoning : Character.

As the character of a building was dependent upon its use, it had been assumed that the restrictions imposed would affect not only the style of its construction, but its subsequent user.

The Council were empowered to consent to certain exceptions in the character of building erected in certain zones, and could consent to modifications of user.

The main difficulties in connection with zoning arose from the complexities of our system of land tenure, the large number of owners, and the limited area available for certain necessary industries. The owner of a large area might be able to arrange matters so that what he lost on the swings, he gained on the roundabouts; but the small owner might suffer by character zoning. He might even be precluded from using his land for a purpose to which he was restricted by covenant, but the Ministry would, no doubt, take such matters into account before approving the scheme. An optimistic view might easily be taken of the amount of land required for domestic buildings, especially small houses; and for reasons relating to amenity reluctance to provide spaces for necessary trades might be shown even where such trades would enhance the value of land as well as the receipts from rates.

Zoning : Density.

The requirements of the scheme as to density would normally relate to dwelling-houses only, the density of other buildings being regulated under the provisions as to space about buildings. The density was measured in terms of "land units" as determined by the local authority, subject to appeal. A land unit might represent one plot, one owner's land, or even the land of a group of owners but limited to a maximum of 7 acres. The sum of the dwelling-houses on all the land units in a zone will equal the total area of the zone multiplied by the number per acre prescribed in the scheme.

The requirements of the schemes with regard to space about buildings would relate also to the use of land for purposes other than housing, which were difficult to deal with under the regulations as to density. In normal circumstances the scheme would provide that only a part of the site should be covered, varying with the height of the buildings. The proportion varied in different schemes, but in schemes already confirmed the maxima of three-quarters and two-thirds had been provided, in respect of buildings for trade. Special regulations were sometimes included in regard to buildings facing two streets.

Regulations under the draft scheme might fix a maximum height of buildings, a maximum number of stories, or a restriction prohibiting the erection of a building beyond a line drawn at an angle from the centre of the road, upon which the building abuts.

Referring to Stage IV, Scheme, the lecturer said that a town-planning scheme when confirmed by the Minister had all the force of an Act of Parliament, and in certain respects might override the by-laws current in the district. Moreover, it did not prevent the Council from putting into practice any local or general Act under which they were authorised to proceed. Compensation was claimable within the time stated in the Act, calculated from the date of confirmation except where the scheme otherwise directs. The period named is usually 12 months. With regard to the effect on land values at the making of the scheme, the measure of injurious affection or increase in value, upon the making of the scheme, would in normal circumstances, be represented by the difference in value of the claimant's land or interest before and after the imposition of the restriction. Damage would occur through excessive width of streets and interference with estate lay-outs, by severance and consequential damage to farm lands.

Regarding the effect of construction of streets, the lecturer said that certain items of claim were allowed to be deferred, on the ground that the damage would not accrue until works are carried out, and in most cases the owner would be well advised to agree to deferment. Where the Council, after the confirmation of the scheme, proceeded to enter and construct a street of *by-law width*, it was difficult to foresee how a claim would arise except where buildings or fully-developed land were involved; in any case, the damage fell to be ascertained subject to the restrictions imposed which might have formed the subject of a claim (if any) on the making of the scheme.

Speaking of the prohibition of advertisements, the lecturer said that the scheme might provide that, the display of an advertisement "in such a position or manner as to injure the amenity of any part of the area" was a direct contravention of the scheme.

Such a clause would no doubt have no effect upon advertisements already displayed before the date of resolution. The Model Clauses provided that a person desiring to advertise upon land might apply to the Council for permission.

Failure to refuse within one month might be taken as consent, and in the case of refusal there was an appeal to Petty Sessions. The Council might register trees within the area of the scheme which, in their opinion, should be preserved to secure amenity; this register might be included in the scheme or could be made *at any time*.

In conclusion, the lecturer stated that the scheme did not vest any land in the Council, but gave them power to acquire certain portions for particular purposes.

Now that the procedure of purchase had been brought within the regulations under the Acquisition of Land Act, 1919, it did not appear necessary to make more than a passing reference to the question. Where compensation had been paid on the making of the scheme, in respect of any matter, the value of the land upon purchase fell to be ascertained subject to the restriction or regulation imposed under the scheme. The scheme might be revoked, in whole or in part, and a new scheme might be approved by the Minister. In such circumstances compensation was payable, limited to expenditure incurred by the owner in conforming to the original scheme.

Belfast War Memorial.

On behalf of Sir A. Brumwell Thomas, of London, the architect who has been engaged on the war memorial scheme for the Belfast Corporation, the following statement has been issued in explanation of the delay in completing the conversion of the City Hall grounds into a Garden of Remembrance :—

"Sir Brumwell Thomas has for some years past been pressing, both at interviews and by letter, the Corporation to carry out the completion of the work, and he has expressed not once but several times to the Corporation his wish to carry it out at once; but the Corporation refuses to enter into the necessary short agreement with Sir Brumwell, putting him in a position to act. In all contracts affecting over £50, the usual and legal practice is for Corporations to execute a contract employing the architect under the seal of the Corporation, and this is necessary and desirable both in the interests of Corporations and of the architect. The law is quite clear upon the subject, both in Ireland and England, and the Royal Institute of British Architects has drawn the attention of its members to the necessity of having properly sealed contracts with all public bodies. Sir Brumwell has asked for this contract, and the Corporation refuses to give one and insists upon Sir Brumwell acting without any such contract. Sir Brumwell, who was the architect of the Belfast City Hall, is most anxious to complete his work at Belfast, and has expressed his willingness to deal with the matter at once and carry out his plans, which have been before the Corporation for some years, as soon as the contract has been sealed."

"The Builder" Map.

We inset, by special permission of the London County Council, a map showing the boundaries of the Surveyors' Districts under the Building Acts. There is no need for us to emphasise the value of this map to all who are concerned with the carrying out of building work in the L.C.C. area.

"The Builder" Calendar.

The subject of our Calendar is the new Piccadilly Circus, as rebuilt to the elevational designs of Sir Reginald Blomfield, R.A., who has also been responsible for the external elevations of the Quadrant, Regent-street, a glimpse of which is shown in our view. Mr. J. J. Joass, F.R.I.B.A., is the architect for Messrs. Swan & Edgar's (the middle block of buildings in the illustration), and Messrs. Higgs & Hill, Ltd., are the general contractors. The block shown on the right hand side is the new building for the County Fire Office, Ltd, the architects for which are Messrs. Ernest Newton, R.A., & Sons, and the general contractors Messrs. Holloway Bros. (London), Ltd.

New Headquarters, Lloyds Bank, Ltd.

The new building for Messrs. Lloyds Bank, Ltd., now in the course of erection, will occupy a fan-shaped site with frontages to Cornhill and Lombard-street, of 146 ft. and 198 ft. respectively, and will house both the Head Office department and the City Office. The accommodation, apart from the basements, will be provided in eight stories above the street level, the ground floor and the mezzanine floor immediately above being devoted to the City Office, the remainder being allocated to the Head Office.

The structure will be of steel-framed construction, and the main fronts are to be faced with Portland stone with granite plinths, window jambs, and keystones to the ground floor arcaded story. The entrance doors are to be of bronze enclosed in a marble surround, and the infilling of the arched window openings will also be of bronze.

The banking hall on the ground floor, which is planned on an axial line equidistant from both sloping fronts, will be finished with marble wall linings, columns, floor and counter, the latter enclosed with metal grilles.

The contractors for the work are Messrs. Trollope & Colls.

The architects are Sir John Burnet & Partners and Messrs. Campbell Jones, Sons, & Smithers, with Dr. Oscar Faber acting as structural engineer.

The Royal Mail Steam Packet Co's. Head Building.

This building is being erected on a site adjoining Lloyd's new building, with frontages to Leadenhall-street and Lime-street. Both façades are in Portland stone. There are two basements and seven floors above the ground. The builders are Messrs. Trollope & Colls. The general foreman is Mr. H. Goodman, and the clerk of the works is Mr. W. Le Marie.

Sir Edwin Cooper is the architect for both the Royal Mail building and the new Lloyd's.

Star and Garter Home, Sandgate, Kent.

The site of this building is in private grounds overlooking the sea. Every advantage has been taken in planning to provide loggias and terraces, from which shelter and fine views are obtained. The building is of brick with rendered walls, and the roof is tiled with local tiles; there are sash windows with green shutters. On the ground floor are the administrative offices, reception and recreation rooms, and a fine memorial dining-hall, with two wards for patients, each for seven beds, overlooking the garden front. The upper floors are entirely given up to the patients' wards and bedrooms, and accommodation for the staff.

The main contractor is Mr. G. Jackson, with Mr. S. Braine as general foreman. The clerk of the works is Mr. G. Hooper.

Sir Edwin Cooper is the architect.

Stratton House, Piccadilly.

We give this week a drawing of the proposed new block of flats, to be named Stratton House, on which the builders are soon to begin operations. It will have an extensive frontage to Piccadilly, and an unobstructed view over the Green Park looking south, the east front to Stratton-street and the west overlooking Bolton-street. The ground floor will be used for banking and business purposes, and the whole of the upper floors will be built as flats having large airy rooms, many of them with balconies and with an unusual number of bed and bath rooms. The plant for heating, hot and cold water supply, &c., will be arranged in a sub-basement. The flats will be built of fireproof construction throughout, with central heating on the panel system, in addition to open fireplaces and electric fires, and the modern systems of gas and electric cooking arrangements. The elevations of the building will be in Portland stone.

Mr. W. Curtis Green, A.R.A., is the architect, and the builders Messrs. Holloway Bros. (London), Ltd.

Spitalfields Market.

Spitalfields Market covers an area of 125,000 sq. ft., or about 2¾ acres, and consists of stands on the ground floor let on weekly tenancies for the sale of fruit and vegetables, and on the first floor a number of residential flats. The original scheme of improvements proposed by the City Corporation, who own the market, was superseded by a new scheme, approved by the Departmental Committee on Wholesale Food Markets, and the necessary powers were obtained in the City of London (Various Powers) Act, 1922. This Act also authorised the holding of the market on every day of the week except Sunday, and the levying of toll on the sellers or salesmen in the market in lieu of the senders, but this provision does not come into operation until the improvements are effected.

It is estimated that the extension will cost £2,000,000, and the Corporation is authorised to raise a loan for that amount. The present capacity of the market will be nearly doubled, the total area then being five acres. Extension is being made westwards from the present market. The scheme has necessitated th acquisition of surrounding properties at a co of over £500,000. The extension will h 98,220 ft. super on the ground floor an 101,440 ft. super in the basement as a resu of tunnelling under the existing marke Thirty-four warehouses, with storage spac above and below, will be erected on three sid of the extension. When the scheme is com pleted the market will have a total stre frontage of 2,000 ft., and the aggregate frontag of the warehouses and stands will exceed a mi and a half. So that traffic may be able to circu late freely in the market the interior will b divided into main avenues 25 ft. wide, and othe 20 ft. in width, and to these there will be fiv entrances from Lamb-street, five from Brus field-street, three from Commercial-street, an three from Steward-street.

It was intended that the entire structur work should be of steel, but the coal stoppag and the consequent cessation in the productio of steel led to the abandonment of this form construction in favour of ferrocrete, the rapi hardening Portland cement, for a portion the work.

Over an acre of glass will be used in th skylights over the new roof, and more tha 4,500 tons of concrete; 24,000 tons of sand an ballast and 2,000 tons of constructional ste will be required by the contractors, Messr John Mowlem & Company, Ltd., of Ebur Bridge-road, S.W. 1. The architect of th scheme is Mr. Sydney Perks, F.S.A., the Cit Surveyor.

Considerable street improvements form pa of the scheme. Parts of the widened stree will be used as "lay-byes" to facilita further the business of the market. Lam street, on the north, which was about 23 f wide, has been temporarily widened to 36 ft and will ultimately be made 60 ft. wid Brushfield-street, on the south of the exte sion, which is now about 31 ft. wide, will al be widened to 60 ft.; Crispin-street, on th west side of the present market, is being bui upon and included in the market; and Stewar street, on the west, now about 33 ft. wide, w be made 80 ft. wide. A large number of peop have been dispossessed of their former hom by the scheme. They are being re-housed two sites which the Corporation acquired the borough of Stepney. Two blocks of dwellin have been erected.

With the three large lavatories, the total co of the work now being carried out Spitalfields will be over £310,000.

We are informed that, in connection with th work, Messrs. Cowan Hulbert's "Insley" exc vator and "Rooshor" patent adjustable sho are being used. "Conforms" patent stampe steel centering is also being used on this job.

British Mercantile Marine Memorial.

Our illustrations this week include one of th proposed memorial to be placed on Tow Hill to the men of the British Mercantil Marine who died in the war, which has bee designed by Sir Edwin Lutyens, R.A. It wi have inscribed upon it the names of 12,000 me of the Mercantile Marine whose graves are th sea, and is to take the form of a vaulted corrido 64 ft. long, divided into three bays, with arch ways at each end, 8 ft. wide and 21 ft. high The memorial will be placed on the south sid of Trinity-square, bordering a public footway

High Altar and Reredos, Ampleforth Abbey.

This work has been lately completed in th new Church at Ampleforth Abbey, York from the designs of Sir Giles Gilbert Scott, R.A

The general contractors were Messrs. Hollowa Bros., and the following were sub-contractors W. D. Gough, models of reredos; J. F. Boot & Son, Banbury, reredos; Watts & Co. hanging rood; G. N. Haden & Sons, Ltd heating.

Forestridge, Sussex.

This was an old house and has been entirel remodelled. The work is now being completed and makes an interesting group of building abutting on to what is practically a privat road. The materials used are Sussex brick

and tiles, with a small quantity of Portland and local stone.

The architect is Sir Edwin Cooper.

Bath War Memorial.

This memorial, designed by Sir Reginald Blomfield, R.A., has for its principal feature that architect's Great War Cross set in front of a semi-circular curtain wall, in the middle of which, at the back, is a specially treated panel space for the names of the fallen. Steps lead up on either side of the Cross to a raised platform, the front of which is protected by some simply designed wrought-iron railings.

The Ocean Accident & Guarantee Corporation, Ltd.

This new building has been erected at 36-44, Moorgate, E.C., from the designs of Sir Aston Webb, R.A., & Son. The portion now completed replaces four houses fronting towards Moorgate, which were altered and adapted at various times, but had become insufficient to accommodate the increasing staff of the Corporation. The new building, which is exceptionally well-lighted, is steel-framed and of fireproof construction throughout. The frontages are faced with Portland stone. The emblem of the Corporation (a lighthouse) on the angle of the building is the work of Mr. Alfred Drury, R.A.

The building consists of nine floors, seven of which are used as offices, and there are two basements below the level of the street, which contain strong rooms, heating apparatus, electric switch rooms, stationery stores, large cloak rooms and lavatories for the staff; and, in addition, two rooms, each containing about 3,000 ft. of floor space, which are fitted with shelving in racks for filing the many thousands of records in connection with the business of the Corporation. These files are so arranged that any document can be found in a few moments and dispatched by a specially-fitted electric paper lift to the department calling for it. The whole of the woodwork and joinery, including the panelling of the general office on ground floor, is of fine quality teak. The furniture and fittings throughout are also of teak, and have been specially designed by the architects to suit the needs of the various departments.

The large electric passenger lift has a speed of 200 ft. per minute. The stairs and landings are covered with rubber, and the large space in front of counter in the general office on ground floor is also paved with rubber flooring. The entrance vestibule, which is lined and paved with marble, contains four fine columns from Italian quarries. In this vestibule is placed the memorial to those members of the staff who fell during the war; this was removed from the old building and carefully stored during the reconstruction. In the vestibule are placed also the two private post boxes of the Corporation, which are cleared periodically by special arrangement with the Post Office.

The main entrance doors and the ground floor window frames are of bronze and the specially designed window grilles of gilded wrought-iron. The board room has finely quartered figured panelling.

The building is warmed throughout by hot-water, and a system of fans and ducts for supplying fresh air and extracting vitiated air has been provided. A vacuum cleaning plant has been installed, with nozzles on each floor connected by piping to a powerful extracting plant placed in the basement. The building is protected against fire by a system of hydrants placed on each landing of the staircase. Special arrangements for the escape of the staff from the upper floors of the building in case of emergency have been made.

The general contractors were Messrs. Leslie & Co., and the following were sub-contractors: Pollard & Co., interior fittings; Middleton's, wiring; Hawkins & Co., lighting bulbs, &c.; Waygoods, lifts; Wontner Smith, Gray & Co., boilers; Dent & Hellyer, sanitary fittings; Leylands, rubber flooring, &c.; Bainbridge Reynolds, grilles; Clintons, electric clocks; Sturtevant Co., vacuum cleaners; Biancola, staircase works; Dorman Long & Co., steelwork; Farmer & Brindley, marble; Henry Hope, Birmingham, metal skylight; J. R. Pearson, Ltd., overhanging clock; Val de Travers, asphalt; Gilbert Seale & Son, plaster work.

House Near Ightham, Kent.

This house, designed by Messrs. Baillie Scott & Beresford, is at Raspit-hill, near Ightham, Kent, and is of brick with a certain amount of half-timber work. A special feature is the sun-room, at the south-east corner of the house, having windows running almost the entire length of the west, south and east walls. This house has been recently completed. The general contractors were Edward Punnett & Sons, Ltd., of Tonbridge; central heating, domestic hot-water, and electric plant, by the Abbey Heating Co., of Westminster; leaded glazing and metal casements by Geo. Wragge, Ltd., Manchester; sanitary fittings by Messrs. Pontifex and Messrs. Doulton; lead heads and wrot-iron work by Cashmore Art Workers, Ltd.

Messrs. Atkinson's New Premises, Old Bond-street.

The premises of Messrs. Atkinson's, the well-known Bond-street perfumiers, were damaged by fire some time ago and have now been rebuilt to the designs of Mr. E. Vincent Harris. The elevations are very skilfully handled and the shop-front treatment is uncommonly effective. A feature of the exterior is a turret containing a carillon, which provides Bond-street with the novelty of musical interludes. Following is a list of the sub-contractors:—Norman & Underwood, cast lead roof, &c.; Gillett & Johnston, bells in turret; Anselm Odling, marble flooring, &c.; Luxfer Co., lead glazed windows, bronze grilles and pavement lights; Hetley, glass work in shop (mirrors); Mr. Nathaniel Hitch, carving; G. Jackson & Sons, Ltd., fibrous plaster work; J. Jeffreys, Ltd., heating and ventilation, &c.; Grierson, Ltd., electric lighting; F. G. Howard, ceiling lustres; Archibald Dawnay, Ltd., steelwork; Waygood-Otis, Ltd., lifts.

Mount Pleasant New Letter Sorting Office.

The new Post Office building at Mount Pleasant, near the junction of Rosebery-avenue and Farringdon-street, has lately been erected for the purpose of connecting the letter sorting divisions of this Central Post Office Sorting Depot, which work has hitherto been carried out in the existing building, together with parcel work. The basement is planned mainly for stores and staff purposes. The ground and first floors are wholly devoted to the sorting of letters, and the second floor is used by administrative and clerical staffs. Lifts and conveyors connect the floors, and connection with the existing building is obtained by conveyors, bridges and a subway. The building is of reinforced concrete construction throughout, the external face being finished with "Atlas White" cement. The reinforcement, which was designed by H.M. Office of Works, consists of mild steel rounds up to 1¼ in. diameters and many of the bars are over 50 ft. long. Portland cement, ¾ in. ballast and sand from the river Lea were used for the concrete. Keene's cement is used internally. The loading yards are covered with glass roofs and steel trusses.

The general contractors were Messrs. Galbraith Bros., Ltd., of Camberwell, other contractors being:—Hollis Bros. & Co., Ltd., maple wood block floors; Williams & Williams, Ltd., steel casements; Hy. Hope & Sons, Ltd., lantern lights; The Carron Company, cast-iron railings; Clark, Hunt & Co., Ltd., wrot-iron railings; The Neuchatel Asphalte Co., asphalt, roads and roofs.

The architect was Mr. A. R. Myers, A.R.I.B.A., F.S.I., of His Majesty's Office of Works.

Garden Gate, Nether Winchendon Priory.

The garden gate in fine wrought ironwork which we illustrate this week is from the designs of Mr. Philip Tilden, and is a detail of his work at Nether Winchendon Priory.

Long Crendon Manor, near Thame.

We illustrate in this number some exterior views of Long Crendon Manor, near Thame, the work of Mr. Philip Tilden. In this an old manor house has been assimilated into the design, which is partly brick and partly in half-timber Tudor style. The interior is largely designed and furnished to suit the period, with oak beam-work and large open fireplaces.

"Magna Charta," Runnymede.

This is usually accepted as being the spot on which the original Magna Charta was signed. The house, however, dates only from about 100 years ago, and was originally a small cottage, erected in quasi-Norman style. This was added to several times. The recent alterations, the work of Mr. Robert Atkinson, F.R.I.B.A., consisted of bringing the house up to date and increasing its accommodation. A good portion of the previous additions were pulled down, but the original cottage was left practically intact and the new additions built to harmonise with it, although the new work is built in brick and distempered externally, as it was found impossible to execute the work in hard chalk, which is the material of the original house.

New Stations at Ramsgate and Margate.

These new stations have been recently completed for the Southern Railway. Architecturally they are excellent, and show a great advance, both in design and planning, upon anything of a similar type and scale produced in this country within recent years. The stations have been designed in the Engineer's Department of the Southern Railway. Messrs. Rice & Son of London and Margate were the contractors for Margate Station and Sir Robert MacAlpine & Sons for that at Ramsgate.

"Four Winds," Bidborough, Kent.

This house lies just below the crest on the southern slope of Bidborough Ridge, and faces due north and south, with a very fine view over broken and wooded slopes to the south towards Sussex border. The house has been planned to have as many rooms as possible facing south, including an open loggia leading on to a paved terrace, while all bedrooms have wardrobe cupboards and h. and c. lavatory basins fitted. The living-room and den are fitted with coal fires, the house having a complete central heating system throughout in addition. There is electric light with power points throughout, the house being also wired for wireless reception in most rooms.

The elevation is in the Kentish traditional style modernised to suit the neighbourhood, while the general "shape" of the house externally has been designed to withstand exposure to heavy south-west and south-east gales.

The masonry is multi-coloured sand-faced, kiln-burnt facing bricks, set in compo mortar, with wide joints (not pointed), while the old tiles for roof were obtained from pulling down of the barn, cherry-red, hand-made, sand-faced vertical hanging tiles being used to walls above ground floor. All valleys are swept. The style of the windows is lead lights in steel casements, fitted into stout wood frames. The kitchen, lavatories and bathroom are covered with jointless composition flooring; the remainder of the ground floor with Oregon pine blocks set in herring-bone fashion and polished; deal flooring to bedrooms.

The loggia, porch, &c., are paved with 6 in. by 6 in. quarry tiles set square with 1 in. cement joints, slightly raked out to prevent slipping, while the terrace is paved with random square York stone slabs with York stone retaining wall and coping.

Messrs. Arthur W. Cooksey & Partners were the architects, while the general contractors were Messrs. Strange & Sons, Ltd., of Tunbridge Wells, Kent.

Among the chief sub-contractors were:—High Brooms Brick and Tile Co., Ltd., facings; Roberts Adlard & Co., tiling; White & Co., central heating and domestic hot water; Stevens & Adams, wood block flooring; The British Magnesite Flooring Co., patent flooring;

Dent & Hellyer, Ltd., sanitary fittings; Lips, Ltd.,, London, ironmongery; Crittall Manufacturing Co., Ltd., steel casements; Nicholls & Clarke, lead lights; Woco Door Co., internal doors; Vulcanite, Ltd., flat; R. Gay & Co., Ltd., paint and distemper; Septic Tank Co., Ltd., septic tank; Strange & Sons Electrical Engineering Co., Ltd., electric lighting and power; Needwood Plaster and Cement Co., Ltd., plaster; and Candy & Co., Ltd., coal fire interiors.

The Vicarage, Hadlow, Kent.

This house, designed by Messrs. Arthur W. Cooksey & Partners, faces east and west, and has a long frontage so as to make what is really a small house look as imposing as possible. Although domestic in character, there has been an endeavour to retain the expression of a semi-official residence, *i.e.*, the centre around which village affairs revolve.

The bricks used are grey-brown, mottled, hand-made facings set in compo mortar with wide joints (not pointed). Moulded red brick window dressings.

Hand-made sand-faced tiles of dark brown colour mixed with a proportion of dark reds were used in vertical tiling employed to the centre portion of back elevation in brown-red sand-faced tiles. All valleys are swept.

The general contractors were Hyder & Sons, of Shipbourne, Kent, while the following were the principal sub-contractors: — Thomas Lawrence & Sons, facing bricks, moulded window bricks and tiles; Drytone, Ltd., internal doors; Lips, Ltd., ironmongery; R. E. Pearse & Co., Ltd., steel casements and lead lights; Vulcanite, Ltd., flats; Dent & Hellyer, Ltd., sanitary fittings; R. Gay & Co., Ltd., paint and distemper; The Gasworks, Tonbridge, gas fittings; Needwood Plaster and Cement Co., Ltd., plaster; and Nautilus Fire Co., Ltd., gas flue blocks and terminals.

Carreras' New Factory.

The new factory at Mornington-crescent, for Messrs. Carreras, Ltd., of which we give an illustration this week, has been designed by Messrs. M. E. & O. H. Collins in collaboration with Mr. A. G. Porri. The general contractors are Messrs. Sir Robert McAlpine & Sons; while Mr. C. T. Worsell is the clerk of works. The factory which is estimated to cost £500,000, will be the largest all-reinforced concrete building in London. We understand that the plant used by the contractors for the excavation is the "Insley" excavator and boom-plant, supplied by Messrs. Cowan, Hulbert, Ltd., of Abbey House, Westminster.

Old Cottage, Bidston, Cheshire.

The cottage illustrated is one which has existed on Bidston Hill, together with two or three others, for two hundred years or so. When it became the property of the present owner it was situated in the centre of his garden and in many ways interfered with the probable lay-out. He was unwilling to demolish the cottage, and decided to renovate it and add to it and make it serve as a playhouse for his children. The whole of the stonework for the alterations was obtained from the walls of the old shippon, and as far as possible no existing work was disturbed in the building. The additional new room built on the site of the old shippon has been carried out with due thought to the old cottage feeling and finish, and with the exception of the smoke-room illustrated is devoted to the use of the children. The bird bath shown in the illustration is formed of an old pig trough found on the site. The contractors for the work were Messrs. Milestones & Sons, Wallasey. The crazy paving to the paths was carried out by Messrs. Stubbs & Sons, Liverpool.

Mr. J. E. Rowlands, L.R.I.B.A., of Liverpool, was the architect.

R.I.B.A. 1926 Examinations.

The questions set at the Intermediate, Final and Special Examinations held in November and December, 1926, have been published, and are on sale at the Royal Institute, price 1s. 6d (exclusive of postage).

OBITUARY

Sir Francis Fox.

We regret to announce the death of Sir Francis Fox, at his residence at Wimbledon, in his 83rd year.

Sir Francis Fox began his career as an engineer in 1861, when he was 17 years of age, and, in association with his elder brother, Sir Douglas Fox, first in his father's firm of Sir Charles Fox & Sons, and later as a member of the firm of Sir Douglas Fox & Partners, he had a share in carrying out many important engineering works, especially railways and tunnels, during the latter part of the last century and the earlier years of the present one.

In his later years Sir Francis Fox became almost a specialist in the preservation of cathedrals and other ancient buildings, and for this purpose he made extensive use of the Greathead grouting machine, which had been invented to fill in with cement the voids outside the cast-iron segments of the London tube railways. Perhaps the most conspicuous instance in which he applied this method was that of Winchester Cathedral (1905–1912), but under his advice it was also employed at Canterbury and Lincoln, not to mention various old bridges and churches at Ashbourne and elsewhere.

Besides professional papers, Sir Francis Fox, who received a knighthood in 1912, was the author of "River, Road, and Rail," and of works on the Mersey and Simplon Tunnels, the Cape and Cairo Railway, and the saving of Winchester Cathedral. In 1924 he published an interesting volume of reminiscences, "Sixty-three Years of Engineering: Scientific and Social Work."

F. Cayley Robinson, A.R.A.

The death is announced of Mr. Frederic Cayley Robinson, A.R.A., who died on Thursday of last week, at the age of 64. He leaves a remarkable body of work, including many series of mural panels, distributed among a wide variety of buildings and galleries throughout the Kingdom, as well as in America, the Dominions, Italy and France. The Royal Society of Painters in Water Colours, which he joined in 1919, made him its vice-president, and two years later he was admitted an A.R.A. Among his best work in London, besides his "Pastoral" in the Tate Gallery, bought under the terms of the Chantrey Bequest, is the set of emblematic panels he did for one of the foyers of the Middlesex Hospital at the commission of Mr. Edmund Davis.

Ernest Fiander Etchells.

We regret to record the death of Mr. Ernest Fiander Etchells, who died on Wednesday of last week at Balham, at the age of 50. He was an authority on concrete and steel construction, and held the office of structural engineer in the department of the Superintending Architect of Metropolitan Buildings at the County Hall. He was trained at Manchester, Glasgow, and King's and University Colleges, London, and was a pupil of F. L. Lane, of Leeds, and of John Strain, of Glasgow. He was a past president of the Concrete Institute (the Institution of Structural Engineers), and the Association of Architects, Surveyors, and Technical Assistants, and honorary president of the Association of Floor Constructors, honorary A.R.I.B.A., and honorary member of the British Engineering Standards Association. For the present year, 1926–27, he was president of the British section of the Société des Ingénieurs Civils de France.

H. P. Boulnois.

Mr. Henry Percy Boulnois, the municipal engineer, died in London, on Sunday, at the age of 80.

Born on January 15, 1846, at St. John's Wood, he was educated at Pocklington Grammar School and King's College, London. After spending a year on railway construction in La Vendée, he was articled to Sir Joseph Bazalgette, the chief engineer to the Metropolitan Board of Works. In 1870, at the end of his pupilage, he was appointed a district engineer in Jamaica, but resigning for reasons of health after two years' service, he returned to England, and at the end of 1873 was chosen city surveyor of Exeter. In 1883 he became Borough Engineer of Portsmouth, and seven years later City engineer of Liverpool. The latter position he resigned in 1897, again on account of ill-health, and entered the Local Government Board as engineering inspector, retiring in 1911 as deputy chief engineering inspector.

Mr. Boulnois was the author of "The Municipal and Sanitary Engineer's Handbook" (1883). He served as president of the Institution of Municipal and County Engineers and of the Liverpool Engineering Society, and as chairman of Council of the Roads Improvement Association.

Fred Rowntree.

We regret to record the death of Mr. Fred Rowntree, F.R.I.B.A., of 11, Hammersmith-terrace, W.6. Born in 1860, Mr. Rowntree was articled to Mr. C. A. Bury, of Scarborough, afterwards coming to London, where he worked under Edward Burgess. He was more than usually successful in competition, of which one of the more important was the West China Union University, Chengtu, China, which he built in conjunction with his sons, Douglas W. and Colin Rowntree, AA.R.I.B.A. Other works of his are Bootham School, York; The Scottish Temperance Life Assurance Buildings in Cheapside, besides a number of educational establishments and, in association with his sons, Newspaper House, Fleet-street.

Delissa Joseph.

Mr. Delissa Joseph, F.R.I.B.A., died last Monday, in his 69th year. The son of Mr. Isaac Solomon Joseph, he was born in January, 1859, and was educated at Durham House School, and Jews' College. He began practice in 1882, and was soon busily employed in designing synagogues, flats, country houses, factories, and warehouses, blocks of offices, banks and insurance offices, shops, and superstructures of railway stations. About 1886 he was called in to design the bulk of the new buildings occupying the former site of St. Paul's School, between St. Paul's Churchyard and Old Change. He was a member of council of the Royal Institute of British Architects, 1922–3, of the City of London Conservative Association, of Jews' College, and of the Anglo-Jewish Association. Among Mr. Joseph's buildings in London are the Rembrandt and Coburg Court Hotels; Peninsular House, West India House, and Bond Court House, in the City; FitzGeorge and FitzJames-avenues, West Kensington, Rutland Court and Gardens, and Chelsea Court; and superstructures on Tottenham Court-road, Marble Arch, Knightsbridge, Hyde Park Corner, Moorgate-street, and Chancery-lane stations.

Essays on Old London.

An illustrated volume of Essays on Old London, by Mr. Sydney Perks, will shortly be issued by the Cambridge University Press. The essays deal with the restoration and recent discoveries at the Guildhall, London town-planning schemes in 1666, and the scheme for a Thames embankment after the Great Fire of London.

The Old Ely House.

A dispute, involving a relic of mediæval architecture, has arisen between the rector of the Roman Catholic church of St. Etheldreda, Ely-place, and the owners of two adjacent properties in Hatton-garden. The church represents the chapel, crypt, and cloister of the chapel of Ely House, at one time the London residence of the Bishops of Ely. In connection with the rebuilding of two properties in Hatton-garden, the owners wish to pull down a wall which is nearly all that remains of the residential part of Ely House, which is distinct from the ecclesiastical part. They claim that this is a party wall, over which the law gives them control, and that it is so weakened by age that it would not safely support the new buildings to be erected. As a result of representations made to the owners concerned, there had been an informal "stay" for a week or two, pending further developments. Meanwhile the rector is endeavouring to have the stone wall scheduled for preservation by the Royal Commission on Historical Monuments. Failing that, the question as to whether it was a party wall may have to be decided by a court of law.

LEGAL LIABILITIES OF ARCHITECTS AND CONTRACTORS.—II

[Following is the conclusion of a paper on this subject, read recently by Mr. William E. Watson, Barrister-at-Law, before the Northern Polytechnic. The first part appeared in our last issue.]

In another case of negligence before the Court of Appeal, an architect brought action against his employer who had engaged him to design and superintend the construction of a residence. A contract was entered into and the contractor did not properly execute the work. The architect complained of the quality of the work and the employer complained of the architect's negligence in permitting deviations from the contract; later the employer placed the matter in the hands of his solicitors; the contractor presented a claim for £700 and brought action for that amount. The architect eventually gave his final certificate for a little over £100, and upon that certificate the employer successfully defended the action brought against him. The architect then brought action for £123, the amount of his fees. The employer counterclaimed for damages for negligence in not giving proper supervision and in permitting or neglecting to prevent various deviations from the contract. The architect denied negligence and contended that as his certificate had been accepted and acted upon it was binding upon him under the 16th clause of the contract. The jury found negligence and that the architect had certified for more than he ought to have done. They found for the architect £58 and for the employer £90, and judgment was given accordingly. The case went to the Court of Appeal on the ground that the verdict of the jury was against the weight of evidence, and the motion for a new trial was dismissed.

In another case an employer took a lease of premises and arranged with the freeholders' architect for the preparation of a design for a picture gallery to house valuable pictures. After completion the pictures were found to be affected by mildew owing to defective ventilation. The judge put the following questions to the jury:—1. Was the contractor guilty of negligence? 2. Was the architect guilty of negligence in designing and superintending the construction of the building? The jury found no negligence in the contractor and found negligence in the architect, assessing damages against him.

These were ordinary everyday points which arose in an architect's practice; they were pitfalls into which the well-trained and prudent person need not fall. Some cases had been considered by the Royal Institute of British Architects, and the "Conditions of Engagement," revised in 1909, gave expression to them; this document was one which the young architect should study to realise the extent of the duties he owed to his employer, and he should also diplomatically ensure that at the earliest moment the employer also had a copy of that document, thereby setting up the semblance of a contract for future payment. So much for the architect's liabilities; on the other hand, the builder's liabilities might be said generally to cease when he had been granted a final certificate. By this time any defects which had accrued would be rectified and he would go free. A contractor was defined as one who undertook or contracted to supply certain articles or to perform any work or service for a certain price or at a certain rate. Contractors as much as architects must possess the requisite skill to carry out what they undertook, and in large works very great skill and ability were required; if a contractor professed to be a specialist as to any particular class of work he might, when no architect was employed, be liable for negligence and want of skill in planning and designing the work as well as being liable under his contract to carry it out. The employer normally owed no duty to the contractor to superintend, and it was the duty of the contractor to discover for himself if he could possibly perform his part of the contract before signing the document. Not to do so would be an exhibition of blind confidence of an unreasonable kind, but nevertheless it was a very common one. The contractor relied upon the skill of the architect who had prepared the particulars upon which the estimate was based, but in law he probably did so at his own risk entirely. This was based upon the principle that the contract was between the employer and the contractor; in the contract the architect was named, but he owed no duty to the contractor, because the contractor did not pay him.

The architect's duty (until the arbitration stage of the contract was reached) lay solely towards the employer, and if he did not guarantee the work done by the architect the onus was upon the contractor to make a thorough completion in a workmanlike manner of that for which he contracted. If this was not done, or was performed in so negligent and unskilful a manner as to be quite different from that contracted for and therefore useless to the employer, he might refuse to pay for it at all and might give the contractor notice to remove it from the site. If, on the other hand, the employer accepted the work he must pay a fair value for it. Useless work, according to this rule, was that which would have been useful but for the carelessness or lack of skill on the part of the contractor, but it did not include useless work performed skilfully. It was no excuse for a contractor doing useless work to prove that it could not be done otherwise unless he told the employer or could prove that the employer had knowledge of such impossibility. For instance, a contractor was employed to put up a new kitchen range with an old boiler behind. Hot water could not be got from the boiler, the flues not being efficient. The contractor said the space was not sufficiently large to make the flues effective; the employer replied that if he had known this he would not have had the work done at all; the employer won his case on the ground that the work was done in an improper and unworkmanlike manner.

The architect's liability might be said generally to lie in an action for negligence; on the other hand, that of the contractor might lie in negligence also, but it might also lie in trespass or nuisance. It was prima facie trespass if a contractor in any way interfered with the property belonging to another, and it had been held that an action of trespass could be maintained even upon driving a nail into the wall belonging to an adjoining owner. Nuisance also might be maintained against a contractor for raising a building so that the lights of a dominant owner were prejudiced. Nuisance might be defined as "any act which without direct physical interference materially impairs the use and enjoyment by another of his property or prejudicially affects his health, his comfort or convenience." So it would be appreciated that there were many duties within the purview of a contractor from which an action for nuisance might flow; it might be contended that the contractor was covered because he was acting upon the instruction of the owner or his agent, but it was no defence for a person to say he did a wrongful act or he did a lawful act in a wrongful manner on the instruction of someone else. It was obvious that would be no defence in a criminal action, and prima facie it was no defence to a civil action. On the other hand, where action was brought against a building owner it had been held no defence to say he employed a competent contractor to perform the work.

It had been said that lack of diligence or prudence connoted negligence, and this was illustrated by a case where the owner of a house brought action against builders claiming damages because in course of rebuilding an hotel they caused cracks and other defects in plaintiff's adjoining house. The builders contended, first, they were performing the work under the provisions of the Metropolitan Building Act; secondly, the defects were a necessary consequence of the work; and thirdly, the claim should be made against the building owner. It was held the Metropolitan Building Acts did not exonerate a builder from liability for damage which had arisen by his negligence and want of care or skill, and the plaintiff won his case. Lack of diligence or prudence on the part of a contractor might also connote nuisance, as was illustrated by a case in which plaintiffs were owners of an old house which, although infirm, was held by the judge to have been in a stable condition. Defendants were contractors for making the foundations of a very large building to be erected opposite plaintiff's house, and in the course of their operations it was necessary to drive a large number of piles through the soil into the London clay, which lay at some depth. The pile-driving began in November, 1920, and it was proved that vibration arising therefrom was felt in the plaintiff's house and also in the adjoining houses. Shortly afterwards grave structural defects appeared in the plaintiff's house, in consequence of which an order was made for its demolition as a dangerous structure. Plaintiffs claimed damages from the contractors, who alleged (1) that the vibration from the pile-driving could not cause damage; (2) that if it had done so plaintiff's house, on account of its age and unstable condition, was not entitled to limit the defendants' lawful operations on their own land. It was held by the Court (1) that the damage was caused by the vibration; (2) the age and condition of the house were not such as to free the contractor from liability.

The contractor normally carried a responsibility and consequent liability with regard to compliance with building regulations in force. For instance, an owner employed a contractor to erect a building in London, and after completion a notice was served by the County Council to demolish and rebuild upon the grounds that the mortar was not composed of one part of lime to three of sand or grit, as required by the London Building Act, 1894. The owner demolished and rebuilt, then brought action against the contractor to recover the whole cost of pulling down and rebuilding plus also the loss of ground rent. He won.

The contractor normally also had responsibility under the Building Act, 1894, Part VIII, with respect to party walls. Some years ago a building owner employed a contractor to pull down and rebuild his house. The contract contained the usual clause regarding responsibility for contiguous and adjoining premises. Owing to the negligence of the contractor's foreman while underpinning a party wall, it fell, and it was held the cost of rebuilding it, together with works contingent thereupon, should fall upon the contractor, involving a sum approximating some £5,000.

The contractor's liabilities under a contract were very extensive and included duties towards the public in general and particularly to those who by invitation might have rights or licence to perform duties in or about the building works. It also included a responsibility to comply with Building Statutes, Public Health Acts, and Local By-laws. It included duties to third persons and to employees, both under statute and at common law. In the time at his disposal it would be impossible to cover such a very wide field, but he ventured to hope the rough outline given might be of assistance to some, and if it conduced to a closer liaison between architects and contractors it must benefit the building owners, their masters.

Lectures: Victoria and Albert Museum.

A further series of informal lectures, illustrated by lantern slides, has been arranged to be given in the Lecture Theatre of the Museum, from 5.30 to 6.30 p.m., on Thursday evenings to March 3. The subjects of the first five lectures and the last have been chosen with special reference to the Exhibition of Flemish and Belgian Art, which is being held at the Royal Academy during January and February. Admission to these lectures will be free.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Colouring Sand-Cement.

SIR,—With reference to the colouring of sand-cement and roofing-tiles, I should be glad of some information as to the best colour to use and as to names of firms supplying it.

D. FIELD.

Worm-eaten Oak.

SIR,—Some Elizabethan oak panelling was purchased about twenty years ago and stored, awaiting an opportunity for re-use, which has now arrived. On examination, the panelling is found to be worm-eaten in places. Is there any means of telling if this is an old blemish and the worms are now dead, or if the trouble is still in progress? In the latter case, what is the best remedy before putting it alongside new oak?

LEVER.

Responsibility for Faulty Design.

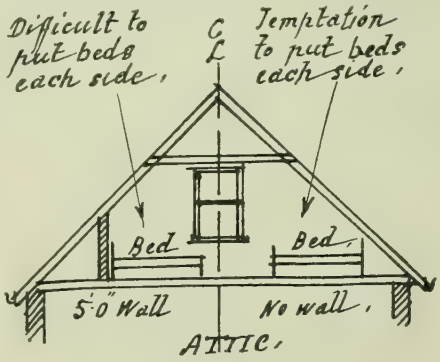
SIR,—What degree of responsibility does an architect or a consulting engineer automatically assume if he issues signed drawings and calculations of a structure in the event of that structure or any part of it collapsing through bad design?

Would a clause inserted in the conditions of engagement, delegating the responsibility to him or the contractor, for the safety and stability of the structure over a period of years, hold weight at law in this country? I understand that in France under the Code Civile, the architect or engineer and the contractor are jointly responsible for 10 years after the completion of the work. Is there any equivalent law in this country, or alternatively, has any precedent ever been given?

I recognise that in the event of loss of life occurring on such an occasion, a court of inquiry would endeavour to place the responsibility on the guilty person or persons, but I am anxious to know, should the verdict be taken against the architect or engineer, whether the employer has legal authority to demand monetary compensation in respect of the damaged structure or any part thereof?

RESPONSIBILITY.

Ownership of Party Walls.



SIR,—I enclose a scale drawing with my query, whose wall is it, or is it a party wall? The wall is of 9 in. brick for greater part of a height of 45 ft., and thickens out to 14 in. at ground floor level (there being a basement) on the side of owner B. Owner B has three chimney breasts running up the full height, and culminating in one double and two single chimney stacks. All the flues in the single stacks are his, and extend to within 4½ in. of the back of the wall. In the double stack his two flues are back to back with one on A's side, but the latter's flue abuts against this wall, while B's flues penetrate and the mid-feather is on the outer face of wall on A's side.

The old building on B's side has been pulled down and rebuilt. Following on above query, and forming query No. 2, has B the right of tie into this wall? and No. 3, If in the rebuilding he has under-pinned this wall, can he recover the cost of so doing in the case of the wall being decided to be A's; or half ditto if it is a party wall?

PARAPET.

By-laws Relating to Buildings and Streets.

SIR,—Your articles on By-laws bid fair to be most interesting. With regard to your remarks on the requirement of 5 ft. "walls" to attics which are used for human habitation, I am not at all sure the By-law is undesirable.

Without this proviso an attic might have a very large floor area with a poor average height. A large floor area to a sleeping apartment is a temptation to put a lot of beds in it, at a push. The 5 ft. "wall" proviso prevents, I suggest, overcrowding and ensures a fair average height to the attic, as will be seen from the accompanying diagram.

It is certainly unfortunate that no general Act permits By-laws to be made requiring windows for lighting purposes. So long as the window is not obstructed as a ventilating medium, it may be so arranged as to permit of a room being dark. What are the precise terms of special Acts permitting By-laws to be made as to windows for lighting? Is it not a fact that the powers given are for staircases only? Owing to the local authority having no discretion, the application of the By-laws is often more severe than it would be if the local authority had such. Take, for instance, the requirement that no "cross-wall" shall be less than 8½ in. thick. A one-story external wall may be supported by half-a-dozen 4 in. division walls and yet because it exceeds 30 ft. in length the local authority must insist on one of these walls being 8½ in. thick or a ghastly pier being provided—each equally unnecessary from the point of view of strength.

SCRUTATOR.

Lino on Floorboards.

[REPLY TO MR. A. C. EDWARDS, JANUARY 7.]

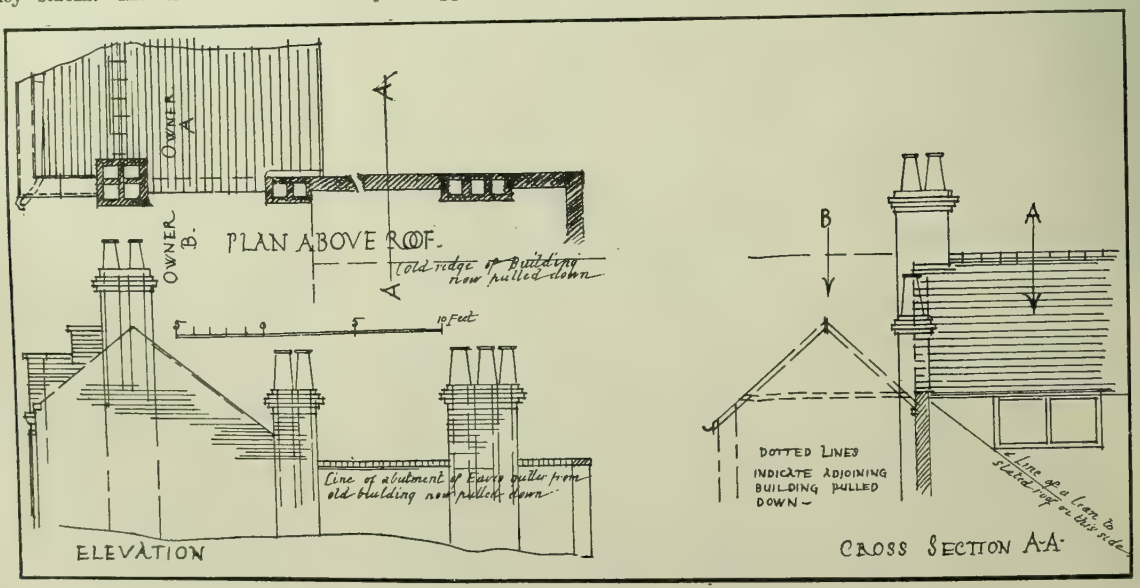
SIR,—There is little doubt that should dry-rot set in at some future time under the present conditions—such conditions having been explained to the architect and allowed to remain without protest—a court of law would hold the architect liable. In spite of this, I am convinced that if dry, uninfected timber was used in the first place, on a perfect concrete base, with no through contact to the soil, there is not the slightest danger of dry-rot setting in, however the top surface may be sealed. Lack of ventilation in a confined space of warm, damp atmosphere makes a condition under which the germs of infection are encouraged, but the incipient rot must have been in the wood or the conditions of contamination present before actual rot will set in. In the case of a wood floor direct on the concrete, provided the latter is perfect, there is no way in which rot can be set up unless the original timber contained incipient dry-rot, which a good deal of post-war timber stocks undoubtedly possess. If your querist is an architect advising in the matter I should recommend him to cover himself with a letter stating that the lino covering remains at his client's risk, though it is his personal opinion that bad effects are not likely to arise if the lino is allowed to remain.

SAFETY FIRST.

Carting Water.

[REPLY TO "CONTRACTOR," JANUARY 7.]

SIR,—A properly worded contract specification should specifically state all those steps required of the contractor in the due and proper carrying out of his contract, such as the provision of plant, watching and lighting and water supply, and the contractor is undoubtedly entitled to an extra where any work is involved which is not covered in the contract documents. In this case it would appear that the building owners were aware of the need and intended to supply it from a separately let contract, so that your correspondent's claim would appear to be doubly founded.



FAIRPLAY.

Lathing Deductions.

[REPLY TO "LATH," JANUARY 7.]

SIR,—Quantities are intended to be documents setting out the exact amount of materials used on a job, therefore a surveyor is quite entitled to deduct the width of partitions where the laths are butted against same and not running over the top into the next room. In practice the amount involved is so slight that it is generally considered not worth while the additional trouble involved on paper in extracting. In 1,000 ft. of partition the amount involved is no more than a sovereign.

BROADWAY.

"Ownership of Party Walls."

THE BUILDING TRADE

BY-LAWS RELATING TO BUILDINGS AND STREETS.—II

In our introductory article we referred to a rumour that the Government proposed at some early date to consolidate the Public Health Acts, and therefore a fitting opportunity might present itself for an amendment of those sections which confer by-law-making powers, in accordance with the recommendations of the Committee on Building By-laws. The consolidation of the Public Health Acts extending from 1875 to 1925 would be a gigantic task in itself and, as a rule, when such an operation is undertaken, we advocate consolidation pure and simple with no amendment or alteration in the text of the sections thus brought together; for, unless such a method is adopted, decisions given under the old Acts become invalidated, and not only have practitioners and others to relearn the law, but litigation is encouraged. We live in an age of codification and amendment, and examples of the two methods are furnished by the recent treatment of two branches of the law. In the case of the statutes relating to Workmen's Compensation the method we advocate was adopted and although the various sections were regrouped with considerable gain in the clearness of the Statute as a whole, the text of each section was practically left unaltered so as to be easily recognisable by those versed in the subject and not to disturb the effect of cases decided upon the old Statutes where no repeal was effected.

On the other hand, an attempt has recently been made to simplify the law of real property, and the six bulky statutes passed with this object are familiar in name at least to many of our readers; but in this case the law has been drastically altered and amended, and we think few practitioners will be found to say that, at any rate in the first instance, the result has been a simplification of the law. We notice that in Sir Arthur Underhill's treatise on these statutes the heading to Chapter II is "Provisions of the Acts intended to simplify or improve the law." We do not know whether the word "intended" is used ironically, but it appears to justify our using the word "attempt."

If the Public Health Acts are consolidated, for the reasons given above, we hope that in the main the Government will not be too ambitious but will confine the operation to a simple codification, but there may be one exception in the case of those sections which confer by-law-making powers relating to buildings and streets. In a sense, the by-law-making sections, which are very few in number, may be said to stand by themselves, and this should make it easy to deal with them on a different basis from the rest of the statutes, as but small amendment of those sections would be necessary, and it is the by-laws made under them that are of importance.

The Committee on Building By-laws, in paragraph 17 of their Report, recommended with regard to statutes in the general law authorising by-laws to be made—(1) That they should be consolidated, the opportunity being taken to stop any obvious gaps, to add any powers that might suitably be exercised by all authorities, and generally to widen the scope of the by-law-making power, on the lines indicated in the Report. (2) That the powers so given should be conferred on all local authorities alike, it being left to the Local Government Board (now the Ministry of Health) under section 184 of the Public Health Act, 1875, to consider on the merits of each case, whether or not a particular by-law-making power should be exercised in a particular locality. (3) That further consideration should be given to a suggestion made before the Committee by a representative of the Association of Municipal Corporations that when the specific topics have been enumerated on which for the moment Parliament considers that by-laws may be made, a power should be conferred upon the Ministry to add other topics, by Provisional or other Order, as they can now do where a local Act gives by-law-making powers.

As the Report of this Committee is a document of great weight which must be consulted when any change in the law is contemplated we may remind our readers that it was a Departmental Committee appointed on April 30, 1914, shortly before the war broke out to consider "the control at present exercised in England and Wales over the erection of buildings and the construction of streets by means of by-laws and local regulations, and their effect upon building and development and to make recommendations." This Committee had held nine sittings when the war broke out and its proceedings were interrupted, but in October, 1917, they were resumed, the Committee having been reconstituted, and the Report was issued on November 13, 1918, and we published a brief notice of it in our issue of January 10, 1919.

The Report remained overshadowed by the war, and the recommendations of the Committee have consequently not received the attention they deserved, but it is an extremely valuable contribution on the subject of by-laws, requiring careful consideration when any legislation is introduced dealing with this question. The Committee throughout their Report lay great stress on the fact that by-laws are not the only method by which control is exercised over buildings and streets—a fact which they think is not sufficiently recognised.

By-laws under the Public Health Act are made by the local authorities under the statutes which authorise them, subject to confirmation by the Ministry of Health. Then there are statutory rules; these, unlike by-laws, are contained in Acts of Parliament, and have only to be enforced by the local authorities.

Besides the above there are regulations which can be made by local authorities without confirmation, and lastly there are discretionary powers. Obviously the only matter affected by consolidation of the law would be the statutes by which the making of by-laws are authorised, so we turn in the first place to these.

Statutory Powers for Making By-laws.

Before the passing of the Local Government Act, 1858, the statutes conferred upon local authorities powers of control, but the control exercised over the laying out of streets, and to some degree over the erection of buildings, was discretionary. By the above Act, for this discretionary control, control by by-law was substituted, and this policy has prevailed ever since, and the Committee saw no reason to revert to the old practice.

The present by-law-making sections referred to by the Committee are as follows: The principal by-law-making section is section 157 of the Public Health Act, 1875: "Every urban authority may make by-laws with respect to the following matters, that is to say—(1) with respect to the level, width, and construction of new streets and the provisions for the sewerage thereof; (2) with respect to the structure of walls, foundations, roofs, and chimneys of new buildings, for securing stability and the prevention of fires, and for the purposes of health; (3) with respect to the sufficiency of the space about buildings and with respect to the ventilation of buildings; (4) with respect to the drainage of buildings, to water closets, earth closets, privies, ashpits, and cesspools in connection with buildings, and to the closing of buildings or parts of buildings unfit for human habitation, and to the prohibition of their use for such habitation. . . ."

Section 23 of the Public Health Acts (Amendment) Act, 1890, which is only adoptive, provides in subsection (1): "Section 157 of the Public Health Act, 1875, shall be extended so as to empower every urban authority to make by-laws with respect to the following matters, that is to say—the keeping water closets supplied with sufficient water for flushing; the structure of floors, hearths, and staircases, and the height of rooms intended to be used for human habitation; the paving of yards and open spaces in connection with dwelling houses, and the provision in the laying out of new streets of secondary means of access where necessary for the removal of house refuse and other matters." Subsection (4) provides, "Every local authority may make by-laws to prevent buildings which have been erected in accordance with by-laws made under the Public Health Act, 1875, from being altered in such a way that if at first so constructed they would have contravened the by-laws."

The only other Act mentioned in this connection by the Committee was section 24 of the Public Health Acts (Amendment) Act, 1907, in a part of the Act which has to be applied by an Order of the Ministry of Health or of the Secretary of State which is as follows: "Section 157 of the Public Health Act, 1875, shall be extended so as to empower the local authority to make by-laws with respect to the height of chimneys of buildings and with respect to the height of buildings, and with respect to the structure of chimney shafts for the furnaces of steam engines, breweries, distilleries, or manufactories."

The Committee characterised the two sections from the Acts of 1890 and 1907 as examples of what they termed "haphazard legislation," leaving legislative gaps. The Report contains examples of what are termed these gaps; for instance, that whilst secondary access to buildings can be required in the laying out of a new street this does not apply to the erection of the buildings themselves, so that if a new street is laid out and plots left vacant, secondary means of access cannot be required to the buildings when erected; that although buildings once erected in accordance with by-laws cannot be altered in such a manner as to contravene those by-laws, there is no corresponding provision as regards new streets; that although by-laws can be made with respect to the structure of walls, foundations, roofs and chimneys of new buildings, by-laws cannot be made as to pillars supporting floors or roofs unless they are part of a wall, nor as to beams unless they are part of a wall, roof, or floor; that walls cannot be required to be soundproof, nor can unsightly materials outside be prohibited; that it is uncertain how far internal partition walls are considered "walls of a building" for the purpose of bungalows; that the composition of plaster cannot be regulated by by-law; that a sufficiency of space about buildings may be required "to secure a free circulation of air," but not for any other purpose. The height of rooms can be regulated, but not their cubical content or area; that although by-laws can be made to secure ventilation they cannot require lighting.

Some of the criticisms contained in the Report appear to us hypercritical; for instance, the Committee considered the introduction of chimney shafts in the Act of 1907 unnecessary, as they considered the structure of all chimneys covered by paragraph (2) of section 157 of the Act of 1875, but they assumed that the "chimney shafts" mentioned in the later Act must be the chimney of a building, an assumption that appears to us hardly well founded as it is possible to imagine a chimney shaft being a structure

standing alone. Again, it was urged that although flushing cisterns for water closets could be required and also the provision of water, no by-law can be made to secure water being brought into the cistern, but surely the words of the section "the keeping of water closets supplied with sufficient water for flushing" must cover this.

However this may be, it was upon the gaps above referred to, amongst others, that the Committee made the recommendation which we have referred to as contained in paragraph 17 of the Report, and following the above criticisms, they say in paragraph 12, "The result of this process has been a legislative patchwork under which the control by local authorities of building and development is restricted to particular topics or particular purposes, while there are many gaps and many sections on similar subjects which do not fit together. In our opinion, restrictions of this kind where they are really technical (such as that which limits building by-laws to certain portions or members of a building and by-laws as to walls to three specified purposes) should be removed, and some power should be given in the direction of enabling local authorities by means of by-laws to exercise control in all matters which are of such a nature as to require control in the public interest and to be suitably controlled by means of by-laws."

SOUTHERN RAILWAY EXTENSIONS

THE Southern Railway has planned a widespread programme of development and reconstruction for 1927. Work authorised and to be taken in hand in the coming year include (*a*) loop at Minster Junction at an estimated cost of £35,000; (*b*) improvements and alterations at Seaton Junction, Devon, to cost £46,000; (*c*) re-arrangements at Eastbourne Station, at an estimated cost of £30,000. New works proposed, for which plans will be submitted to the Railway's directors for approval during 1927, embrace (*a*) new loops and fly-overs at Lewisham Junction and Ladywell Station; (*b*) widening of the line between Kent House and Beckenham Stations; (*c*) widening of main line between Haywards Heath and Wivelsfield. The Southern Railway announce that it is hoped to place every contract with British firms.

Another part of the programme deals with the Southampton Docks extension scheme, by which it is proposed to increase very largely the accommodation available. Parliamentary powers for the first part of the scheme were obtained in 1924, and Parliament will be asked shortly to sanction further work which will be necessary before the full plans can be carried through. The scheme will cost some £13,000,000 and involve the reclamation of over 400 acres lying between the Royal Pier and Millbrook Point. The seaward boundary of the reclaimed area will consist of an embankment at its eastern and western ends and the central portion of a deep-water quay wall 7,400 ft. long. This will give accommodation for eight or ten vessels of the largest tonnage.

A deep-water approach channel will be dredged 600 ft. wide to connect the new berths with the existing deep-water channel opposite the Ocean Dock. Later it is proposed to construct a long jetty parallel to the new quay wall with berths on both sides. Powers are also being sought for the provision of two large graving docks at the western end of the reclaimed area.

The scheme provides for the equipment of the new quays with cargo and passenger sheds, up-to-date appliances for handling goods, warehouses, and roads connecting with the town and railways. The new railway lines will join the company's London-to-Bournemouth main line at Millbrook, and other lines will establish connections with the existing docks. The latter will involve the demolition of the present Toll House and other buildings at the entrance to the Royal Pier. It is proposed to replace these by a larger building more suited to the requirements of the Royal Pier traffic.

CONCRETE MACHINERY AND PLANT

SOME RECENT DEVELOPMENTS.

SCIENTIFIC knowledge of concrete and concrete making has proceeded apace during the past few years, and the design of concrete machinery has improved accordingly in order that the contractor may be in a position to gain in practice the benefit of experiments in the laboratory. Perhaps the most notable contribution towards better and cheaper concrete has been the investigations of Professor Duff Abrams into the effect of water content on the strength of concrete. The important fact brought to light is that, other factors being equal, the strength of concrete is governed by the amount of mixing water, and this is reflected in the fitting of automatic water tanks to most of the up-to-date mixers now on the market. Usually these operate by a syphon which may be set to deliver a predetermined amount of water per batch, thus eliminating the old haphazard method of tipping variable quantities into the drum from a pail or can.

The researches referred to prove that a certain definite amount of water will give maximum strength, and that either more or less will decrease strength. This is of great importance to the contractor, for by using the amount of water proved by tests to give maximum strength for a certain aggregate he can save a considerable amount of cement (the most expensive ingredient of concrete) compared with what would be necessary to give the same strength with the wet mixes so often seen. It is, however, necessary to utter a word of caution: the "cement-water ratio" theory is often interpreted to mean that the less water used the stronger the concrete. To an extent this is true, but there is a limit of stiffness in concrete beyond which the omission of a proportion of water weakens strength to a far greater extent than the addition of the same quantity. If the mix is too dry there may not even be sufficient water present to hydrate the cement, and this, we believe, is often the cause of unsatisfactory concrete. It is specially noticeable in the case of pre-cast concrete, where the necessity for removing the products from the moulds as soon as possible often results in the use of a mix so dry that the block or slab may be released immediately it has been cast. An automatic water tank is a necessity if the best results are to be obtained. The correct quantity of water per batch to give the required strength can first be ascertained by tests, and the tank then regulated to give that quantity and locked so that it can only be altered by the engineer in charge. If the mixer is not already fitted with an automatic tank, one can easily be fitted up with an ordinary cistern of the ball-cock type, and will well repay the trouble taken. In practice it will generally be found (except in the case of pre-cast concrete and foundations, &c.) that the quantity of water giving maximum strength will result in a concrete so stiff that it will not flow around reinforcement or into confined spaces; more water will then obviously have to be added and the proportion of cement increased to make up for the decreased strength following the excess of water, but even in such cases as this it is more economical to have the correct proportion of water to cement.

In their general design mixers have not varied much during the past few years. The revolving-drum type is still mostly used, although the advantages of the open-drum in which the materials are stirred by paddle arms or other means are being increasingly realised. It is a considerable advantage of this type of machine that the materials are in view the whole time they are being mixed, especially when dry mixes are used, as the thoroughness of the mix can be seen from the uniformity of its colour before discharge. Also, the complete emptying of the drum after each mix is more certain.

The latest American idea in concrete mixing is first to mix the cement and water into a slurry, and then add the slurry to the dry materials in the mixer. It is claimed that by this method a better mix is obtained, and that it eliminates the possibility of the cement "lumping," as it may do when water is added to the whole of the materials including the cement.

In this country rapid strides have been made in the use of distributing plant, which is now recognised as indispensable on a contract involving any considerable yardage of concrete. They have proved their value here as they did in the United States many years ago, and are now a standard item of contractor's plant. It may not be generally known that distributing plant may now be hired, so that the economies it makes possible may be taken advantage of without going to the heavy initial expense of purchasing the plant outright.

An item of plant that is becoming increasingly popular as it becomes better known is the steel form. Made in standardised units, with a few specials for corners, steel forms are now used for all types of structures from large dams to small cottages with equal success. These forms, which may also be hired, are practically indestructible, and will save their cost over and over again to anyone who does a fair amount of concreting. It is, however, essential to ensure that only the best types of steel forms, and those that have proved their worth, are used, as an inferior make of steel form will invariably result in a wall that is out of alignment; as a builder recently put it to us, "they are more trouble than they are worth." With the well-known standard steel forms on the market there is no danger whatever of a wall being out of plumb; we recently saw a thin wall (2½ in. thick) built to a height of 60 ft. with steel forms which, when tested, was not a quarter of an inch out from top to bottom. Shaped forms are supplied for circular structures, but there have recently been some interesting examples of the use of the ordinary straight form for curved surfaces. Circular structures with a diameter of 40 ft. or more may be built with straight wall forms without the fact being discernible to the eye, and quite presentable jobs can be made of smaller diameters, although probably at the expense of damaging the plates. A large number of circular structures of a diameter of 40 ft. and thereabouts have been built during the past year with the standard 2 ft. straight form.

Although it hardly comes under the heading of plant, a new process recently marketed in America for surface treating concrete may be mentioned. This takes the form of a "varnish," which is painted on the inside of the forms, and which acts on the cement with which it comes in contact, and prevents it from setting. It is claimed that the effect of the "varnish" penetrates to a fraction of an inch only, and has no effect whatever on the cement below that depth, and the result is that after the forms are stripped the cement may be brushed from the surface and the aggregate revealed.

In making pre-cast concrete, the power press has achieved a remarkable popularity, owing to the rapidity with which blocks and slabs may be produced. On the majority of these machines a "semi-dry" mix is used, and in their use the previous remarks as to the necessity for not having the mix too dry are of importance. The drier the mix the easier it is to handle the materials, the cleaner the work, and the greater the speed with which the pallets may be released, but if there is not sufficient water to hydrate the cement or to ensure that every particle of the materials is wetted, porous and weak blocks will inevitably result. The operator naturally prefers the dry mix, and it is therefore essential, either by the use of an automatic water supply or by careful supervision, to see that sufficient water is used. Another feature of some of these machines is that the specified pressure is given by a top plate descending a certain distance. If the mould box is not filled sufficiently high, the materials will not receive the full pressure, and it is thus advisable to mark the inside of the mould box to show the depth to which it is to be filled each time. If these precautions are taken, the pressure block and slab machine, either for hand or power operation, is a type from which maximum results may be obtained.

NEW IDEAS FOR SPEEDING-UP BUILDING

In the United States a variety of plant and devices are used, with more or less success, for the more rapid carrying out of building work. Very few of these methods are known at all in this country; fewer still are in use. Although the more useful of these devices are very widely used in the United States, so far only one or two of them are obtainable in this country through agents or otherwise. Some of these devices are illustrated and described herewith. Whether or not they will be economical to a contractor depends entirely on the volume of work done with them, as the more often they are used the less will be the proportion of their cost chargeable to each job. Most of them, however, are very strongly made, and a long life can be anticipated. Their chief claim to attention is the saving in

FIG. 1.

labour that can be effected with their use, while some of them also economise in materials.

The fixing of wood wall forms has received a great deal of attention, and there are on the American market a wide variety of devices invented with the object of dispensing with the many and expensive operations necessary to wire-up a wall form by the usual method. One of these is illustrated in Fig. 1. It consists of two wires welded at each end to a

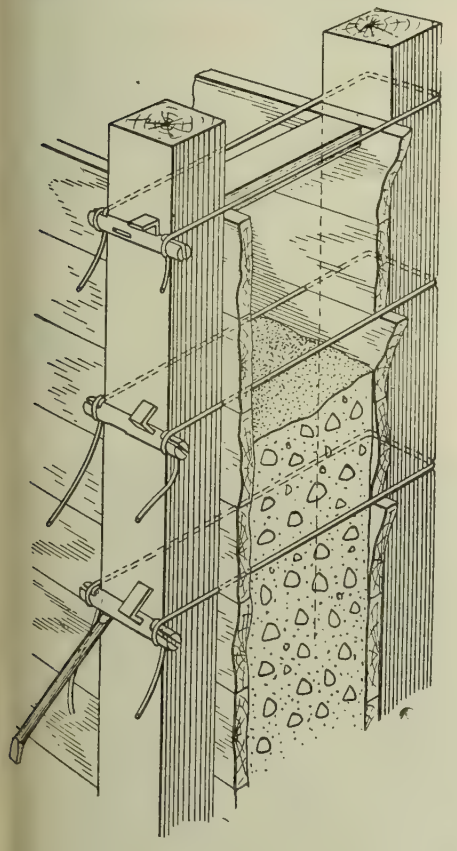


FIG. 2.

helix of wire that forms a nut for ordinary ½-in. diameter screws. The wires, as will be seen, act as spreaders as well as ties. The wire remains in the wall after the screws are removed. They are made in sizes up to 30 in., and have a working strength of 5,000 lb.

Another method is shown in Fig. 2. The

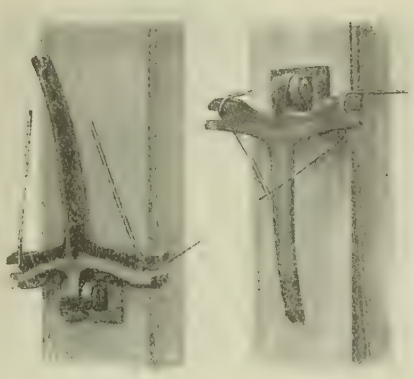

FIG. 3.—CLAMP OPEN. CLAMP CLOSED.

wire is passed around the uprights and through holes bored in the forms, and tightened by the clamps shown. These clamps are tightened by the turn of a handle, and are held in place when the wire is tight by the insertion of a piece of angle iron placed in a slot in the clamp and bearing against the post. Similar methods are adopted for wiring column forms, such as that shown in Fig. 3. The system needs no description; wires are passed around the column form and tightened by pushing down the handle of the clamp.

FIG. 4.

Another method of holding column forms in position is shown in Fig. 4. The steel arms are in two pairs and pivoted so that when they are applied the form is automatically squared. When it has been adjusted to the right size it is secured by dropping a nail or pin through the holes in the arms, and to release the clamp after the column is completed it is only necessary to knock out the nails or pins. An example of a clamp for a round column is shown in Fig. 5, and this could also be used for an octagonal column.

FIG. 5.

The steel band is 1½ in. wide. The band is adjusted to the size desired, passed around the column, and fastened by a wrench operating a ratchet in the steel frame.

Another operation that has received much attention with the object of reducing costs is the shoring of beams or other members during construction. The devices on the market for this purpose are practically all adjustable for any height of beam from floor level, and dispense with the operations, costly in material and labour, of cutting and wedging timber. One of these adjustable shores is shown in Fig. 6, and it is typical of them all. It consists of two vertical timbers with a concrete-filled pipe which slides between them. The shore is set upright beneath the beam,

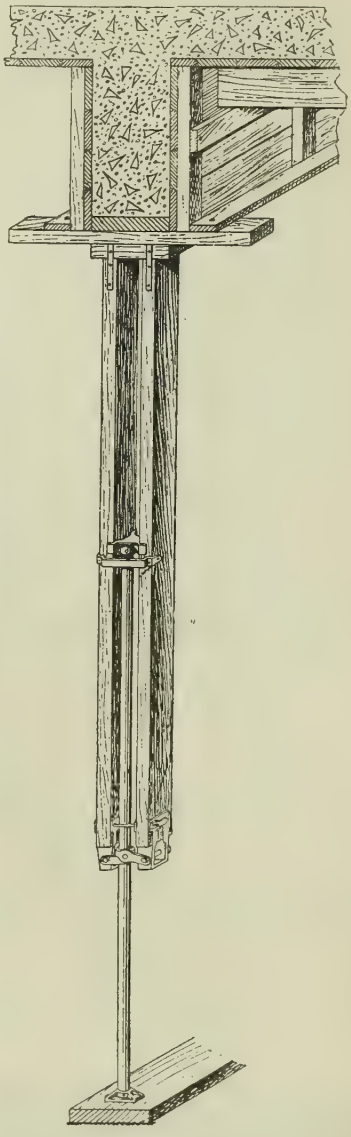

FIG. 6.

the timber portion raised to approximate height, and a final adjustment to correct height made with the aid of a jacking device slipped over the pipe. As the load is applied the shore is locked by heavy iron jaws automatically gripping the pipe. The shore illustrated can be handled by one man; it is adjustable up to 14 ft., and has a safe working load of 3,000 lb.

Dartmouth Housing Scheme.

It was stated at a recent Dartmouth Town Council meeting that the general foreman had reported that it was impossible to build the additional 22 houses on the Avery's Meadow site by direct labour, and consequently tenders had been asked for.

CAST STONE

ITS POSSIBILITIES AND ITS MANUFACTURE

ONLY a few years ago reconstructed stone was known as "artificial stone," and it suffered accordingly. No architect desired to see his design carried out in an "artificial" substance, whatever its merits in other respects. But the material has outlived this handicap of its early days; known as cast stone, it is being used to an increasing extent on important buildings throughout the world. When it is realised that cast stone is crushed natural stone bound together with Portland cement, and there is nothing artificial in its composition, it will be seen that this is the more correct description.

Reconstructed Portland stone is to be seen in Regent-street, Fleet-street, and other important London thoroughfares; it has just been used at the Natural History Museum, South Kensington, to match existing terra-cotta; at the new Croydon Air Station over 200,000 superficial feet of cast stone with a granite face are being used; all the dressings on the new Devonshire Court in Piccadilly are in cast Portland stone; sculpture by several eminent sculptors has been carried out in cast granite and other stones.

While cast stone claims attention on the ground of economy, it is also interesting architects on account of the textural effects made possible by its use. The time when the so-called "rock-face" concrete block was the best known example of cast stone has passed; there are, fortunately, very few of such blocks now being made, for the manufacturers have realised that the material has its own legitimate possibilities of surface treatment without attempting to imitate others. The rock-face concrete block and its fellows are generally made of ordinary gravel concrete moulded against an iron face-plate which repeats exactly the same impression on every square foot or so of a wall surface, and because it is ordinary concrete the surface has the dull grey colour inseparable from ordinary Portland cement.

Cast stone is a vastly different material so far as appearance and texture are concerned, although the principle of manufacture is the same. Its surface shows the material of which it is composed throughout. There is nothing artificial, nothing is hidden; rather, the true material is revealed. If crushed granite is used as aggregate, the surface resembles granite because it is in fact granite; if Portland stone is used, the cast stone resembles Portland stone; and so on throughout the whole range of natural stones.

In considering the possibilities of cast stone, it must be remembered that the dull grey colour and uniformity of ordinary concrete are brought about only because it is made in a mould, whether it be the shuttering for a wall or a mould for a small ornamental piece. If concrete be cut through it will be seen that the new faces thus revealed are totally different in appearance from the faces which were cast against the mould. The cut will be through stone and sand bound together with cement, and as there is generally from four to six times more stone-plus-sand than cement, the cut surface will consist of approximately 80 per cent. of stone. It is a characteristic of concrete making that a film of cement filters through to the faces cast against the mould, and completely hides the material of which 80 per cent. of the concrete consists. If this surface film of cement is removed, the material of which the concrete or cast stone is made is revealed, and this is the principle on which modern cast stone is made. The result is shown in Figs. 1, 2, 3, and 4, which illustrate cast stone made with different aggregates from which the film of cement has been removed and the surface treated. In Fig. 1 the film has been removed with an ordinary mason's chisel, leaving the same surface given to any stone when so tooled; Fig. 2 has been similarly tooled to give a ribbed surface, again with ordinary mason's chisels; Fig. 3 is made with marble chippings as aggregate and polished smooth in the same way as marble; in Fig. 4 the cement has been removed by scrubbing with acid.

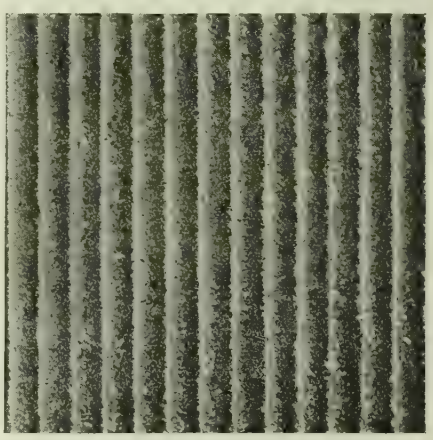

FIG. 2.—CAST PORTLAND STONE WITH TOOLED RIB SURFACE.

Materials.

It will be obvious that successful cast stone results primarily from the right selection of materials. The size of the aggregate depends upon the method to be used for treating the surface. If scrubbing is resorted to, the material may be of practically any size, as shown in Fig. 4. If the surface is to be tooled, however, it is essential that the aggregate should be crushed fine, as if it is too large it will not be easy to work. As a rule, anything that will not pass a ¼ in. ring is unsuitable, as the hammering of the chisel will dislodge individual pieces of stone and leave unsightly holes, or the stones may split at wrong angles under the chisel. The use of a fine crushed stone is a necessity, but care must be taken that it does not contain any considerable proportion of very fine dust which would dust off from the surface on exposure. The necessity to use fine material at the same time results in cheapening costs, as it permits of stone chippings, practically a waste product of the quarry and stonemason's yard, being used.

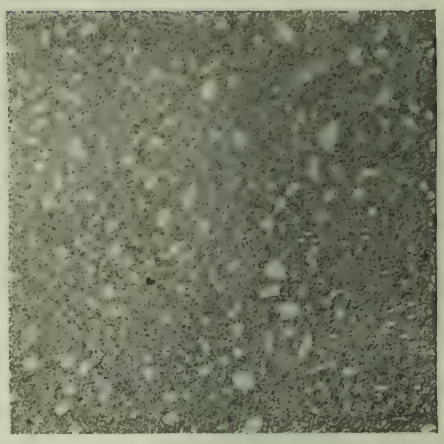

FIG. 3.—CAST MARBLE WITH SMOOTH STONED SURFACE.

Colour is, of course, a very important factor in good work, and the whole of the ingredients have to be considered in relation to the desired effect. Thus good cast Portland stone cannot be made with crushed Portland stone, red sand, and grey cement; to get the best result, it is necessary to use crushed Portland stone, with a proportion crushed to fine sand (or the whole crushed to the size of sand), and white Portland cement. No light-coloured stone can be made satisfactorily with ordinary Portland cement, the grey colour of which will detract from the finished appearance. Grey cement may be used more or less satisfactorily for darker stones, but generally speaking it is essential to use white Portland cement if the best results are to be obtained. If an analogy may be drawn between cast stone and paint, it may be said that as a white basis is essential for colour

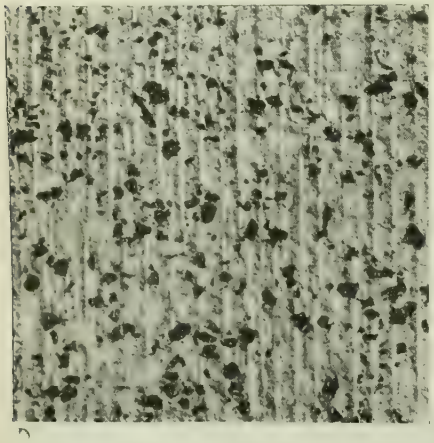

FIG. 1.—CAST GRANITE WITH TOOLED FACE.

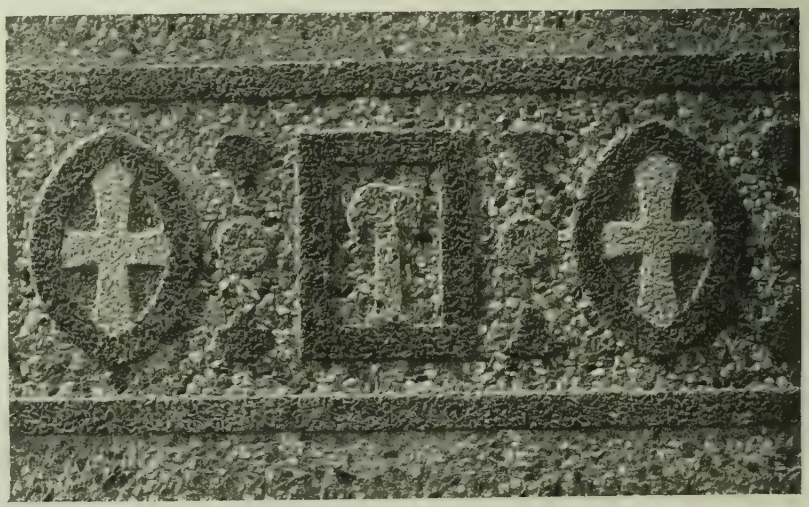

FIG. 4.—PART OF FRIEZE IN A CHURCH AT WASHINGTON.

[The whole of the interior of this Church is decorated with coloured concrete. Aggregate exposed by acid washing. The frieze is composed of river gravel for the background and crushed ceramics in different colours for the design.]

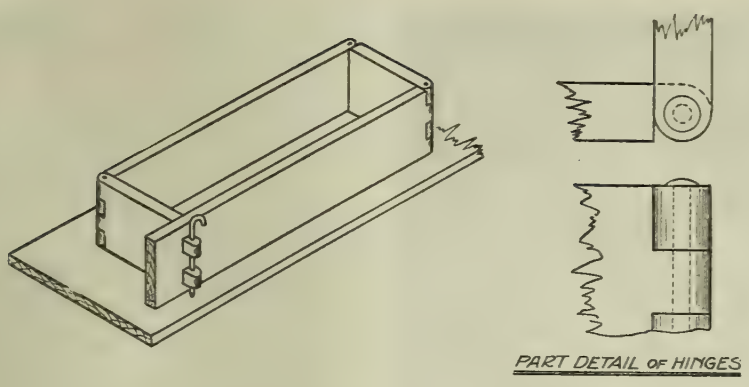

FIG. 5.—HINGED WOODEN MOULD FOR RECTANGULAR BLOCKS.

in paint, so is white cement essential as a colour basis for cast stone.

For certain stones the colour may be preserved by the use of cement coloured to the same shade as the stone. These coloured cements may be obtained from cement manufacturers in considerable variety, or the cement may be coloured at the works by the admixture of mineral oxides obtainable from firms who specialise in these colours. If the latter course be adopted, the colour should be obtained from reputable firms who specialise in the material, as if the proper mineral oxides are not used the concrete will be weakened.

According to the colour of the stone, so must the sand be selected if the stone is not used for fine aggregate as well as coarse. For instance, red sands are suitable for use with red stones; for light granite, white silica sand, which has the same sparkling appearance as granite, should be used; for Portland and other light-coloured stones, white or very light sands should be used. Certain sands by themselves will produce excellent effects, such as the silica sands, which closely resemble granite when made up as stone and tooled.

It has been stated that the material must be crushed fine in order to avoid pock-marking under the mason's chisel; for the same reason, it must be well graded and thoroughly consolidated to produce a dense and hard surface on which the mason can work. Usually 2½ parts of sand or crushed stone to 1 part of Portland cement will be suitable. The water content must not be stinted, for cast stone suitable for tooling cannot be made with a dry mix. In many works, water is added until the mix is no stiffer than cream, and the decreased strength which follows the use of so much mixing water is compensated for by the richness of the mix. When it is possible to use a drier mix, and at the same time run the concrete into every part of the mould and thoroughly compact it, less water may be used, but this is seldom possible in architectural cast stone manufacture owing to the detail of the mould and the sharp outlines and arrises called for.

Methods of Manufacture.

The stone may be cast in several types of moulds, such as sand, wood, plaster, glue, iron or steel, concrete, &c., the type of mould being selected according to the shape of the stone or the quantity to be made of the same shape. Whatever the material used for making the moulds the greatest care must be taken in their construction, as the result will depend entirely upon the quality of the moulds providing the selection of materials and other operations have been properly carried out. We recently saw a number of copings, 6 ft. long, made in wood moulds, with unsightly bulges due to the sides of the mould not being sufficiently strong, and giving at the middle when the concrete was rammed into them. It is better to waste a little material and have the moulds with a big reserve of strength than to skimp them and risk them becoming distorted or warping when in use.

Moulding cast stone in sand is practically identical with iron moulding. Moulding sand is rammed around a model, or pattern, which is then removed, and the space it occupied filled with concrete.

Iron moulds are most useful for repetition work on which they can be used many times over; the constant renewal of even wood moulds is an expensive matter, while iron moulds are practically indestructible. Iron moulds are made by iron founders specialising in the manufacture of light articles, and are produced from patterns made from a model or template.

Plaster and glue moulds are only used for special pieces, or when only one or two are required, and have a very short life. A model of the desired shape is first made in clay or plaster, and around this hair plaster is run in sections so that each will withdraw freely from the model when the plaster cast is completed. As these sections are built up a strip of greased paper is generally placed between each so that adjoining sections will not adhere to one another, and these are removed when the cast is complete. The cast is then taken down section by section and thoroughly shellaced on its inner face and on all adjoining edges to prevent the concrete adhering to it when it is poured; as a further precaution the inner face is generally rubbed over with a paraffin rag. The sections of the cast are then reassembled and held in position either by a surrounding jacket of plaster of Paris or by assembling them in a box, and the concrete poured into it through a hole in the top. Air holes are bored through the mould at suitable places to permit the air to escape from the interior as the concrete is poured, and these are stopped with putty when the concrete reaches their level and begins to ooze out.

The material generally used for moulds is wood, and where it can be used satisfactorily it is the easiest and cheapest material for the purpose. As with any material, an ample margin of strength must be allowed, and the mould must be so made that it will withdraw freely from the cast after it is made. For rectangular moulds some form of hinged sides and ends is the easiest to work; one method of hinging the corners is shown in Fig. 5, or the sides and ends may be fitted with ordinary butt hinges at the bottom so that they will fall downwards when the clamp at the top is removed. With either of these moulds a pallet is inserted in the bottom before the concrete is poured, and on this the casting is removed for curing.

Whenever shaped pieces are to be made it is advisable to make them in rectangular moulds whenever possible, the outline being obtained by the insertion of blocking-pieces in the mould. This is illustrated in Fig. 6, which shows how the outline of a cornice-like section is formed in a box with blocking pieces. The same principle may be applied to any other desired shape. It will be seen that in a mould such as this the casting may be released by withdrawing every part of the mould without rubbing or drawing over the concrete and the consequent risk of damage and broken arrises. This is particularly important when the castings are made of a fairly dry or semi-dry concrete, and it is desired to release the mould as soon as the casting is made. The speed with which moulds may be released is an important factor in making any kind of concrete product or cast stone when a large number are required, as most moulds are fairly expensive to buy or make, and the sooner they can be released the fewer will be required.

For circular objects wood moulds are made in strips tapered on each side so that they form a circle when fitted together. A typical method of making a wood mould for a round

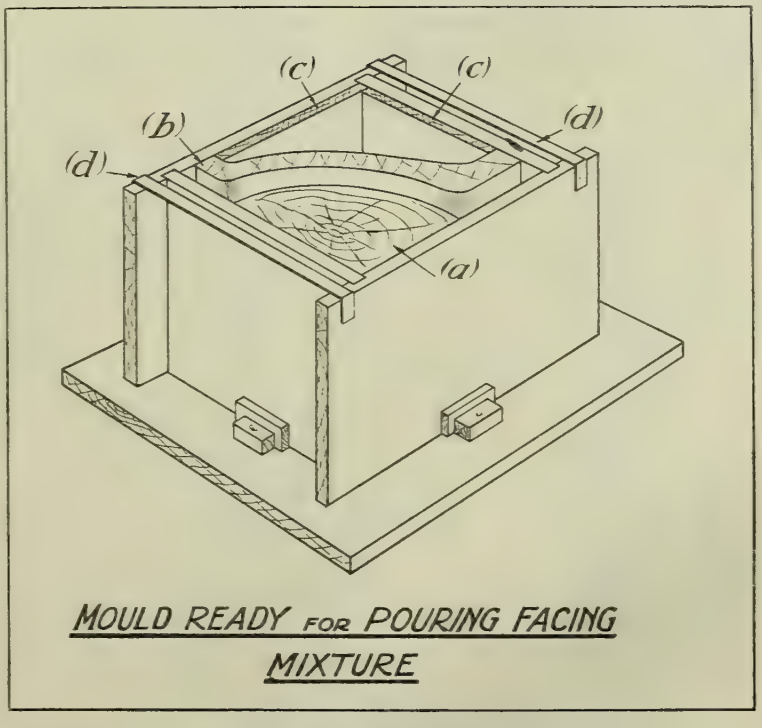

FIG. 6.—MOULD FOR FACED PIECES.

[For illustration a cornice-like section is used. (*d d*) are iron straps for holding the box together; (*a*) is a shaped block of wood to give the hollow; (*c c*) are pieces of wood to hold to dividing piece (*b*) in position. The facing is poured first, the dividing piece taken out, and the backing then poured.]

column is shown in Fig. 7, which needs no description. Making moulds for cast stone calls for considerable skill, and time and trouble spent on them is well repaid in the finished article. The essential point to be borne in mind is that every part of the mould must withdraw freely after the concrete has been poured, and this, especially when the piece has a considerable amount of undercut ornament, may often mean that the mould must be made up of twenty or thirty different pieces. If circular objects are to be made in two-piece moulds it is essential that the joint should be exactly central, as otherwise only one section will draw; it is generally better to make circular moulds in three sections.

Precautions must be taken to prevent wood moulds from warping and getting out of shape with use. They should always be soaked in water for at least twenty-four hours before use so that they will not absorb moisture from the concrete which is necessary for the hardening of the cement. To prevent the concrete from sticking to the moulds, the working faces should be coated with mould oil, or rubbed over with a paraffin rag. Each time they are used the moulds should be cleaned of any adhering concrete and oiled or rubbed with paraffin before they are used again.

If a wet mix is used the moulds can seldom be removed in less than three days if ordinary Portland cement is used; if rapid-hardening cement is used this period can be reduced to 24 or 36 hours, according to the weather conditions or method of curing. If the pieces are cured in the open or under cover without artificial heat they will be sufficiently hard for tooling in a further ten days, or fourteen days after casting, but this period depends upon weather conditions as concrete hardens quicker in warm, damp atmospheres than in cold or dry atmospheres.

If the surface cement is to be removed by scrubbing, this should be done as early as possible, and before the cement has thoroughly hardened. If the mix is semi-dry, it should be possible to carry out the scrubbing about twenty-four hours after casting, and the cement can then be easily removed with clean water. If it is necessary to leave the stone in the mould until the cement has set hard, clean water will not suffice and acid must be used. For this purpose a solution of one part of hydrochloric acid to three or four parts of water is used, taking care to remove all trace of the acid to prevent further penetration after the desired result has been achieved.

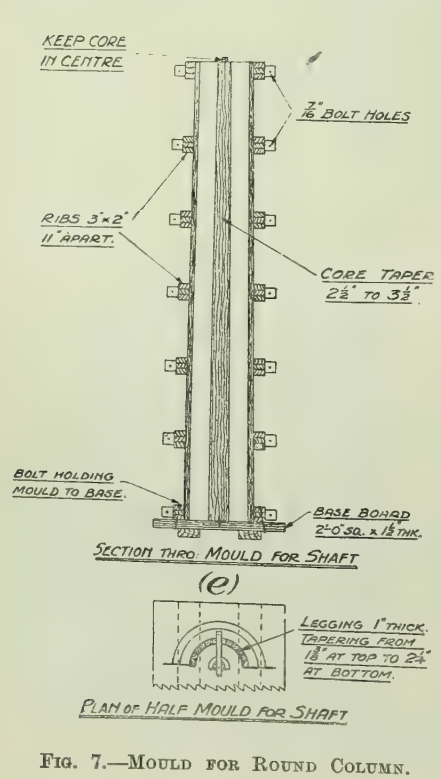

FIG. 7.—MOULD FOR ROUND COLUMN.

FIG. 8.—LION'S HEAD IN CAST GRANITE.

In some cases, faced blocks only are used; that is, blocks of cast stone made of two different materials—a special aggregate for the face and a backing of ordinary concrete. In this case a strip of wood is inserted in the mould, as shown in Fig. 6; the facing mixture is placed and tamped first, the strip removed, and the backing applied and tamped so that the two mixes form one monolithic block. The same principle is adopted when a special face is applied to a concrete wall. A sheet of steel is placed vertically within the forms and held in position by distance-pieces. The two mixture—the facing and the backing—are then poured and the steel sheet raised so that the two concretes set together.

In these notes an outline of the process of making cast stone has been given. The process is not simple; after years spent on the work difficulties of colour and materials and methods of casting still baffle one; but it is full of interest and possibilities of improvement in mechanical processes and textural results. The manufacture and use of cast stone on an extensive scale started in America, and is rapidly increasing in this country as it becomes better known. It has been made long enough now to prove its durability; early troubles of surface crazing and discoloration have been eliminated so as to be practically negligible in the products of reputable firms. Not the least of the merits of the material is that it makes possible the use of stones which have hitherto been considered too soft for building purposes, although their colouring is good. Such stones, if crushed to sand and reconstructed with Portland cement, gain considerably in strength, and may be used with perfect safety while retaining exactly the same appearance.

The P.O. London Directory.

Messrs. Kelly's Directories, Ltd., of 186, Strand, W.C.2, have now published their Post Office London Directory for 1927, the 128th annual edition. The Directory is, as usual, simplicity itself, in the matter of arrangement and ease of reference, while there is a copious index. A street plan is included (scale 4 in. to the mile) and on the back of this is given a map of London and suburbs (scale 1 in. to the mile), extending in some directions to twenty miles from Charing Cross. The price of the Directory is 55s., and there is also a special edition of it, printed on thicker paper and bound in leather gilt, at the price of 70s.

(For rates of wages in the Building Trade in Scotland, see page 104.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

JANUARY 17.—**Devon (Northern Division).**—MATERIALS.—Tarred macadam, gravel and sand, refined tar, bituminous compounds, for the C.C. R. M. Stone, County Surveyor (Northern Division), 9A, High-street, Barnstaple.

ESTIMATING ON RIGHT LINES

Everyone whose business it is to quote for building work should master the principles upon which estimating is based. These principles are clearly explained and illustrated in

'HOW TO ESTIMATE'

by J. T. REA,

a unique and invaluable work which is not excelled in thoroughness or in scope by any similar book known.

Fourth edition (now ready). 540 pages. Price 15s. net (by post 15s. 9d.). Containing thousands of prices and hundreds of examples of analysis, showing how a builder can make up rates for himself. In view of the difficulty of fixing standard prices under present conditions, the author has included an important series of Adaptation Tables and Percentages corrected to February, 1926), *which show how rates may be adjusted to meet variations at any time.*

Before purchasing any other book on this vitally important subject, you are invited to inspect this—the standard work which is in use by over 30,000 builders.

A COPY WILL BE SENT BY RETURN, AND YOUR REMITTANCE REFUNDED IF THE BOOK DOES NOT SATISFY YOUR REQUIREMENTS.

B. T. BATSFORD, LTD.

Publishers, 94, High Holborn, London, W.C.1

JANUARY 17. — **Staines.** — MATERIALS. — Road materials (including tarmacadam, macadam, chippings), &c., gravel, washed shingle, sand and hardcore, tar and tar compounds, for the R.D.C. D. C. Fidler, engineer and surveyor, London-road, Ashford.

JANUARY 17.—**Wareham and Purbeck.**—MATERIALS.—(1) Broken limestone, (2) fine and coarse gravel, for the R.D.C. A. Hunt, engineer and surveyor.

JANUARY 18.—**Plymouth.**—RAILINGS.—470 yards of wrot-iron railings, 5 ft. 6 in. high. J. Wibberley, Borough Engineer and Surveyor.

Lecter; two bungalows, Hawksworth, for T. B. Moseley and L. S. Hardman; bungalow, Hawksworth, for R. Sykes; residence, Alwoodley, for C. R. Butler.

WINCHESTER.—The Housing Committee of the T.C. have recommended (1) That the St. Giles' Hill site be appropriated for the erection of 40 cottages as shown on the lay-out plan, 28 of such cottages to have two bedrooms, and 12 three bedrooms; (2) that the existing 33 hutments be demolished as soon as other houses can be built to take their place; and (3) that the Council give the Committee authority to obtain by public advertisement tenders for the immediate erection of the said 40 cottages.—The Council has also agreed that negotiations be entered into with Cancellor and Sawyer with a view to appointment as joint architects for the new school at Stanmore.

WORCESTER.—The City Council have been asked to accept a tender for £6,317 for the improvement of Worcester Cattle Market. The full cost of bringing the market up to date, including roads, water mains, and weighing machines, is estimated at £9,825.

NEW BUILDINGS IN LONDON

Camden Town.—REBUILDING.—The Governors of the Royal Veterinary College are about to rebuild their premises in Great College-street, N.W.1. Sanction has been received from the Lords of the Treasury to a grant from the Development Fund of a sum up to £35,000 in aid of the reconstruction scheme. No architect or builder has been appointed.

Chelsea.—OFFICES.—The Great Western Railway Co. are to provide office accommodation at Chelsea Basin, S.W.3.

Denman-street.—THEATRE.—A new theatre is to be built on a site in Denman-street, W.1, opposite the Regent Palace Hotel. The scheme is to cost £120,000 and Mr. Edward Laurillard has completed the financial arrangements in connection with the work.

Fleet-street.—PREMISES.—Messrs. Greenham, Ltd., have just carried out the demolition of 54, Fleet-street, E.C., where new premises are to be erected for the Marcus Estates, Ltd. Messrs. Trehearne & Norman, of Windsor House, Kingsway, W.C.2, are the architects.

Ilford.—ALTERATIONS.—Alterations to premises in High-road, Ilford, are being done by Messrs. Gaze & Sons, Ltd., for Messrs. H. A. White & Co. Messrs. Carter & Young, AA.R.I.B.A., of Kingston, are the architects. The constructional steelwork is by Messrs. Young & Co., 6, Queen Anne's Gate, Westminster.

Kingston-on-Thames.—WARD.—The Borough of Richmond (Surrey) and the Heston and Isleworth Urban District Joint Hospital Committee are inviting tenders for the erection of new ward block and other works at the Mogden Hospital. The architects are Messrs. Adams, Holden & Pearson, FF.R.I.B.A., 9, Knightsbridge, S.W.1.

Little Trinity-lane.—PREMISES.—New premises are now being erected in Little Trinity-lane, E.C., by Messrs. Trollope & Colls, builders, 5, Coleman-street, E.C. Messrs. Williams & Cox, 34, Henrietta-street, Covent Garden, W.C.2, are the architects for the scheme.

Oxford-street.—REBUILDING.—The last section of Messrs. Bourne & Hollingworth's premises in Oxford-street, W.1, are now being demolished. The builders are Messrs. F. G. Minter, Ltd., of Putney, and the architects are Messrs. Slater & Moberley, A. & F.R.I.B.A., of 46, Berners-street, W.1. The sub-contractors are the same as those for the first portion.

Thames Ditton.—HOUSES.—Messrs. M. Greenwood & Son, Ltd., Mordaunt-road, Harlesden, N.W.10, have purchased the Riversdale estate at Thames Ditton, which they propose to develop by erecting approximately 120 houses and bungalows on the site.

Watford.—MODERNISING.—The Metropolitan Asylums Board have approved the plans submitted by Mr. T. Cooper, Engineer-in-Chief, for the modernisation of Leavesden Mental Hospital, Abbots Langley, near Watford. Application is to be made to the Ministry of Health for their sanction to the scheme. The work is to cost £107,010, and no contracts have yet been let.

Wembley.—HOSPITAL.—The scheme for the erection of a new hospital at Wembley has now developed further by tenders being invited by public advertisements. The hospital will accommodate twenty beds. The architect for the scheme is Mr. H. Kenchington, A.R.I.B.A., of 44, Bedford-row, W.C.1. The hospital is to cost about £20,000.

Town Planning.

The Ministry of Health (Town-Planning Department) has issued the following supplementary list showing town-planning progress for the month ended December 31, 1926:—

Preliminary Statement approved (Stage II).

Gloucester.—Bristol T.C. (two areas).

Resolutions received (Stage I).

England.—Lancashire: Radcliffe U.D.C., Southampton: Eastleigh and Bishopstoke U.D.C. Sussex: Portslade-by-Sea U.D.C.

Wales.—Gramorgan: Cardiff R.D.C. (No. 6).

Northumberland and Durham Master Plumbers.

At the annual meeting of the Northumberland and Durham Master Plumbers' and Domestic Engineers' Association, at the Central Station Hotel, Newcastle, on January 7, Mr. G. A. Moore was unanimously elected President for the ensuing year. Other officials appointed were: Vice-president, Mr. Luke B. Scott; hon. treasurer, Mr. Robert Law; hon. secretary, Mr. Robert Kirkland; secretary and financial secretary, Mr. John C. Graham, junr.; while the following were elected to the general committee to fill vacancies caused by retiring members: Messrs. J. Graham, W. B. Aynsley, A. Watt, J. B. Bilton, and W. C. Sawyer. The annual dinner was held on the same date, and was attended by a large gathering of members of the plumbing and allied trades. Mr. Moore presided, and those present included the Lord Mayor of Newcastle, Councillor A. W. Lambert; the Sheriff, Councillor R. S. Dalgleish; Mr. W. F. Thacker, ex-President of the Institute of Plumbers; and Mr. H. Blackman, secretary of the National Federation of Plumbers.

Midland Bank Maps.

The Midland Bank, Ltd., has just issued a new edition of the maps of its own branches and those of affiliated banks. These maps are folded and bound in a cover of pocket size, and are prepared for the convenience of customers and the use of the staff. In addition to the principal map, covering the whole of the United Kingdom, there are numerous insets in which are indicated the detailed situation of branches in important provincial centres and districts, as well as large-scale maps of Central London and of London and the suburbs, showing not only the offices of the Bank, but principal thoroughfares, railway stations, and important landmarks.

World's Biggest Bridge.

A special train was used to transport from Darlington to Middlesbrough Docks two of the biggest bearings ever known to engineers. The bearings, which are 24 ft. square and weigh 300 tons each, will be shipped to Australia to hold a span 1,600 ft. long, of the Sydney Harbour Bridge, which, when completed, will be the largest in the world.

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Dundee.—IMPROVEMENTS. — The question of the construction of the east wing to the Caird Hall-square has been considered by a Works Sub-Committee of Dundee Town Council. It has been mentioned that the cost of the entire central improvement scheme at the Caird Hall and neighbourhood will be between £300,000 and £500,000.

Aberdeen. — HOUSES. — The Housing Committee of the Town Council recommended that the scheme for the erection at Hilton and Cattofield of 1,000 houses be proceded with. The average cost per house has been worked out at £391 5s. 4d.

Cockburnspath.—IMPROVEMENT.—The Eastern District Committee of Berwickshire County Council has reported that the scheme for the alteration and improvement of the Tower Bridge and roadway at Cockburnspath will involve an outlay of £24,000.

Portobello. — EXTENSIONS. — A Provisional Order is to be promoted by Edinburgh Town Council in connection with extensions and improvements at Portobello Electric Power Station. One of the proposals is the construction of a pier to carry outlet pipes, and provision is also to be made for a bathing pond. The total cost of the scheme is estimated at about £100,000.

Glasgow. — INFIRMARY. — At the Glasgow Royal Infirmary meeting it was mentioned that plans were being prepared for the erection of the auxiliary hospital at Canniesburn which is to be used as an annexe to the Royal Infirmary.

Edinburgh.—SCHOOL.—The Edinburgh Merchant Co. Education Board has decided to acquire Merchiston Castle School and its boarding houses and playing field, and it is estimated that the cost of the new school, including the site and the alterations and extensions necessary will amount to approximately £200,000. The present Merchiston Castle School will be used as a junior school, accommodating between 500 and 600 pupils, and a new school is to be erected on the playing field to accommodate about 900 pupils.

Obituary.

The death has occurred of Mr. James Masterton, builder, at Rowanbank, Biggar.

Edinburgh Stained Glass for America.

An American visitor, who has been attracted by examples of church stained glass in Edinburgh by Mr. James Ballantine, F.S.A., has commissioned him to design and execute a large three-light window for St. Michael's Church, Milton, Massachusetts, U.S.A.

Memorial Window to the late Duke of Buccleuch.

The Bishop of Edinburgh has dedicated two windows in St. Mary's Episcopal Chapel, Dalkeith, to commemorate William Henry Walter, sixth Duke of Buccleuch, who died in 1914, and Walter Henry, Earl of Dalkeith, who was killed while shooting at Achnacarry, Inverness-shire, in 1886. One window has a portrait study of the late Duke in the robes of the Order of the Thistle, and the other window depicts the late Earl of Dalkeith in the uniform of the Royal Company of Archers. Mr. A. K. Nicholson, of London, prepared the windows according to the style of mediæval glass.

Bronze Age Cairn in Dumbartonshire.

A discovery has recently been made by workmen near Bowling, Dumbartonshire. In the course of digging, they disclosed a circular area, obviously artificial, covered by a setting of rough stones, when it became clear that the remains were the foundation of a round cairn of the Bronze Age, probably some four thousand years old, and long ante-dating the Roman fort on the Antonine Vallum situated a few hundred yards to the south-east. The central stone structure has a diameter of 41 ft.; but the sacred area apparently extended to a diameter of 60 ft.

BUILDING TRADE WAGES IN SCOTLAND.*

THE following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Labourers—Masons', Bricklayers', Plasterers'.

TRADE NEWS

New Asphalt Yard.

Messrs. W. Smith, Stodart & Son, the old-established asphalt contractors, have opened a new yard at Deptford to cope with their increasing business on the south side of the river.

Architects' and Builders' Stationery.

Messrs. J. C. King, Ltd., of 42, Goswell-road, E.C.1—a firm who specialise in architects', surveyors' and builders' stationery—inform us that their list "No. 60," fully illustrated and devoted to all requirements in the way of stationery for the profession and trade, is now in the press, and will be ready in about four weeks' time. Any reader requiring a copy should send a post card to the above firm, naming list "No. 60."

Partition Bricks.

The whole of the sanitary fittings used in Messrs. Wrigley, Jr., & Co.'s new factory at Wembley (illustrated in our issue of Jan. 7), and also the partition bricks which were of the registered "Shepwood" type, were supplied by the Leeds Fireclay Company, Ltd., of Wortley, Leeds.

New Brick and Tile Showrooms.

Messrs. W. T. Lamb & Sons are shortly opening extensive new showrooms at 43, Shoe-lane (Holborn-circus), E.C.4, where facing-bricks, tiles and slates have been built up to assist architects and builders to visualise better these materials in the work. Practically every type of brick and tile is shown, and the firm is to be congratulated on its enterprise in providing so useful a display. Fireplaces have also been built of their "Antique" briquettes, and we understand that a catalogue of fireplace designs suitable for constructing with these briquettes is in course of preparation. All interested in building should make a point of visiting these showrooms.

Concrete Mould Oils.

Of interest to trades engaged in concrete building are the two qualities of concrete mould oils manufactured by Messrs. Sterns, Ltd., Royal London House, Finsbury-square, E.C.2. Sterns' "Glycetol" concrete mould oil is a light pale oil which ensures a smooth even surface to concrete work, as it prevents the concrete adhering to the shutterings, moulds, &c. This grade is particularly suited for the rougher types of work, such as large sea walls, retaining walls, &c. Sterns' "Cretol" stainless mould oil is absolutely stainless in use. It leaves an absolutely clean white finish on the removal of the shutterings or moulds. Readers who are having difficulty with their concrete shutters or moulds should apply to Messrs. Sterns, Ltd., who will be glad to give them information and advice.

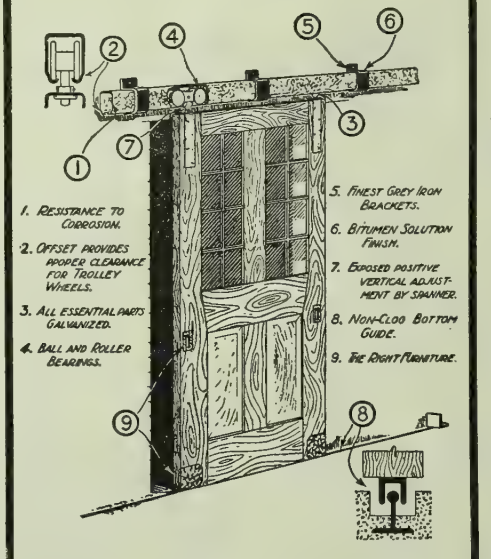
A Flood-Lighted Church Interior.

The system of lighting installed in St. Cuthbert's Church, Philbeach-gardens, S.W.5, is indicative of the increased demand for electricity for church lighting. Details of the installation are of interest. Ten "Gecoray" floodlight projectors, each equipped with 200-watt white Osram gas-filled lamps, illuminate the nave, being fixed at clerestory level, about 40 ft. from floor level. The chancel, reredos, and Lady Chapel are similarly illuminated. Illumination of the aisle is by ten similar but less powerful units, employing 100-watt white Osram lamps, five being fixed on either side, at about 24 ft. from floor level. Though a flood-lighting scheme, it may be styled concealed lighting, as all the projectors point in one direction—away from the congregation—towards the chancel, and therefore are without glare, and far above the line of vision. The General Electric Co., Ltd., Magnet House, Kingsway, W.C.2, prepared the scheme, in collaboration with Mr. S. Theo. Puzey, P.A.S.I., M.R.San.I.

Watertight Fittings for Incandescent Electric Lamps.

This specification (No. 97—1926), which is a revision of the 1920 edition, applies to fittings of the Bulkhead and Well-Glass Types for use in conjunction with British Standard Lamps (B.E.S.A. Specification No. 161), having an overall length not exceeding 150 mm. and 140 mm. respectively. The General Clauses deal with the material, finish of material, wire entry, earthing screw and lampholder, whereas the Sectional Clauses deal mostly with dimensions, packing rings and gauging. The general construction is now left in the hands of the manufacturer, who can thus work to his own design within the limits imposed by the dimensions necessary for interchangeability. These dimensions are clearly shown on a series of drawings covering several types of bulkhead and well-glass fittings.

Copies of this new Specification may be obtained from the B.E.S.A. Publications Department, 28, Victoria-street, S.W.1, price 2s. 2d., post free.



Mersey Tunnel Scheme.

The Liverpool Finance Committee, who have received from the Ministry of Transport an intimation that no additional money from the Road Fund will be available for the Mersey Tunnel scheme, is said to have recommended the City Council to petition against Birkenhead's bill. The Birkenhead representatives on the Mersey Tunnel Joint Committee have given comparative figures showing the relative costs of the Woodside, Rendel-street, and Pool-street proposals for the Birkenhead entrance to the tunnel, in which they point out that the cost of constructing an entrance at Woodside, according to one design by Mr. J. A. Brodie (one of the joint engineers), would be £1,131,260, as compared with £1,174,000 for the proposed entrance at Pool-street, and £990,000 for the works at Rendel-street. "If the question of costs is to be the determining factor," they state, "the Birkenhead Corporation have no difficulty, within the limits of deviation to be authorised by the present bill, in providing an adequate entrance at a cost approximately equal to that for the 'inadequate' proposal for Woodside."

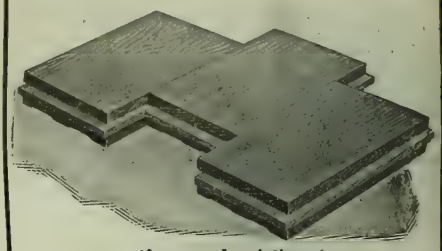
British Standard Specifications.

The British Engineering Standards Association has just issued five new British Standard Specifications for Red Oxides of Iron for Paints, Zinc Oxide Oil Paste for Paints, White Lead and Tinted White Lead, Ready Mixed Paint, and Extra Hard Drying Varnish. They contain clauses regulating the composition, together with standard reception tests, for the purchase of these materials, together with appendices giving methods of carrying out the tests. These specifications have been prepared at the request of the paint manufacturers by a committee representative of both the buying and manufacturing interests, and as in the case of all British Standard Specifications, they will be reviewed as experience of their working or progress in the industry renders it necessary, and revised issues will be published from time to time. Amongst other specifications in hand which will be published as completed are the following :—Red Oxide of Iron Paste (Class 1 and 2), Lead chromes, Prussian blues, Lithophone, Lithophone Oil Paste, Carbon Black, Gold Size, Zinc Oxide and Tinted Zinc Oxide, Ready Mixed Paint.



Copies of these five new specifications (Nos. 261, 262, 272, 273 and 274–1926) can be obtained from the B.E.S.A. Publications Department, 28, Victoria-street, S.W.1, price 2s. 2d. each, post free.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXII.—No. 4381. JANUARY 21, 1927

THE INSTITUTE COMPETITIONS

THE large number of drawings on view at the Institute recall some of the better days of the student competitions. After all, the winning of a prize in these essays is not necessarily the most valuable result for the student. The effort to do one's best may be stimulated by competition, and doubtless in most cases it is so, but a genuine and whole-hearted endeavour to produce a good design or drawing cannot fail to be a benefit. It is also of interest to see how others treat a subject which we have made our own, and to face something of the criticism which inevitably awaits all constructive and artistic design. The Tite prize has again elicited something of the refinement and good proportion which give the classic renaissance so worthy a place in the world's architecture. The Bossom prize is awarded for a theatre design which, if not impeccable in the matter of building regulations, has very distinct merit of plan allied to a quite distinctively good elevation. In the Saxon Snell competition there is also a happy union of quality in both plan and elevation in the winning design. The winning designs in the Tite, the Bossom, the Grissell, and the Victory competitions are published in our pages this week and will, we imagine, be enough testimony to the general satisfaction which may be felt with the awards.

Those who remember the best work in former Pugin Studentship competitions will find it pleasant to see how two or three of the competitors stand about shoulder to shoulder with the best. We have had better results in the Measured Drawings, but some very good ones are to be found in this year's doings.

What we always look for in these competitive efforts is some evidence that the qualities which make really good architecture have been realised both in the design and drawing, and we may assuredly feel that we have some of this evidence in this year's competitions. Whether the better response to the competitions which has been received this year will be more convincing to those who doubt the value of these competitions we cannot say, but we feel sure if the contests are entered into in the right spirit they are a real good. Whatever the work we are engaged in we all know how valuable it is to have a definite goal in view.

It is the vacillating uncertain temperament that falls behind in the struggle for a successful life. We have often seen how much better a result has been obtained in a house design when some former work of good character has to be retained and harmonised than when one has to start with an absolutely clean sheet. So it brings us much more quickly and definitely into the best use of our powers when we have a defined and limited point of view. A theatre, a country belvedere, a great entertainment building, or a street frontage are all made easier subjects, and become more fairly balanced competition efforts when there are rigid limits within which one must work. We are inclined to think a better choice of some of the subjects for competition might be arranged, but we would not rule out all the subjects for a wide and ideal vision, as it is wise and right that youth should try its wings, as well as face with study and care some of those practical problems which are likely to form the bulk of actual practice.

Much might be said of the admirable and encouraging work now on view at the Institute, and we wish it were possible to illustrate a great deal of it in our pages, for the number of those who can get to see the drawings is comparatively small. There are certainly none of the competitors who do not deserve some credit for what they have done, and we cannot find space to refer even briefly to all we should think worthy of some note. The Tite prize competition is certainly not a case of the first at top and the rest nowhere; even outside the hon. mentions there are quite noticeable designs. The Pugin could not be fairly estimated in its results by mere mention of the winner, for "Touche," "Astor" and "Gregory" rank high in the contest. The Measured Drawings prize has evoked some good subjects, well drawn. The drawings by "Edda," the winner, of the Guildhall at High Wycombe and St. Martin's, Ludgate Hill, show a sympathetic understanding of the value of the subjects with their delicate, careful delineation. The drawings of "Hunter," of Horham Hall, Thaxted, and of Bury Church, Sussex, are excellent, and so are the careful drawings of "Lot" of a number of interesting subjects. The Villa Acton, Florence, is shown in two capable coloured elevations by "Firenze." "Lotus" has some good drawings of Italian subjects, "Kiki" refined pencil drawings of the Town Hall, Liverpool, "Maryocas" drawings of Italian work, and "Tekel" good representations of good subjects. The Owen Jones prize-winner, "Discorde" (Miss Ellis), makes a brave show with a richly-decorated banqueting hall. In the winning design for the Grissell we note the winner "Sepia" has picked up something of the distinction of proportion and emphasis which has brought modern Swedish design into notice. The Godwin Bursary has become a sort of fighting ground amongst those who, though not strictly students, evidently wish to be students all their life. It is pretty obvious that the winner, Mr. Murray Easton, in his original and varied work, made the task of other competitors no light one; yet even the winner would find it difficult to beat one of the house designs by one of the defeated competitors. In view of the critical notes on the designs by Mr. Robert Atkinson, which are published this week, we will not particularise any further.

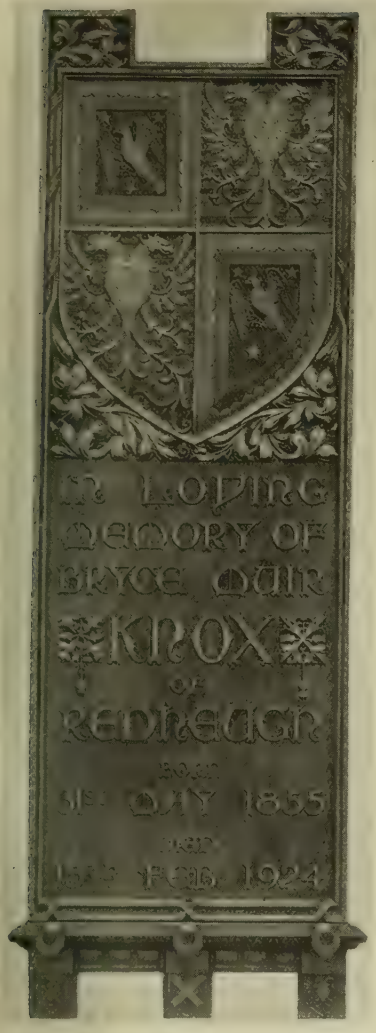
When we consider what this display of work by so many students means, not only as an output of sheer hard work, but as evidence of an appreciation of good architectural form and a sincere desire to express something of it in their life's work, we may well realise how important it is for the art of architecture that this effort and this desire shall be properly encouraged and rightly directed. We are glad to feel that a good deal, if not all, of the striving for mere eccentricity and for shouting display has disappeared, and whilst there is still lacking something of the spirit that can alone produce fine work, our students are surely on the way to realise that breadth, simplicity, refinement, reserve, dignity and sobriety must underlie all they do, and that leaves them a wealth of distinction which may be obtained by good outline and mass, beautiful proportion and distinction of detail.

NOTES

Architects and Industrial Disputes.

UNDER the chairmanship of Mr. E. J. Russell, a member of the American Institute of Architects, the National Board of Jurisdictional Awards has, during the past few years, had a great influence on labour questions in the building and allied trades in the United States. The Board was organised in 1919, and is representative of architects, engineers, builders, and operatives. Its functions are not limited to discussion and recommendation only. It is stated that the decisions of the Board on wages and matters in dispute between different craft unions have reduced the number of strikes in the building industry by 85 to 90 per cent. A recent report of the Board states: "If the Board is sustained and continues to function it is only a question of a relatively few years until there will be no such thing as a strike within the constructional industry." The report points out that the first meetings of the Board were of a somewhat militant nature, the stage being principally occupied with representatives of builders and operatives energetically putting their own points of view, but after a time the influence of the professional representatives was felt and discussions took place on reasonable lines, with a view to finding a way out of difficulties that would be acceptable to all parties. At the same time, the Board took a firm stand when certain sections were not amenable to reason. As an instance, in a recent dispute between carpenters and metal-workers as to who should hang metal doors, the decision of the Board in favour of the metal-workers was repudiated by the carpenters, who refused to agree to it. As a result the Board took such steps that the Carpenters' Union was expelled from the American Federation of Labour. The constitution and functions of the Board are on the same lines as those of the Building Trades Parliament that met in London a few years ago, with the exception that the professional element is much stronger and the body has executive powers; it appears, in fact, to be a governing body for the building industry on which all interested parties are equally represented, such as we have frequently advocated in *The Builder* as the best solution of industrial troubles.

The Law and Taste.



IT is not impossible to imagine a country where the law, in its ordinary course, took cognizance of good taste, good manners, and æsthetic principles; indeed, in special cases, such as the Town-Planning laws, a beginning has been made in this country. Nevertheless, the difficulties of introducing such a concept on general principles here are almost as great as those of visualising a fourth dimension. It demands a complete upheaval of all our preconceived notions, and would demand, for its successful application, a widespread knowledge of what good taste, good manners, and æsthetic principles were; otherwise, the law, even if perfectly administered, would appear to the public to be swayed by an unknown quantity of caprice. The trouble in a recent law case appears to have been that the law, instead of welcoming an opportunity of enforcing good manners, should have done so, under compulsion, "with great reluctance."

Design in Textiles.

THE influence of the art school on the style of commercial products, referred to in Mr. R. R. Carter's address at the meeting of the National Society of Art Masters, and his emphasis on technical production must not disguise from us that there is much yet to be done in improving the quality of design itself. How often in modern textiles, though not without evidence of improvement, do we not feel the want of distinction in design. All art has its "technical" side, and this solicitation about names should not concern us too much. It is the result that matters, and technical considerations if emphasised, apart from the necessity for an equal emphasis on quality of design, tend to divert us from the primary issue. Given fine design it will soon adapt itself to textiles or any other form of its application if granted the opportunity. The danger is that this emphasis on "technical art" is seen to lean towards standardisation, and we have in looking through students' designs at the schools had to observe this tendency. Co-operation between employer and employed, manufacturer and craftsman, must not only include this technical side made of use to interpret ephemeral and commercially-minded directions, but must include a better appreciation of the use to which our technical proficiency should be put.

New Parliament House, Helsingfors.

Bronze Panel on Bryce Muir Knox Memorial, New Cemetery, Kilbirnie, Ayrshire.
MR. JAMES HOUSTON, A.R.I.B.A., Architect.

Stained Glass.

IN the light of the fine instance of workmanlike approach by Mr. Anrep, whose address on mosaic at the R.I.B.A. we printed in our issue for Jan. 7, we may refer, on the other side, to the account in a contemporary of the unveiling of a stained glass window which was thus described: "According to the best style of mediæval glass"—whatever that may be. The meaning is, however, perfectly clear so far as we are concerned and represents that still-lingering survival from the worst features of "Gothic Revival" times. How dreary it sounds to us to be still advocating these stale inducements towards an obsolescent practice, so discounted to-day by the improvement of craftsmanship. An improvement due much more to a finer sense of service than any technical claims. How different is the atmosphere of Mr. Anrep's work in mosaic! And then to find it credited as a virtue that we should have so much lost trust in ourselves as to approve this mendicacy to the dead centuries. We see in Mr. Anrep's work an artist forging out his own experience and discovery, giving us a result portraying the freshness of his own vision and treatment, thus so far more truly executing his work "according to the best style" of mediæval mosaic. Such work shows us that to fall back on the past in merely imitative ways, untouched by personal feeling, is only to support our own lassitude and is the kind of craftsmanship we should leave behind. Those who are sometimes shocked at the efforts of the young experimenters and adventurers in art to-day, would be better occupied in being shocked that our churches should still be content with indifferent service to religion.

Rural Industries.

THE Development Commission of the Rural Industries Bureau has made a grant of £400 for the year 1927 to the Somerset Rural Community Council for the development of rural industries in that county. The Rural Industries Committee of the Council, which will be responsible for the work, has formulated a well-considered scheme including exhibitions at county agricultural shows, co-operation with the education authority for organising technical training, the formation of a County Co-operative Trading Society and sales depot, as well as enquiry into the economic possibilities of such crafts as flax preparation, potting, basketry, rabbit keeping for fur, and the various wood industries useful to agriculture. There is every reason to expect that good progress will be made. The headquarters of the Council are at 14, Hammet-street, Taunton; and the Secretary is Mr. O. W. Drew.

Quicker Building.

ALTHOUGH the material has only been on the market for two years or so, every builder is now familiar with the rapid-hardening properties of the new Portland cement. Made at first by one manufacturer only, its possibilities were at once realised by others, with the result that rapid-hardening Portland cement is now made by almost every cement manufacturer in the country. The demand has been remarkable. The output in 1926, in spite of the widespread industrial dislocation, was at least three times that of 1925. In 1927 it is highly probable that the 1926 figure will be trebled, for there is now a great activity in converting existing cement plant for the manufacture of rapid-hardening cement, while new factories are being built for its sole production. The opinion is, indeed, held by many cement manufacturers that it will not be long before the consumption of rapid-hardening cement exceeds that of ordinary Portland cement.

The Beethoven Centenary.

WE note that it is proposed to turn Bonngasse 20, the house at Bonn where Beethoven was born, into a museum of Beethoven relics and a library to contain all the literature that has been written about him. The house next door, where his godmother lived, is to be included in the scheme. In addition to this, designs were submitted for a monument by the leading German sculptors, but we understand that the designs were of too "modern" a nature to appeal to the public as an expression of the spirit of Beethoven. It is asking a good deal of a sculptor to expect him to do justice to this subject, and the alternative suggestion, to build a concert hall, has a great deal to commend it. It appears that Vienna, where Beethoven wrote most of his music, is to erect a great memorial concert hall, to seat 10,000, and that for this purpose a world appeal for funds is to be made. The date of the centenary is March 26.

Bryce Muir Knox Memorial, New Cemetery, Kilbirnie, Ayrshire.
MR. JAMES HOUSTON, A.R.I.B.A., Architect.

GENERAL NEWS

Professional Announcements.

Mr. Bernard Dicksee, F.R.I.B.A., late District Surveyor for Southwark, having relinquished his appointment, has resumed private practice, and has removed his office to 22, Portman-street, Portman-square, W. 1, at which address he will carry on a general and consulting practice as architect and surveyor.

Messrs. W. E. Davis & Son, surveyors, have removed to 6, Duke-street, Adelphi, W.C. 2. Telephone number remains as before—Gerrard 1382.

Messrs. George Hollins, A.R.I.B.A., and Reginald L. Jones, of Lloyds Bank Chambers, Newcastle, Staffs, have opened a branch office at St. John's Chambers, Longton, Staffs, and will be pleased to receive catalogues, samples, &c., at that address.

Architectural Association.

The general meeting arranged for Monday next has been unavoidably postponed until a date to be fixed later.

The Faculty of Architects and Surveyors.

Mr. H. B. Whitfield has been appointed to the vacant post of secretary to the Faculty of Architects and Surveyors, caused by the death of Mr. D. W. Caddick.

Exhibition of Modern British Architecture.

The annual exhibition of Modern British Architecture will be held at the R.I.B.A. from April 27 to June 3. All architects in Great Britain and Ireland are invited to send in not more than two works each. Particulars of the exhibition, together with instructions to exhibitors, may be obtained on application to the Secretary, R.I.B.A., 9, Conduit-street, London, W.1.

The Woolworth Building, Manchester.

Amended plans for Messrs. Woolworth's new building on the Piccadilly site formerly occupied by the Albion Hotel have been accepted by the Manchester Corporation Improvements Committee. The structure, as now planned, will be of five stories and 68 ft. high. Previous plans for the building were rejected because they provided for only three stories, and the committee thought the architectural balance of the square would be spoiled.

Developments in Building Methods.

Professor Reilly will deliver the inaugural Bossom Gift Lecture under the auspices of the Chadwick Trust, on Thursday, February 3, at 8 o'clock, in the lecture hall of the Royal Society of Arts, his subject being, "Developments in Building Methods." He will give an historical survey of building processes and materials in past ages of architectural achievement, and in our own day. Lantern slide illustrations of all periods will be shown. Admission to the lecture is free.

Damp Buildings.

Approval of the request of the British Medical Association for a committee of architects to assist in the inquiry into the causes of rheumatic diseases among children was given by the council of the Royal Institute of British Architects on Monday. The committee, it is understood, will consist of leading architects, including Professor R. Elsey Smith, and other members of the Science Standing Committee of the Institute.

Congress and Health Exhibition, 1927.

A public meeting to inaugurate the organisation arrangements of this Exhibition, to be held at Hastings from July 11–16, of which the Right Hon. Sir William Joynson-Hicks, Bart., is President, will be held in the Town Hall, Hastings, at 3 p.m., on Thursday, January 27. The Council invite papers on subjects relating to health and sanitary science, and will be glad to have early intimations from members proposing to offer papers. The invitation to appoint delegates to this Congress has been issued, and members are asked to assist in securing the appointment of delegates to the meeting and in making the Congress known.

Foundling Hospital Site.

Representatives of the City Corporation and many members of the professions and societies interested in the welfare of children met on Tuesday at the Rectory of St. Andrew's, Holborn, E.C., to initiate any possible action towards saving the Foundling Hospital site in Bloomsbury as a playground for the children of the area. It was pointed out in an informal discussion that over 6,000 children in the neighbourhood have no other open space on which to play, and strong opposition was expressed to the proposal that Covent Garden market should be moved to the site. It was agreed to form a committee to devise means of raising a fund for the preservation of the site.

Duveen Art Scheme Committee.

A Selection Committee has been formed to co-operate with Sir Joseph Duveen in his scheme for assisting lesser-known British artists. The function of the Committee will be to select the works worthy to be hung at the series of British Artists' Exhibitions which are to be inaugurated in March at Leeds Municipal Art Gallery. The following painters and sculptors have accepted invitation to serve on the Committee:—Sir William Orpen, R.A. (chairman); Mr. Philip Connard, R.A.; Mr. W. Reid Dick, A.R.A.; Mr. Jacob Epstein; Mr. Roger Fry; Mr. Augustus John, A.R.A.; Mr. Adrian Stokes, R.A.; and Professor Henry Tonks (Slade Professor of Fine Arts).

Roman Remains at Chester.

During excavations conducted at the rear of premises in Eastgate-street, Chester, important discoveries of Roman work have been made. Professor Newstead, of Chester, has been superintending the excavation work, and has brought to light the retaining wall of a large Roman building which extends for 258 ft. into Bridge-street. It is declared by the Professor to be a magnificent section of Roman work. It is probably part of a building which, in the first instance, was used as a school of instructors, and, at a later period of Roman occupation, as a lounge. He states that it was a double-colonnaded building, with an open court in the centre, with rooms, including baths, leading off it. The new discovery is a wall 3 ft. 9 in. thick and 14 4½ in. courses of masonry. It lies 11 ft. below the surface of land.

CORRESPONDENCE

The Recent Cottage Competition.

SIR,—The recent competition initiated by a well-known daily newspaper again illustrates the difficulties presented by what might appear to be an easy task in planning a fifteen hundred pound house.

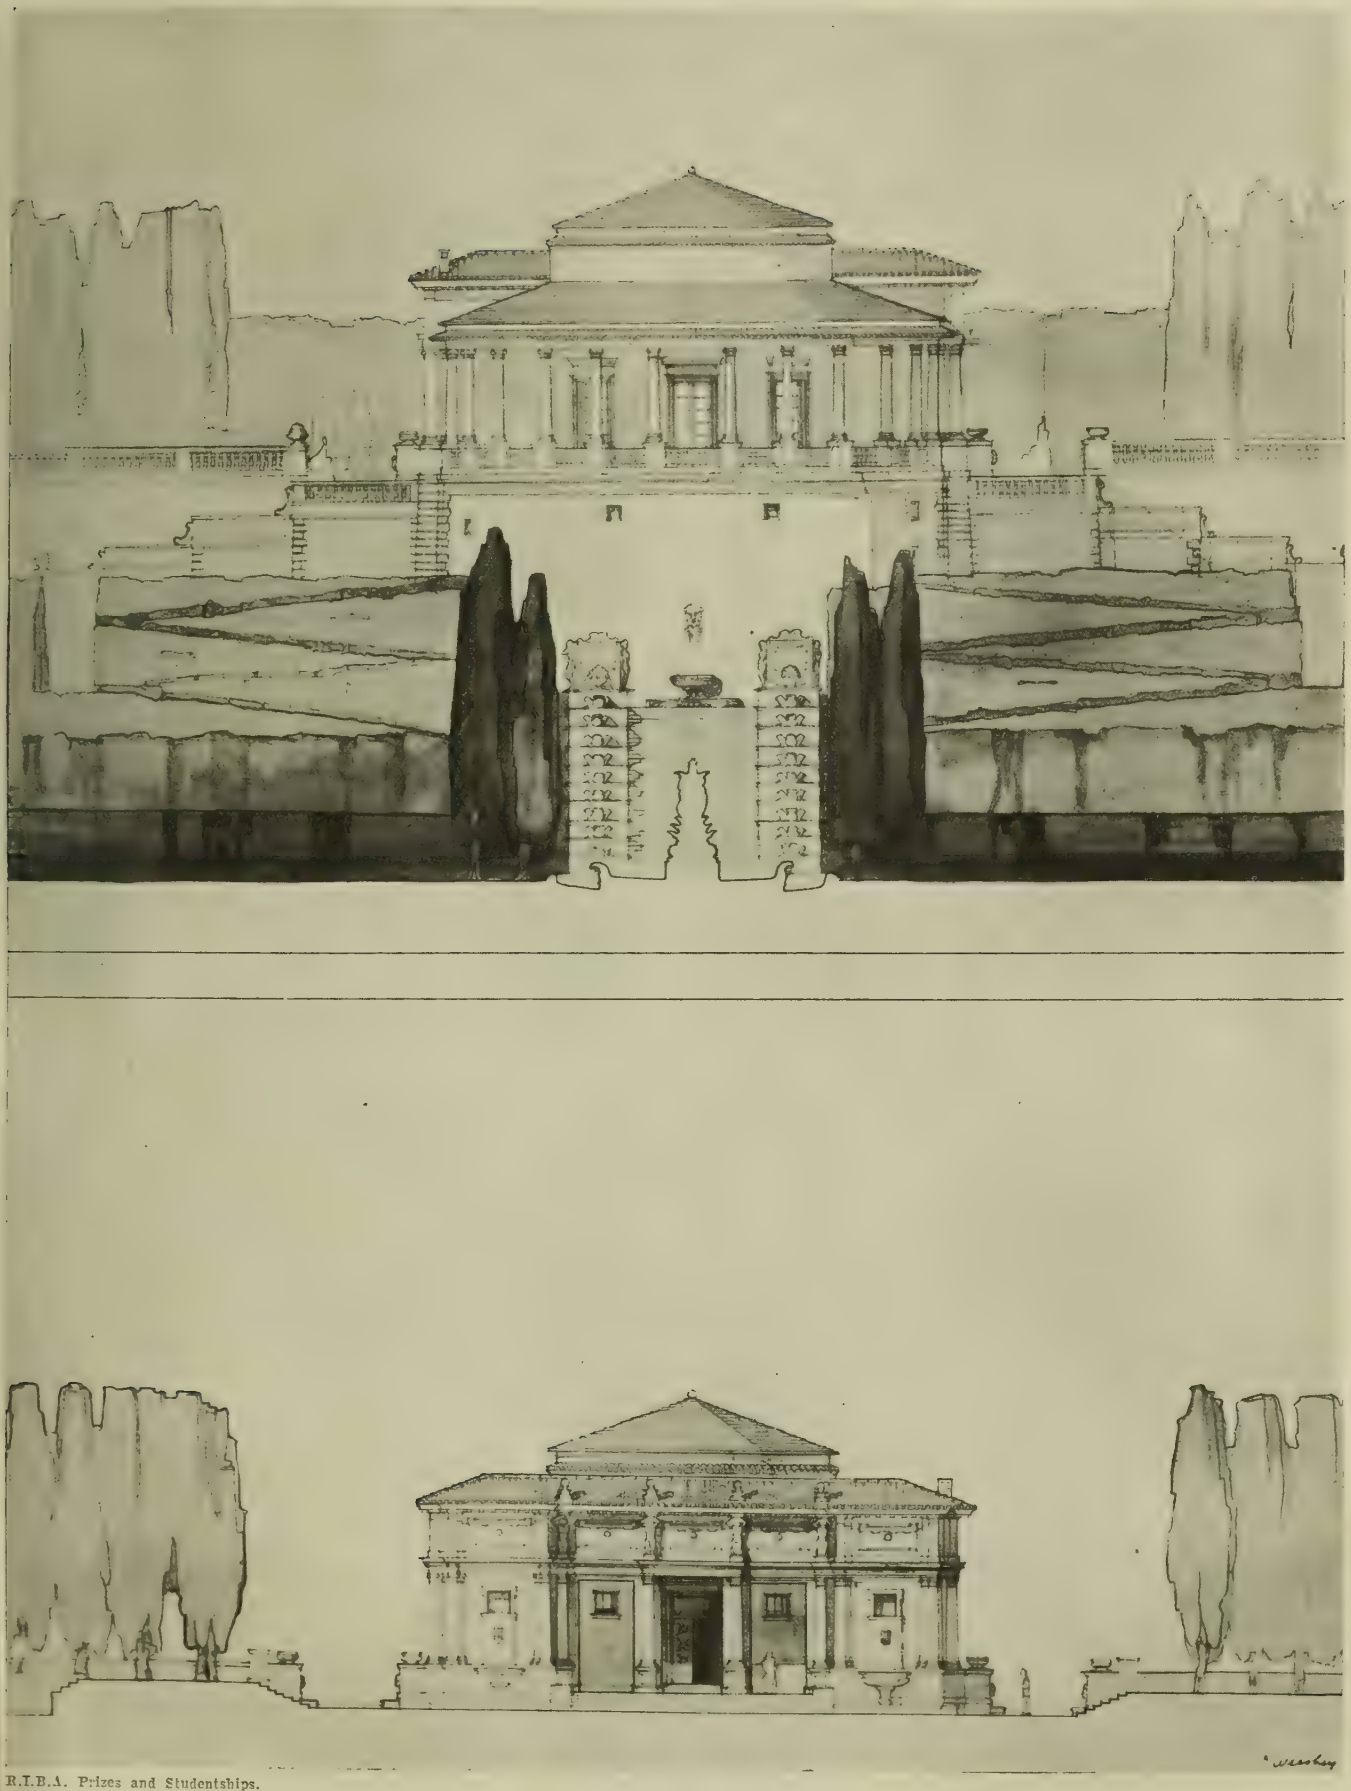
In the three plans premiated by the assessors no pantry is provided. No doubt the reason for this omission is the question of cost. It is reasonable to assume the owner of a fifteen hundred pound house would keep a maid. It is not reasonable to expect the maid to be bothered with the mistress constantly in her kitchen, washing the glass, crockery, or carrying out the many daily duties of a mistress, all of which work must be done in the kitchen of the three premiated plans of this competition.

The pantry is the key to the comfort of a small house, and without the provision of this particular apartment, no small establishment can be conducted on amicable lines. There is no reason why a pantry could not have been included in the successful designs of the competition that has been broadcasted to the country, and such pantry properly placed, so that the traffic could pass through to the kitchen. A pantry is of greater importance than a ground-floor lavatory. To wash up china, glass and silver in the sink that cleans the pots and pans is not good small-house design.

GILBERT FRASER, F.R.I.B.A.

COMPETITION NEWS

Leith Town Hall and Library.



The Corporation of the City of Edinburgh invite architects to submit in open competition designs for a hall and library which it is proposed to erect upon a site in Ferry-road, Leith. They have appointed Sir George Washington Browne, P.R.S.A., as the assessor. Four premiums are offered, and particulars and a plan of the site will be supplied after January 22 upon payment of a fee of £2 2s., returnable. Full details may be obtained from Mr. A. Grierson, Town Clerk, City Chambers, Edinburgh.

South Australian War Memorial.

On the recommendation of Mr. J. S. Murdoch, Chief Architect in the Commonwealth Department of Works, the State Government has accepted for its war memorial a symbolic design with figures of Youth and Duty, submitted by an Adelaide firm, which includes four architects, Mr. Woods, Mr. Bagot, Mr. Jory, and Mr. Laybourne Smith. The memorial is to cost £25,000. The competition was limited to South Australians, and 18 designs were submitted. The memorial is to be made of grey marble and white granite, and it will occupy an island site in the corner of Government House grounds in front of the North-terrace, near the King Edward VII Memorial.

COMPETITIONS OPEN.

	Particulars published in "Builder."	Sending in date.
Plan for construction of Conference Hall, for League of Nations, Geneva. International Competition, Sir John Burnet being British representative on Jury of Assessors.	**July 23**	**Jan. 25**
Civic Improvements, Birmingham, around Hall of Memory. International Competition. Premium of £1,000 will be awarded author of design placed first. Further sum, not exceeding £1,000, will be divided among other competitors according to assessor's recommendation. Scheme includes: Municipal Offices, to contain City Hall, Public Library, and Lord Mayor's Mansion House. Mr. H. V. Lanchester, F.R.I.B.A., assessor. Apply Mr. Herbert H. Humphries, City Engineer, Council House, Birmingham.	**Oct. 15**	**May 16**
Edwin Austin Abbey Memorial Scholarships for Mural Painting. Two Minor Scholarships of £125 a year each, and one Major Scholarship of £250 a year. Candidates must not be over 25 and 27 years of age for the respective Scholarships on December 31 preceding the competition. Apply Secretary, Edwin Austin Abbey Memorial Scholarships, Chelsea Lodge, 42, Tite-street, London S.W.3	**June 11**	**Feb. 1 and July 15**
Students' Union, Glasgow. Competition open to architects in practice in Glasgow. Mr. James Kennedy Hunter, F.R.I.B.A., assessor. Apply not later than January 26 to Mr. Robert Brough, Hon. Sec., Student Welfare Scheme, the University	Jan. 14	—
Shakespeare National Memorial Theatre, Stratford-upon-Avon. Competition open to architects of the British Isles and America. To be held in two sections: first, Sketch Designs, from which six will be selected, and the authors each paid £100 towards cost of preparing more detailed schemes, which will form second part of competition. Selected architect will be paid in accordance with R.I.B.A. schedule of charges. Apply Secretary, Shakespeare Memorial Theatre, Stratford-upon-Avon. Deposit, £1 1s. Assessors, Messrs. Robert Atkinson, F.R.I.B.A., E. Guy Dawber, P.R.I.B.A., and Cass Gilbert	Jan. 14	June 1 (Preliminary Designs)
University Buildings, Western Australia. To cost £150,000. Premiums: £400, £300, £200. Apply Agent-General for Western Australia, "Savoy House," 115–116, Strand, London, W.C.2, or Australian Trade Commission, 44, Whitehall-street, New York City, U.S.A.	Jan. 14	Aug. 2

R.I.B.A. Prizes and Studentships.

The Tite Prize. A Belvedere: Winning Design.

By Mr. Eric B. Cumine (Architectural Association).

R.I.B.A. PRIZES AND STUDENTSHIPS.

THE President, Mr. E. Guy Dawber, took the chair at Monday evening's meeting of the R.I.B.A., when Mr. Robert Atkinson reviewed the work submitted for the Prizes and Studentships, 1927. In the course of his remarks, he said the Institute was gratified at the splendid response (with two exceptions) of students in the various competitions of the year under review. As they were aware, some few years ago the competitions almost petered out. Since then the conditions had been brought up to date, co-ordinated into a ladder of progress, and modified to fit the stage of educational development of the competitors who were to be catered for, with the result that in all the really vital competitions the response had been all that could be desired. The general level of the work was good, although there was no work of outstanding ability.

Students' competitions were divided into several broad groups, which might be classed as study groups, experience groups, and testing groups. Of these the study group consisted of the Measured Drawing Medal and the Pugin Studentship. Both these were largely for able draughtsmanship combined with the selection of useful material. The Measured Drawings were well up to the standard of draughtsmanship; perhaps a little defective in the works selected in that most of the work had been measured before, but, on the whole, good. Three of the sets, at any rate, were any of them worthy of the prize, and the winning set secured the award after a keen competition.

The Pugin also was well contested, three of the sets of drawings being well up to the standard of previous years. The proper rendering of Gothic ornament was a great test of skilful and sympathetic draughtsmanship, more so by reason of the variety of ornament, than any classical subject could be.

The Grissell Medal was for experience—experience in construction—because construction was really experience and not draughtsmanship, although it was also design. Insecure construction was more valuable as a study than secure construction; what a student received at lectures was academic construction, which, without application or experience was valueless. A person was not very clever if he could construct a building so solid that it could not fail, but he was clever if he could construct a building so light that it just could not be blown down; in other words, what he meant was that only by experience could the minimum of constructional requirements be realised. You were not clever, only wasteful, if you used a 9 by 4 joist where a 5 by 2 would do. It was equally as necessary to study the jerry builder's methods as the other. Their construction would only be daring when it was the minimum, backed by positiveness. The Grissell was one of the disappointments, as there were only three entries.

The Henry Saxon Snell was a competition for experience—experience in hospital planning. Hospitals were in the hands of a few specialists, men who freely and generously imparted their experience to others. Most of these were on that jury. They awarded the prize. He did not pretend to know why; if his opinion was of any use, he agreed with them.

The Owen Jones was a side issue, and was one of the two disappointing competitions—not as to quality of work submitted, but as to quantity. Decoration was of vital importance to architects—look at the competition for work amongst West End firms. Dozens of students must have a bent for colour and decoration, yet few developed it. Colour and decoration needed progressive education, just as did other sides of architecture. They could not be good decorators by birth, but the stages of progress were accessible. There was such a lot of decorative work which a painter could not do, nor a sculptor; he meant the decorative scheme which was purely a selection of paint tints or colours put on by a workman; this was an architect's function, and when properly done gave probably a finer result than any type of decoration, because the architect considered the furniture, the carpets and curtains, and the ceiling and fireplaces as one scheme; who else could?

The design prizes were really the culmination of an architectural training, because good design included everything else—draughtsmanship, construction and planning. Training was everything in designing. There had been gifted individuals who with an "H" pencil frigged about on a sheet of paper long enough to produce patterns which passed as inspired elevations in exact ratio to the amount of lead pencil expended; but design was not lead pencil; design was largely brain; even good brains were valueless without order and procedure. The great business was built up of clerks and workers all responsible to someone above, until at the top was a man with absolutely nothing to do, because his underlings did it all. Design was the great business of the architect. He marshalled all his information, and limitations into groups, until the design appeared like the fellow at the top, with no apparent effort, and nothing to do. If the design was bad, the fellow at the top was so busy he had not time to think. Marshalling the facts and thinking in proper sequence were the greatest arts of design.

He had a bone to pick with almost all the designs submitted on this point. A programme was to be torn to pieces, dissected, re-tabulated and marshalled, before a line need be drawn. In the case of the Victory programme, for instance, only two students dissected it properly. All the others wasted their time. You did not place a fish shop in a milliner's establishment any more than you placed the elephants next to the bun shop. Yet this programme was simple as A B C: Public entrances, one block; auditorium, one block; dressing rooms and service, one block—all expressed separately and differently, not intermingled. Yet most competitors mixed them up hopelessly; obscured the rotunda with stable buildings, planned ornamental elephant houses, classical colonnades for monkeys. Where would you put such students? None of the designs in the Victory really pleased him. A circus was a place of amusement: one wanted to see posters, outside places for freaks to attract the public, a few gilded chariots, or such-like—an atmosphere of anticipation. The building should have ample approaches, wide encircling corridors, cloakrooms easily accessible at each level. An auditorium of tent-like form, a ring, not necessarily central or circular; cheap seats near the ring, then the best seats and boxes; above these the bulk of the seats; sighting should be good, access easy; not too many seats in a row, &c. Did any students, by the way, study the L.C.C. regulations as to theatres?—not more than 13 seats in a row, no tier steeper than 35 degrees. All these schemes had steep seats, many at an angle of 50 or 60 degrees. Seventy-five of the schemes were defective in sight lines, the near side of the ring being invisible. None of the schemes would be approved by the L.C.C.

The Tite Prize was a smaller problem, but not less difficult; a pavilion somewhat like the pavilion at Versailles, with a couple of servic rooms and a covered belvedere; perched o a ledge overlooking a fine view in three dire tions; obviously a loggia, bent inwards or ben outwards, according to the contours of the site The belvedere might have been on differen levels. It was essential that the building shoul be as near the edge of the cliff as possibl because of the view being downwards, and no obscured by projecting terraces. The plan nee not be symmetrical or the outlines severe; i fact, a picturesque silhouette would probabl harmonise with the surroundings.

Plans, except "Rough" and "Lemon, were very uninspired; rest of plans of tw types only, and there were too many duplicate vestibules. Buildings, as a rule, too solid—th dependencies could have been treated as wing to the main block.

On looking at the Bossom, one felt that th selection of a site might mar a design consider ably. The variety in these four schemes wa remarkable, and while two were too large, th other two were too small. In fairness to com petitors a more uniform system of site selectio should be followed. Theatre plans were a specia study and were amongst the most interestin problems an architect could tackle. No hard and-fast lines could be laid down for planning the problem of great capacity on a tight sit and the same capacity on a generous site mad totally different problems of the programme He was astonished that the Regulations as t theatres laid down by the L.C.C. were no more generally read by students; they were very valuable guides, and should be the firs reference by anyone attempting to desig a theatre.

[Mr. Atkinson concluded his remarks with a detailed criticism of each design.]

Discussion.

Mr. Maurice E. Webb, proposing a vote o thanks to Mr. Atkinson, said he did not agree with some of the things that he had said. He had been a little hard on some of the com petitors. Some of the programmes set were very difficult and could not have been grasped by the students. Some day he hoped to see the Bossom "wiped out," though he knew that they would not all agree with him in that. Having referred to the recent "reconstruction" of the R.I.B.A. Prizes, the speaker pointed out some of the beneficial results which had followed; this year, for instance, they had had over sixty men competing for the Tite. In his view, this year's drawings, generally speaking, were well above the average of drawings submitted for the prizes during the last few years. The speaker then suggested that some of the students present should give their views of the designs and, in conclusion, thanked Mr. Atkinson for the very interesting and careful notes that he had made.

Mr. Stanley Hall, seconding the motion, said that he also would like to hear the views of the students. They were lucky, he thought, to have Mr. Atkinson as critic. His remarks had been somewhat caustic, but by no means unkind.

The President, in putting the vote of thanks to the meeting, said Mr. Atkinson's remarks had struck him as being very dry, very pawky, and very Scotch, and they admired him for saying what was in his mind. His criticisms were sharp, but were not meant unkindly at all, and the students must have benefited by them.

Mr. Atkinson, in reply, said he thought that a critic in that position should be frank and direct. He hoped they would forgive him any unintentional hardness. If any of the students cared to tell him what they thought he would be very glad to hear them.

The Awards.

The annual award of Prizes and Studentships was as follows:—

THE TITE PRIZE AND £50 FOR DESIGN.

For the study of Italian Architecture. The subject set for this year was "A Belvedere." (64 candidates took part in the Preliminary Competition, and 15 were admitted to the

Final.) Prize awarded to Mr. Eric B. Cumine (Architectural Association). Certificates of Hon. Mention awarded to: Mr. E. B. O'Rorke (Architectural Association), and Mr. Donald H. McMorran, 34, Butler-avenue, Harrow-on-the-Hill.

The Victory Scholarship and £150 for Design.

The subject set for this year was "A Circus." (13 candidates took part in the Preliminary Competition, and 6 were admitted to the Final.) Prize awarded to Mr. H. T. Dyer, 30, Bernard-street, Russell-square, W.C.1. Certificates of Hon. Mention awarded to: Miss Joanna Macfadyen (Architectural Association), 9, Bury-street, Chelsea, S.W.; Mr. D. H. Beaty-Pownall (Architectural Association), Weyside Lodge, Thames-street, Weybridge; and Mr. R. P. Cummings (Architectural Association), 73, Boundary-road, St. John's Wood, N.W.8.

The Royal Institute Silver Medal and £75 for Measured Drawings.

(Seven sets of drawings were submitted.) Awarded to Mr. B. S. Tempest, 56, Station-road, Harrow-on-the-Hill.

Certificates of Hon. Mention awarded to: Mr. R. O. Vine, A.R.I.B.A., 7, Whymark-avenue, Wood Green, N.22; and Mr. Daniel Roth, 64, Antill-road, Bow, E.3.

The Pugin Studentship, a Silver Medal and £75.

For the study of Mediæval Architecture in Great Britain and Ireland. (Six sets of drawings were submitted.) Awarded to Mr. T. M. Ashford (Birmingham School of Architecture and Architectural Association), 30, Fountain-road, Edgbaston, Birmingham. Certificate of Hon. Mention awarded to Mr. Sydney W. J. Smith, "Kenilworth," 40, Ashbourne-grove, East Dulwich, S.E.22.

The Owen Jones Travelling Studentship and £100.

Two applications were received. Certificate and £100 for Ornament and Coloured Decoration. Awarded to Miss Ruth Ellis (Architectural Association), 44, Clarendon-road, Holland Park, W.

The Royal Institute Silver Medal and £50 for an Essay.

Only one essay was submitted. Not awarded.

The Henry Saxon Snell Prize, £60.

(Three designs were submitted.) Prize awarded to Mr. Graham R. Dawbarn, A.R.I.B.A., 1, Montague-street, W.C.1.

The R.I.B.A. (Alfred Bossom) Travelling Studentship, Gold Medal, and £250.

A Gold Medal and £250 for the study of Commercial Architecture in America. Awarded to Mr. E. Wamsley Lewis (Architectural Association), 9, St. Edmunds - terrace, Regent's Park, N.W.8. A Silver Medal and Certificate of Hon. Mention awarded to Mr. B. W. R. Thomas, Briar Dene, North-road, Cardiff, and Silver Medals to Mr. E. H. Ashburner, A.R.I.B.A., B.Arch.(Liverpool), 164, Willesden-lane, Brondesbury, N.W.6, and Mr. John R. Moore, A.R.I.B.A., 13, Acland-road, Willesden Green, N.W.2.

The Grissell Gold Medal and £50.

For the encouragement of the study of Construction. The subject set for this year was "A Sculptor's House and Studio." (Three designs were submitted.) Prize awarded to Mr. E. C. P. Allen (Architectural Association), 6, Belsize-square, Hampstead, N.W.3.

The Godwin Bursary and Wimperis Bequest, a Silver Medal and a Sum of £250.

For the promotion of the study of works of Modern Architecture abroad. (Five applications were received.) Awarded to Mr. J. Murray Easton, A.R.I.B.A., 36, Bedford-square, W.C.1.

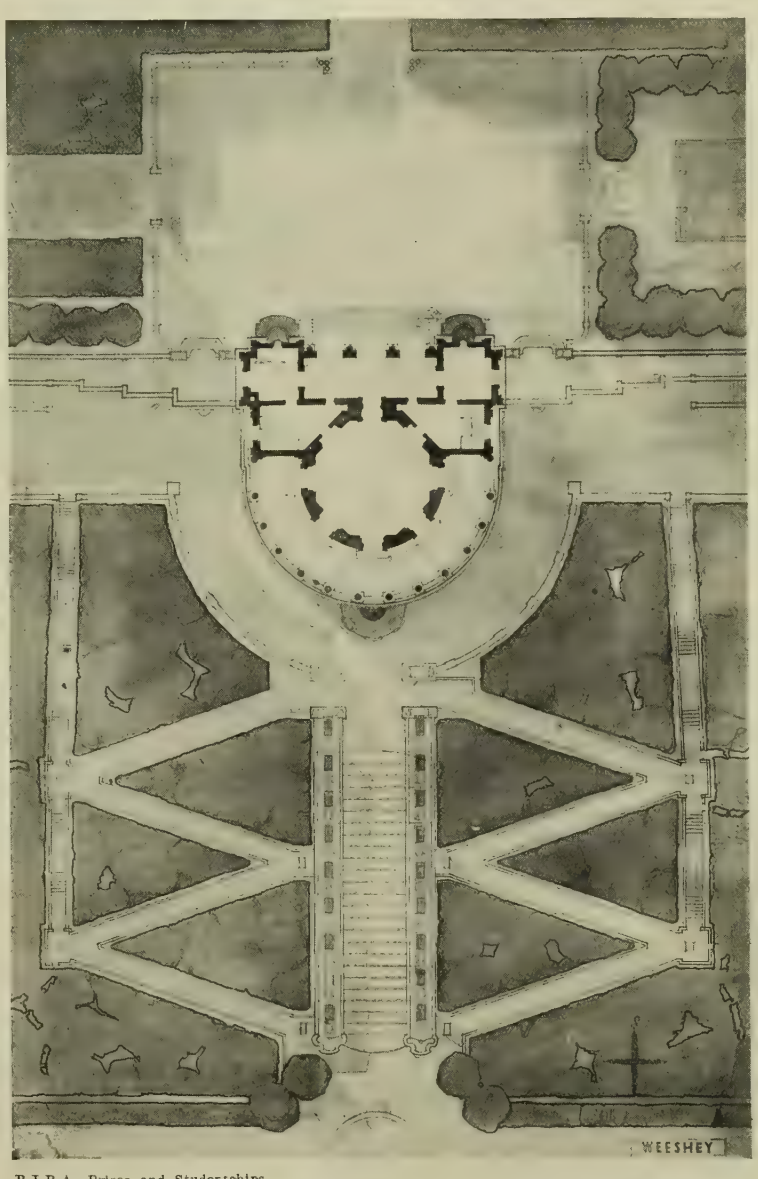
The R.I.B.A. Silver Medal for Schools of Architecture Recognised for Exemption from the Final Examination.

Awarded to Mr. J. Morrison, A.R.I.B.A., School of Architecture, Robert Gordon's Colleges, Aberdeen.

The Ashpitel Prize, 1927.

Awarded to Mr. L. W. T. White, A.R.I.B.A., 80, Mayfield-street, Hull.

The R.I.B.A. Bronze Medal and £5 in Books for Schools of Architecture Recognised for Exemption from the Intermediate Examination.



Awarded to Mr. E. B. O'Rorke (Architectural Association).

The Competition Drawings will be on exhibition in the R.I.B.A. Galleries, 9, Conduit-street, W.1, to January 31, between the hours of 10 a.m. and 8 p.m., Saturdays 10 a.m. and 5 p.m. (Sundays excluded).

THE MASTER BUILDINGS OF ROME

Etruscan and ancient Roman architecture formed the subject of the first lecture of the Lent course by Sir Banister Fletcher, V.-P.R.I.B.A., at the Central School of Arts and Crafts. The lecturer pointed out that Roman architecture proper covers five centuries (100 B.C. to A.D.400) during the time when the world-wide Empire of Rome was at the zenith of her greatness. Italy was rich in building materials—white and coloured marbles of her own quarries, abundance of building stone and brick-earth for terra-cotta, granite from Egypt, porphyry from Greece, and all the glowing marbles from the coasts of the Adriatic and the Mediterranean. An expanding Empire and a complex civilisation gave birth to a variety of building needs, to meet which the Romans invented a new composite material, which was made up of broken stone and Pozzolana cement and poured like a household jelly into shapes and left to set. Then the wooden casing was removed and the concrete remained, hard and rigid. The invention and use of this material was the great outstanding fact in the structural aspect of Roman architecture; for this quality of rigidity made it possible to span great areas with domes and vaults of concrete. Thus these complicated types of buildings broke away from the simple trabeated style of the Greeks. This revolution in methods and plans opened the way for great utilitarian works, such as city aqueducts and cisterns, military bridges, public baths, and imperial palaces, some of which were allied to engineering undertakings.

These splendid Roman structures, often so complex in plan, were yet symmetrical, for they were planned on axial lines, which gave long vistas and an appearance of unity. The circular sweep of the Pantheon also showed that the old Roman architects could command as well the perfection of simplicity. The composite origin of Roman architecture, was a union of the old native Etruscan arch and vault with the Greek column, to which the Romans added their own cross vault and dome. Above all it was evident that their idea was not art, but Empire—it was not so much to create a thing of beauty as to produce a lasting evidence of power.

R.I.B.A. Prizes and Studentships.

The Tite Prize. A Belvedere: Plan of Winning Design.
By Mr. Eric B. Cumine (Architectural Association).

AMERICAN APARTMENT HOUSES—II

BY F. E. BENNETT, A.R.I.B.A.

PLANNING—I.

AMERICAN flats are all fairly distinct types, and the plans given in this section are examples of the best types. In laying down the plan, the first step taken is to mark off the courts required by the law. The widths and depths of these have been definitely established by its clauses, and they bear a direct relation to the height of the building. Further, the law definitely regulates the depth of further courts which may be required in the block plan. The planning falls under two heads:—

(1) The planning of one flat.

(2) The grouping together of two or more flats on one floor (there may be any number from 1 to 30).

The typical plans with only one flat are therefore dealt with first.

FIG. 6.—TYPICAL PLAN—1 FLAT—12 ROOMS. Corner site, 100 ft. by 50 ft; 16 stories; 81 per cent. occupied ground area; 620, Park-avenue, N.Y. Mr. J. E. R. Carpenter, architect.

This is a simple and well-designed plan, and a good one to take as the main example. The building is situated in the heart of the good residential district—something like our Park-lane—and it is, I think, one of the best of its kind in the city. The elevation is in the Adam-Georgian style and looks domestic and refined, the materials being well handled to give a warm and pleasant colour scheme. The usual heavy cornice is eliminated, and a light balustrade is introduced into the top story. From a base of limestone the upper walls rise through a transition to variegated red brick-work, and the windows are arranged symmetrically and with a little variety of shape.

On the typical plan there are three living rooms, 4 bedrooms, 3 maids' bedrooms, hall, kitchen, pantry, servants' hall, and 4 bath-rooms. The three living rooms being *en suite* and the aspect for the bedrooms south, this plan stands out from others. There is no main stairway for the tenants, all circulation being maintained by the passenger lift, the vestibule from which serves as a sort of public landing. The bathrooms are placed on the outer walls and entered direct from bedrooms instead of through ventilated lobbies. The hall leads to all parts of the flat, and has no direct access to the outer air. Four methods of exit are provided by the two lifts, the service stair and an iron fire-escape stair. There are only two fireplaces, and there is no scullery, but the kitchen contains a sink and an incinerator. The approach to the entrance of the building is made under a long awning which stretches from the curb across the broad sidewalk. A tall and richly-decorated doorway gives access to an ample chamber expensively but cleanly decorated with marbles, terrazzo and ornamental plaster work. There are rugs on the floors, wrot-iron lamps suspended from the ceiling, and a few pieces of solid-looking furniture. I visited a typical flat on the sixth floor. From the lift one is deposited into a small vestibule which, scarcely larger than the lift car, has walls of "stuc," and is furnished with a large vase on a stand and an ornamental mirror. From here one is admitted to the "foyer" or hall, which is the centre of the flat and is similar to the English hall but smaller in proportion of the living rooms. It has no window and is dim, but the rooms beyond, seen through arches, are lit brightly and are a pleasant contrast.

The living suite gives an impression of ample and well-arranged space without being more than required for a small and well-ordered family. The air is warm (artificially) and a wood fire burns in the living room. The walls are lightly panelled with wood strip mouldings laid directly on to the plaster. Electric lights are suspended from smallish wall-brackets at various points around the rooms and several free standards are connected with wall plugs. The tenants have placed their furniture carefully and with reserve, but the casings to the radiators placed under the windows are rather inferior and do not set with the scheme of decoration. All doors are open and ample daylight reaches most parts of the flat. The windows are placed symmetrically on the room centres.

The four bedrooms leading off a separate corridor are all about the same size. They are capable of taking two beds comfortably, and have one or two built-in wardrobes each, and direct access to bathrooms, the latter being complete toilet rooms, with bath, shower, w.c., lavatory basin, medicine cabinets, shelves and separate windows. A full-length mirror is fixed in the panel of the doors on the bedroom side. The walls of the bathrooms are partly tiled and the fittings are white or cream colour. There are no dressing-rooms. One cupboard for linen is accessible from the corridor.

The service is cut down to its barest minimum size, but at the same time it fulfils all its requirements. The kitchen connects directly with the dining-room via the pantry. They are run together by an archway and arranged to be sufficiently large by a neat piece of planning. Four doors lead from the kitchen and three and an archway lead from the pantry, yet all necessary apparatus is there, including gas range with vent hood over, two sinks with draining-boards, box refrigerator, all-steel dresser and wooden dressers, collapsible ironing-board (double), incinerator chute, shelves and glazed cupboards, store closet, clothes drying rack on the ceiling.

The floor is concrete and the walls are painted. The maids answer the front door without passing through the living-room and are able to bring up their friends by the service lift and entertain them without interference. Bulky rubbish is easily conveyed to the service lift. The maids' rooms are small, with a fixed wash basin in each.

Criticisms of the plan are that the whole thing is a little small in scale and that access should have been provided from the hall to bathroom No.4, so that visitors do not have to pass through bedrooms. The building stands on solid rock 16 ft. below ground. The cellar contains all the mechanical equipment for the building. The cost of the building was about 1,000,000 dols., and the gross rental value is about 160,000 dols. per annum. All the flats were taken by the time the building was completed.

FIG. 7.—TYPICAL PLAN—1 FLAT—13 ROOMS. Corner site, 100 ft. by 50 ft.; 16 stories; 80 per cent. ground area; 817, Fifth-avenue, N.Y.

This plan is similar to No. 6 for size and accommodation, but faces with its short side on to the avenue, instead of the long side and with a reversed aspect. The living room is brought down to the corner on this plan to give a view over the Central Park opposite. The service passage is eliminated and the hall joins the kitchen via the pantry, which is "dark."

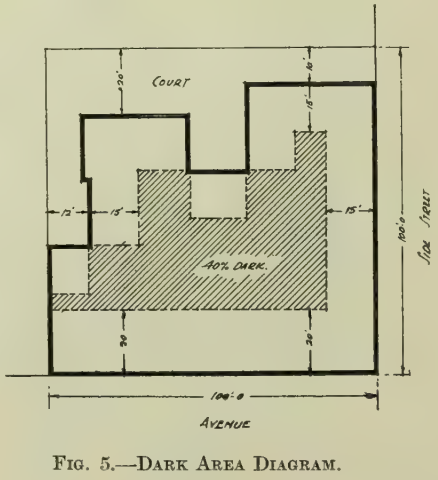


FIG. 5.—DARK AREA DIAGRAM.

FIG. 8.—TYPICAL PLAN—1 FLAT—13 ROOMS. Inside site 84 ft. by 77 ft.; 16 stories; 61 per cent. occupied ground area; 1009, Park-avenue, N.Y.

This flat is similar to the last two for accommodation, but a little larger and situated on an inside plot of ground. The living-rooms are not so well arranged and the natural light for the hall is poor. The large dark area, 22 per cent., is absorbed by the hall, the pantry, big closets (built-in cupboards), and vent shafts. Windows in the north and south party walls are only of value while the adjoining buildings remain at a lower height. Again there is no service passage. There is no direct access to a lavatory from the hall, but a new feature is the bathroom adjoining the library, which allows this room to be used for sleeping if desired.

FIG. 9.—TYPICAL PLAN—1 FLAT—14 ROOMS. Corner site, 85 ft. by 82 ft.; 16 stories; 75½ per cent. occupied ground area; 910, Park-avenue, N.Y.

This has similar shape, disposition and aspect to the last plan, but is situated on a corner. The hall is still larger, and a fire tower helps to use up the dark area. The absence of a court on the south side is unusual, but the space gained provides an additional bedroom and bathroom. Another change is the separation of the service lift from the service stairs.

FIG. 10.—TYPICAL PLAN—1 FLAT—18 ROOMS. Corner site, 100 ft. by 100 ft.; 14 stories; 410, Park-avenue, N.Y.

The three living-rooms have a better arrangement here, but the long corridor is not so good. Two lifts, the same as before, are incorporated, but separated, and, with the service lift together with the stairway, taking a central position. This arrangement is due to the splitting up of the sleeping portion with the bedrooms half on each side of the building and the service grouped around the central court at the back.

It is a good, compact plan with a very liberal number of bathrooms, but rather suffers from its long corridors and the crossing of the main corridor from the dining-room to the kitchen, an arrangement liable to interrupt circulation to the bedrooms. The pantry has no daylight, although a certain amount of borrowed light comes to it from the kitchen windows. Placing bedrooms on the south-east side of the building is rather a risky arrangement, for if the owner of the adjacent property builds up to the same height as this building, the outlook from the windows is no more than 20 ft., and so the rooms become inferior for sleeping purposes. It is a risk commonly taken, however. Park-avenue is a very fine street to live in, but Fifth-avenue is a little better owing to the view on to the Park. For this reason the previous building is more valuable than this one. There are five fireplaces.

FIG. 11.—TYPICAL PLAN—1 FLAT—18 ROOMS. Corner site, 100 ft. by 100 ft.; 14 stories; 77 per cent. occupied ground area; 820, Fifth-avenue, N.Y.

This is the largest type of flat to be found in the city, and is situated in the best residential district on Fifth-avenue and overlooking the Central Park with south and west aspects. The living portion is grouped in a suite leading off a very large dark hall, and the library capable of being incorporated with the living-room to make one compartment of 47 ft. by 20 ft. The bedrooms face south on to Sixty-third-street, and all the service rooms face on to the rear courts. There are two passenger lifts besides the service lift, and only one small internal stairway. An iron fire-escape stair leads off bedroom No. 5. It is found that when tenants give parties two lifts are hardly sufficient. The dining-room is partly lit from the north, and is in direct communication with the kitchen through a large pantry. The service rooms are closely grouped together and include seven servants' bedrooms and a servants' hall, the last being part of the circulation. An ordinary bath and a shower bath are provided for the servants, and they

have wash-basins in their rooms. These rooms are kept down to the minimum size allowed by the law, viz., 70 ft. This is a consistent feature in all plans, to give more being considered an unthinkable waste. The sleeping portion of the house consisting of five bedrooms, each large enough to take two beds and four complete bathrooms for the whole, are very liberally arranged and straightforward, although they have the one weakness of containing only one cupboard each, whereas two would have been better.

The coat cupboard and one of the bathrooms are artificially ventilated—an arrangement which seems to be justified despite the large space required for the ventilating ducts. With a plan of this size it is possible to have a very large dark area, as quite large portions of the flat can be used to absorb it. This diagram, Fig. 5, shows the dark area worked out on an allowance of light penetration of 20 ft. from the Avenue, and 15 ft. from the side street and the courts. It should be noticed that ventilation is provided for the lift lobby. Only two bedrooms contain fireplaces. Again a criticism is that the service lift and the service stairway are disconnected, which means that a tradesman must always use the lift, even if he only has to go up one story to another flat. The building is nine years old.

MEDIÆVAL ARCHITECTS

PROFESSOR HAMILTON THOMPSON, President of the Bristol and Gloucestershire Archæological Society, gave recently an interesting lecture to the Bristol members, his subject being "Mediæval Architects." The word "Architect," used with reference to the Middle Ages was, he said, perhaps not strictly accurate. The architectural profession as we understood it to-day was the growth of a later era. As a matter of fact, the mediæval architect was a mason, skilled in the practical details of his art, an artist craftsman who worked easily and freely, using the common architectural dialect, as it were, of his day, but giving it his own individual accent. It was to this type of artist that the term architect was applied by some mediæval writers, and we could still use that term, putting on one side the changed conditions of modern times. Perhaps the best illustration of mediæval building organisation was the famous account by Gervase of Canterbury of the rebuilding of the choir of Canterbury Cathedral after the fire of 1174; Gervase was probably the monk who acted as the representative of the monastery in its practical dealings with the stone masons. Their work was directed by a Burgundian mason, a master craftsman, William of Sens; after the accident which permanently crippled him in 1178, he supervised operations from his sick room, with the help of the monk Gervase. But when he had to leave Canterbury his place was taken by a mason trained under him, an Englishman, who completed the work with great skill and success. In this story we saw the various classes of people interested in a great building operation in their true perspective. There was a tradition that the bishops and abbots were the architects of their own churches. No doubt they made their wishes known, criticised plans and drawings, suggested alterations, and showed that intelligence which the architect did not always recognise. But in the Canterbury story we heard nothing of the archbishop, and the monk who was over the masons was not the architect, but a clerk of the works. The true architect was the master mason, who arranged for the choice and transport of the stone, who saw that the other masons were provided with tools and the proper material for their work, and who was frankly regarded as the responsible artist. The state of things revealed in Gervase's chronicle was found upon examination to be true of all great mediæval building efforts. It was disclosed by the fabric accounts of Exeter, York and other great churches, and from which we gained a very large number of names of artists, who, although their individuality was merged in their own day in the common activity of the society to which they belonged, deserved a fame equal to that of Inigo Jones and Wren. The great churches of the Middle Ages were truly the results of corporate effort, but over each attempt presided the skill of an individual mind, the artist who thought out the design and directed its execution.

It was often said that the names of those who worked at the fabrics of our great mediæval buildings were unknown, but while some, no doubt, had been forgotten, the names of many survived. It was possible to draw up a pay sheet for many years during the fourteenth century from the great series of Exeter fabric rolls, in which the name of every mason, and the rate of his pay for every working day, was recorded, and the same was true of other great churches, and castles as well. There were several monumental slabs of master masons in various parts of the country—Lincoln Cathedral, Croyland and Melrose Abbeys, and elsewhere.

Premises in Grosvenor-square.

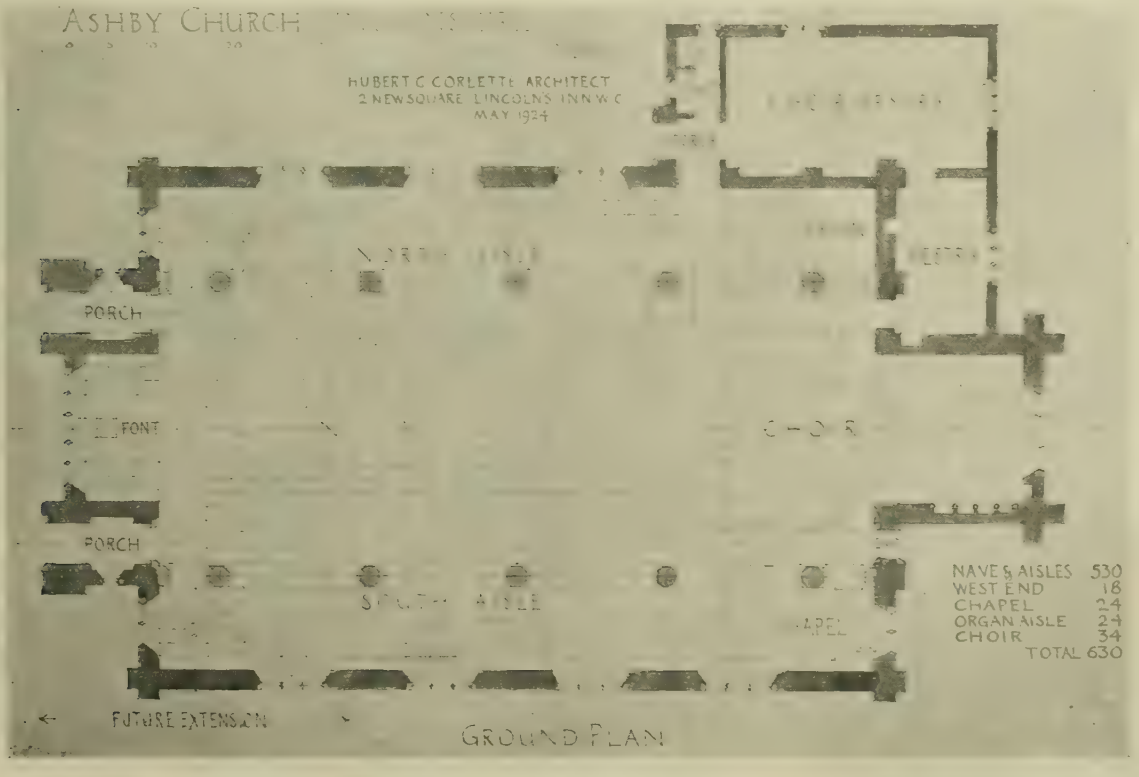
The ground floor and basement of these premises are divided into maisonnettes, each with its own separate entrance. The public rooms and main bedrooms are on the ground floor, with the kitchens and the servants' quarters in the basement. On the first to fifth floors there are flats, two to each floor, entered from the central staircase and lift. Service lifts and staircases are provided at each end of the block. The sixth floor contains one flat; the remainder of the floor is given over to extra servants' bedrooms, which can be let to the tenants. Messrs. Wimperis, Simpson & Guthrie, of 61, South Molton-street, W.1, were the architects. The general contractors were Messrs. F. G. Minter, Ltd., while among the principal sub-contractors were:—Steelwork, Albert J. Bridle; heating, J. Jeffreys & Co., Ltd.; floors, Caxton Floors, Ltd.; electrical installation and lifts, Berkeley Electrical Co., Ltd.; facing bricks, Daneshill Brick and Tile Co.; sanitary fittings, Shanks & Co.; and Leeds Fireclay Co.; and wrought-iron balustrading to principal staircase, J. M. Pirie & Co.

The New Church of St. Paul, Ashby, Scunthorpe, Lincolnshire.

With a temporary west end, the seating capacity of this church is a little over 400. When completed, sittings will be provided for 600. The church is built of brick, with stone dressings, tracery, and piers in the nave arcade. All the doors are of English oak and the nave and choir benches are of deal stained brown and wax polished. The stone used is Welldon. The facing bricks are mixed dark brown and red from Conisborough, and those for the main walling are from the Redbrown Hill local makers. The roof slopes are covered with old Delabole slates in graduated courses. The reinforced concrete flats over the aisles and vestries are covered with asphalt by Faldo & Co. Owing to conditions that limited the length of the building, the nave has been designed with a width of 33 ft. The nave in the centre is 40 ft. high internally; and the aisle ceilings, 25 ft. By the omission of a clerestory the nave arcade is made large in scale and a well-lighted interior is provided by high windows in the aisle walls. A side chapel is arranged in the south aisle. Canadian timber was used for the main structural parts of the roof principals. The inner ceiling of the nave and chancel roof is divided into panels between the principals and is decorated in colour from designs by the architect. The altar and reredos were designed as a war memorial. Messrs. John Thompson & Sons, of Peterborough, were the contractors who carried out the work under the direction of the architect, Major H. C. Corlette, F.R.I.B.A., of 2, New-square, Lincoln's-inn, London, W.C.

R.I.B.A. Prize Drawings.

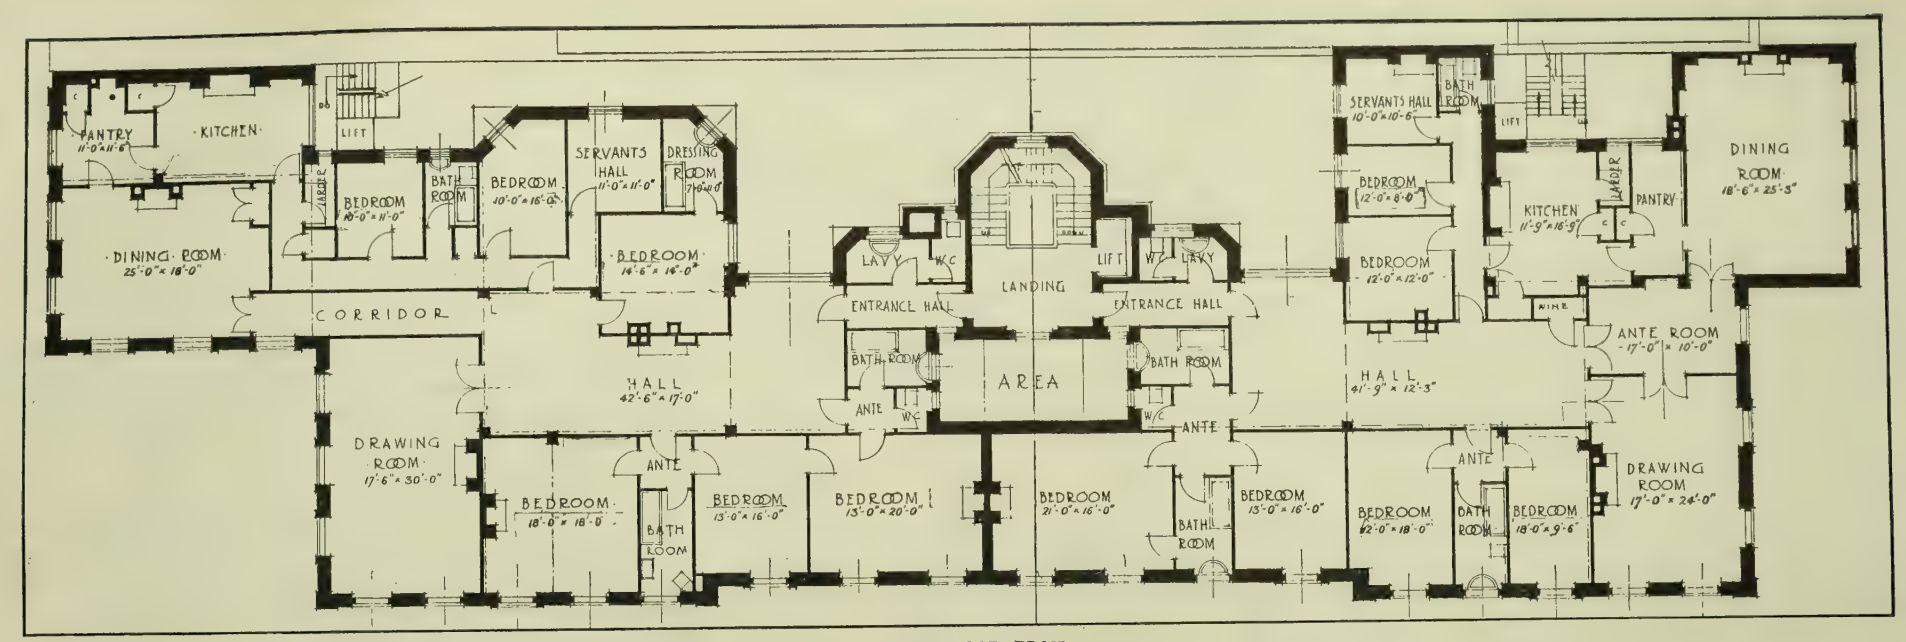
We illustrate this week the winning designs for the Tite Prize, the Victory Scholarship, the Bossom Studentship, and the Grissell Prize. A report of Mr. Robert Atkinson's review of the designs is given on page 114.



THE SOUTHEND-ON-SEA AND DISTRICT SOCIETY OF ARCHITECTS.

A short time ago, about twenty to thirty members of the architectural profession met at the School of Arts and Crafts, Southend, and decided to form a Society for the district. Mr. Ian MacAlister, Secretary of the R.I.B.A., addressing the meeting, spoke of the value of co-operation and united endeavour in professional matters and gave the proposal every encouragement, citing many instances in which the new Society could benefit the local professional interests and at the same time contribute its quota to the prestige of the architectural profession generally. Sir Charles Nicholson, Bart., F.R.I.B.A., was elected president, and the following gentlemen were elected to serve on the council for the ensuing year: Vice-president, Mr. D. H. Burles; hon. treas., Mr. Herbert R. Cowley, F.R.I.B.A.; hon. secretary, Mr. D. N. Martin-Kaye, A.R.I.B.A.; and members of council, Mr. Percy Hayward F.R.I.B.A.; Mr. Percy Fincher, L.R.I.B.A.; Mr. Norman Evans, L.R.I.B.A.; Mr. Percy Brockbank; and Mr. O. H. Cockrill, A.R.I.B.A. The newly-elected Council have already held meetings to deal with many matters of importance and to formulate an active programme for the year. The response to invitations to join the new body has been most encouraging. In connection with the sphere of operations the Council have decided for the time being, pending future affiliation with the R.I.B.A., to adopt the same area as the South-East Essex Parliamentary Division for active working purposes, and are willing to admit any members of the profession residing in or practising in this area to the membership roll of the Society.

All communications concerning the new Society should be addressed to the Hon. Secretary, at its headquarters, the School of Arts and Crafts, Dowsett-avenue, Southend-on-Sea.



Messrs. Atkinson's New Premises, Old Bond-street.

In connection with this work, which was illustrated in our last issue, it should have been stated that the general contractors were Messrs. F. A. Roome & Co., Ltd.

PARTHENON STUDIES

By W. R. LETHABY.

I.—BRITISH SCHOLARSHIP BEFORE 1800—*continued.*

"The pride of Athens and the boast of Architecture."—WILKINS.

On the state of the sculptures, Chandler wrote: "It is to be regretted that such admirable sculpture should be all likely to perish from ignorant contempt and brutal violence. Numerous carved stones have disappeared, and many lying in ruinous heaps moved our indignation at the barbarism daily exercised in defacing them." Many of the beautiful drawings made by Pars were later destroyed by fire and the residue have never yet been adequately published.

Stuart included in his work engravings of many of the drawings made by Pars of the Parthenon. These were wonderfully sympathetic and accurate; the view of the east front now in the Elgin Gallery is a miracle of tender minuteness. It clearly shows traces of a set of shields that had been attached to the architrave below the metopes, with inscriptions in five lines between them. His precious drawings of the frieze were accidentally destroyed, but fortunately they had been engraved.

Chandler says of them: "Mr. Pars devoted a much longer time [than Nointel's artist] to this work, which he executed with diligence, fidelity, and courage. His post was generally on the architrave of the colonnade, many feet from the ground, where he was exposed to gusts of wind and to accidents in passing to and fro. Several of the Turks murmured, and some threatened because he overlooked their houses." In the British Museum is preserved a large and accurate drawing of Cecrops and his frightened wife or daughter made while both figures retained the heads which have since been lost. Several sketches of the metopes are also in the Museum. The Stuart-Pars illustrations of the frieze preserve records of four or five portions now lost.

In the MS. collection at the British Museum described below is a beautiful chalk drawing of a fragment of the frieze which may be by Pars. It seems to be the original from which a much-enlarged engraving in the Museum Worsleyanum was made. It is a tragedy that so many of the drawings made by Pars are lost.

Stuart and Revett.—The second volume of Stuart and Revett's *Antiquities of Athens*, containing the account of the Parthenon, was largely based on the new material collected by Chandler's expedition in 1765–6; it was practically published on behalf of the Society of Dilettanti and is dated 1787. (See the History of the Society, by L. Cust, for the full story.)

Stuart and Revett's architectural observations embodied in the *Antiquities* are too numerous for separate mention. Among other things the fact was noted that the paving of the central part of the Cella was at a slightly lower level than the rest, and Stuart argued from it that the temple was probably hypæthral, a view which is now generally given up. "The circles on the pavement are still visible and mark the places on which the [internal] columns stood." It seems probable, however, that these were traces of church columns as the indications on Stuart's plan do not agree with what is now known of the internal colonnade. Some of the marble covering "tiles" of the roof were found, and traces of colouring (elsewhere) noted. Stuart considered the question of the length of the Greek foot as the title of a memorandum in a (lost) note-book shows.

In *Antiquities* (Vol. II) he writes: "The name of the Temple (Hecatompedon), implying that it extended a hundred feet, led me to inquire into the measure of the Attic foot." He compared the measurements of the steps of the platform and found length and width incommensurable except at the top step. This "measured 101 ft. 1 $\frac{7}{10}$ in. English in front and 227 ft. $\frac{7}{10}$ in. on each side, which are so nearly in the proportions of 100 to 225 that had the greater measure been $\frac{1}{4}$ of an inch less it would have been deficient of it." Stuart thus anticipated Penrose in saying that length to breadth was as 9 to 4. The supposition that the dimensions were 100 by 225 Greek feet would not now be accepted, it rested on the assumption that the top step on the front gave the name *hecatompedon*, whereas it is now held that name applied to the internal length of the cella, giving a Greek foot a little less instead of more than an English foot. Still, that Stuart investigated the problem is noteworthy.

Stuart first showed that the eastern end of the temple was the principal front, although it was turned away from the Propylæa. "Stuart, however, more accurate than his predecessors, had discovered that the entrance and consequently the front of the Parthenon were turned towards the east, and he had even brought this fact to a perfect demonstration; but he had not drawn the necessary inference from it, that the sculptures of the west tympan must have represented not the birth of Minerva but her contest with Neptune" (Visconti, 1816).

One of the reasons which convinced Stuart that the entrance was in the east front was the presence of the gods on the long slab of the frieze, which he saw must have had its place in the centre of the eastern front of the cella over the great door. Of these deities he identified "Juno sitting and Iris standing by her." The central figure was a priestess; the folded cloth held by a man was the peplos. The whole frieze represented the Pan-Athenaic procession. Ornaments and accessories of bronze had been added to the sculptures. He made a restoration of the western pediment, in which he introduced a crouching figure in the "gap" which has been mentioned, between Cecrops and the reclining male in the north angle. These figures are actually reversed in the engraving, but it provides valuable evidence that the "gap" seemed to require a figure to fill it, while both the neighbouring figures were in position. He argued against Spon's mistaken idea that the Cecrops group represented Hadrian and his wife.

Michaelis, after telling of Spon and Wheler and of the bombardment of the Acropolis by the Venetian Morosini in 1687, goes on:—"Again Athens vanished into darkness, until in 1751 the painter James Stuart and the architect Nicolas Revett arrived there, and remained three years, taking careful measurements of drawings of the sculpture and architecture, which till then had never been accurately examined. Many things remained in those days which have since disappeared. The Athenian enterprise of Stuart and Revett was the most eventful and important of all expeditions so far undertaken, and would have been of greater significance had not the publication of their great work, the *Antiquities of Athens*, been so long delayed. . . . The Dilettanti who had subsidised the publication became impatient and in 1764 sent out the Ionic Expedition at their own expense. Besides Revett, the scholar Richard Chandler and the excellent draughtsman William Pars were added to its number. We owe to them, besides supplementary notes on Athens, the first [published] survey of the remains of temples on the Ionic coast of Asia Minor."

In the British Museum Manuscript Room is a collection of drawings, prints and documents brought together, in part at least, by Joseph Woods, the editor of Vol. IV of the *Antiquities*, published in 1814 in the preparation of that volume (Add. 22152-3). There are also several drawings which seem to have been made in Athens by Woods in 1818, and probably the whole collection was his. The smaller volume of the two begins with a list of "Stuart papers," filling many pages, and consequently the collection has sometimes been called "The Stuart Papers." The list includes reference to many note-books and sketch-books. In these were notes and beginnings of treatises: on Architecture and Painting; on Truth; on the Absurd, etc. Such subjects as History of Philosophy and Greek Proverbs are mixed up with poems which "appear to be by Stuart": the beginning of a translation of Vitruvius; translations from Pausanias and Strabo, etc. Most of these books were only half full, and "all but one began at both ends." At the Institute of Architects are two or three original water-colour views of Athens by Stuart.

Stuart must have been expert in Latin, as he wrote a treatise in it; he also appears to have had a competent knowledge of Greek, and he refers to original authorities in that language. He obviously had read much, and he seems to have had an inclination for exact measurements and calculations. On a proof of the octagonal Temple of the Winds he has checked the length of a side as the tangent to a given radius for an angle of 22½ degrees. His excellent judgment is shown by what he says of the fashion for measurements by modules. "We have contented ourselves with setting down measures in English feet, purposely forbearing to mention modules, as they necessarily imply a system and perhaps too frequently incline an author to adopt one." Penrose commends his exact measurements.

In the collection are several sheets of diagrams of volutes with calculations. Also a few drawings of architecture and sculpture. A letter states that the notes on the life of Stuart in Vol. 78 of *The Gentleman's Magazine*, signed A. H., were by Anthony Higham, a friend of his.

Stuart, after his return, did some work as an architect. In the Victoria and Albert Museum are original drawings of his designs for Holdernesse House, Park-lane, and of a house in St. James's-square.

Accounts of the lives of Stuart and Revett are given in Vol. IV of *The Antiquities of Athens* and the Dictionary of National Biography. Stuart's works and MSS. collections are evidence of an active exploring mind; while working over the material I have been drawn to think of Leonardo—notwithstanding a vast difference of scale between the two men.

In 1785 W. Reveley, the architect, travelling with Sir Richard Worsley, visited Athens. In the Victoria and Albert Museum is a drawing of the Portico of the Agora made at this time, together with views of the temples at Pæstum. On his return Reveley edited the third volume of *The Antiquities of Athens*, dated 1794.

Nothing we could do at the present time would give Parthenon studies a greater stimulus than the publication of a selection of the old drawings made by our artists.

OBITUARY

Sir Whitworth Wallis.

We regret to record the death of Sir Whitworth Wallis, Keeper of the Birmingham Museum and Art Gallery, at the age of 71. Sir Whitworth was born at Handsworth on June 23, 1855, his father being the late George Wallis, F.S.A., senior keeper of the South Kensington Museum. After being educated privately in London, Paris, and Hanover, he was placed in charge of the Bethnal Green Museum in 1879, but soon afterwards he was given the care of the famous Indian collection of art treasures formed by King Edward and kept at South Kensington, and in 1885 he was appointed curator of the then newly-formed Birmingham Museum and Art Gallery. From first to last the galleries have owed a great deal to him; and when he received a knighthood in 1912 it was recognised that the honour was as well deserved as it was rare.

CONSTRUCTIONAL STEELWORK SIMPLY EXPLAINED.—XVII

BY OSCAR FABER, O.B.E., D.Sc., M.Inst.C.E., etc.

[EDITORIAL NOTE.—*This series, which will be published in book form later, is intended to present the problem in so simple a form as to be readily understood by those having no special engineering training.*]

WE dealt last time with rivets and bolts in general. There are a few special applications which require mention. The first is perhaps the rivets required to connect the flanges to the web of a plate girder.

It was mentioned and proved earlier in this series that vertical shear in a girder is always accompanied by an equal horizontal shear. The existence of this horizontal shear is perhaps made clearer by considering three planks superimposed, as shown in Fig. 47 (*a*). Treating these as a beam supported at the ends and loaded in

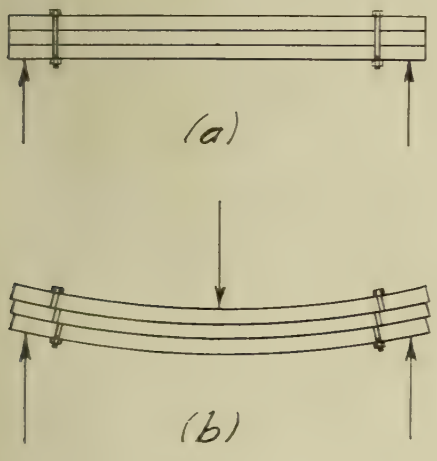

FIG. 47.

the centre, they would deflect in the manner shown in Fig. 47 (*b*), each plank deflecting equally and separately as shown. It has already been shown that, as each plank forms part of a segment of a circle, the top of each plank, being of smaller radius, will be shorter than the bottom. For the same reason, the bottom of the top plank will be longer than the top of the second plank, and will therefore project beyond it at each end, as indicated. This means that a bolt or rivet going through each plank would now tend to be broken by the horizontal movement of the planks, as shown in Fig. 47 (*b*), and would tend to take up the shape therein indicated. This illustrates not only the horizontal shear in a girder, but also in the rivets connecting the flanges to the web, because the middle plank may be considered to be the web, the top and bottom planks the top and bottom flanges respectively, the problem being in no way altered in principle by the fact of the web being somewhat thicker than is usual and somewhat less in depth in relation to the thickness of the flanges.

Consider now Fig. 48, showing half of a plate girder in which the flanges are connected to the webs by means of rivets and angles. It is desired to calculate how many rivets are necessary between the points A and B anywhere along the girder, these points being conveniently taken 12 in. apart. There are two ways in which we may proceed.

The first makes use of the fact that the vertical shear and the horizontal shear are equal. If, therefore, we calculate the vertical shear on the plane CC (half-way between AA and BB), and we divide this shear by d, d being measured in feet, then the vertical shear per foot run is $\frac{S}{d}$. This is therefore also equal to the horizontal shear per foot run, and provided sufficient rivets are placed per foot as will take up the shear S, our problem will have been solved.

A second method, which, of course, yields the same results but is to some people a little easier to follow and is, in any case, a useful confirmation, is to calculate the bending moment at section AA and at BB, the latter being, of course, in the present case the greater. The girder being of constant depth, it is equally easy to calculate the flange forces due to these bending moments, P_1, P_2 respectively, by dividing the bending moments by the depth in each case. Clearly the difference between P_2 and P_1 represents an increment of force in the flange which can only have been transmitted to it through the medium of the shear in the rivets between sections A and B, and therefore sufficient rivets have to be provided between these two sections to take the difference in flange force $P_2 - P_1$.

Let us make this clear by means of an example. Let us take a girder of 30-ft. span with d = 3 ft. (measured to the centre of gravity of the flanges), and the central load being 60 tons. Let the section AA be 2 ft. from one support and BB 3 ft. from it. The vertical shear at the section CC is clearly 30 tons, and therefore the vertical shear per foot run is

$$s = \frac{S}{d} = \frac{30 \text{ tons}}{3 \text{ ft.}} = 10 \text{ tons per foot run.}$$

This is therefore also the horizontal shear per foot run, and hence sufficient rivets have to be inserted per foot to take this shear.

Considering first the rivets between the flanges in the angles, there are two of these per row, and each rivet is worth 2.4 tons in single shear if they are $\frac{3}{4}$ in. in diameter, or 4.8 tons per row of two. The rows would therefore need to be approximately 5 in. apart, because this would give a shear per foot of

$$4.8 \text{ tons} \times \frac{12 \text{ in.}}{5 \text{ in.}} = 11.5 \text{ tons per foot,}$$

as against the 10 tons required.

Coming now to the rivets connecting the angles to the web, there is only one of these for each two of the others (assuming they are spaced equally far apart); but they are in double shear, so that the value of each rivet would be

$$2.4 \times 1\tfrac{3}{4} = 4.2 \text{ tons.}$$

If spaced at 5-in. centres as before, they would therefore be good for

$$4.2 \text{ tons} \times \frac{12 \text{ in.}}{5 \text{ in.}} = 10.1 \text{ tons.}$$

as against the 10 tons per foot required.

Let us now consider the problem, using the second method.

The bending moment at AA would be

$$M_A = 30 \text{ tons} \times 2 \text{ ft.} = 60 \text{ ft. tons.}$$

Similarly, the bending moment at BB would be

$$M_B = 30 \text{ tons} \times 3 \text{ ft.} = 90 \text{ ft. tons.}$$

The depth of the girder being 3 ft., the flange forces would be

$$P_1 = \frac{M_A}{d} = \frac{60 \text{ ft. tons}}{3 \text{ ft.}} = 20 \text{ tons,}$$

and

$$P_2 = \frac{M_B}{d} = \frac{90 \text{ ft. tons}}{3 \text{ ft.}} = 30 \text{ tons;}$$

therefore $P_2 - P_1 = 10$ tons, which, of course, is the horizontal shear per foot, and gives the same value as before.

From the consideration that the horizontal shear per foot is the same as the vertical shear per foot, it follows, of course, that the distribution of horizontal shear along the length of a girder will be exactly the same as that for the vertical shear.

It therefore follows that a girder centrally loaded where the vertical shear is constant from its midspan to the support would also have the horizontal shear constant, and the rivets will therefore require to be uniformly spaced. On the other hand, a girder uniformly loaded has the vertical shear, and therefore also the horizontal

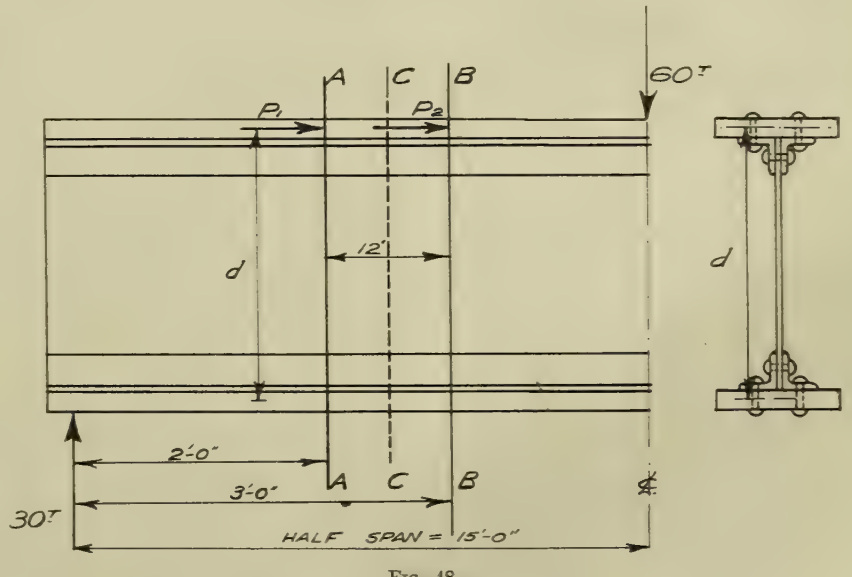

FIG. 48.

shear, varying from zero at midspan to a maximum at the support, and the rivets would therefore require to be closely spaced near the supports and can be further apart as we approach the centre. It is, however, not good practice to put the rivets much more than 6 in. apart, whether the horizontal shear requires them or not.

The number of rivets which can be got from practical considerations generally form the limiting consideration in determining the minimum depth of very heavy short girders, and it will be clear that it would be difficult to exceed 30 tons per foot with a single web.

This gives one some means of determining the minimum depth of girders from a shear consideration. Thus a girder to carry 100 tons will have a shear of 50 tons, and should not be made less in depth than

$$\frac{50}{30} = 1\tfrac{2}{3} \text{ ft.},$$

and so on, in proportion.

Another problem in connection with rivets is in the connections between beams and beams. In Fig. 49 is shown a typical connection of a secondary beam with a main beam, the connection taking the form of two angles riveted as shown. These angles in this connection are generally called cleats.

Where the secondary girder is of the same depth as the main girder, as may occur, the secondary has to be "notched," as shown in Fig. 49 (*b*). This does not appreciably weaken it, as there is little bending moment at the end. From what has been said, an approximate idea of the strength of such a connection can readily be calculated, but it is somewhat complicated, particularly in the case of connections with few rivets, by the eccentricity of the load on the connection. It is clear, for example, that if we are dealing with very small beams, a single rivet, as shown in Fig. 50 (*a*), would be most unsatisfactory, since the load is applied to the cleat at the end, which, of course, exerts a rotational tendency on the rivet in double shear, and this connection would, in fact, fail in that way. It would therefore be necessary for the single cleat to have at least two rivets, as shown in Fig. 50 (*b*), to prevent this rotation.

The strength of this cleat connection cannot be obtained by merely adding together the strengths of the two rivets, as will readily be seen by considering the forces in Fig. 50 (*b*), the forces being denoted by P_1, P_2, and P_3 respectively, and being the forces exerted on the angle cleats through their respective rivets.

The force on P_1 obviously being upwards, it follows that P_2 must be downwards and P_3 upwards, since if an attempt is made to reverse the direction of either P_2 or P_3 it will be found impossible to produce a system of forces which would be balanced against rotation.

Taking the distances between the forces as 2 in. and 3 in. respectively, it follows that P_3 is two-thirds of P_1, and P_2 equals

$$P_1 + P_3 = P_1 + \tfrac{2}{3} P_1 = 1\tfrac{2}{3} P_1.$$

The maximum load on P_2 must be limited to that which will not overstress a $\frac{3}{4}$-in. rivet in double shear (assuming, of course, that we are using $\frac{3}{4}$-in. rivets), which is 4.2 tons. We therefore have

$$4.2 \text{ tons} = 1\tfrac{2}{3} P_1,$$

whence

$$P_1 = \frac{4.2 \text{ tons}}{1\frac{2}{3}} = 2.5 \text{ tons}.$$

It will therefore be seen that this cleat can only be used for reactions of 2.5 tons, although the addition of the safe shear on each of the rivets would have given twice 2.4 = 4.8 tons, so that in this case the eccentricity of the loading reduces the strength of the connection to less than one-third, and is therefore obviously a matter requiring serious attention.

The same principle applies in the calculations of the strength of all other cleated connections, but the effect of eccentricity is less marked as the number of rivets increases, and is less for cleats having a single row of rivets, such as Fig. 49 (*b*), than in the case of cleats having two rows of rivets, such as Fig. 50 (*b*).

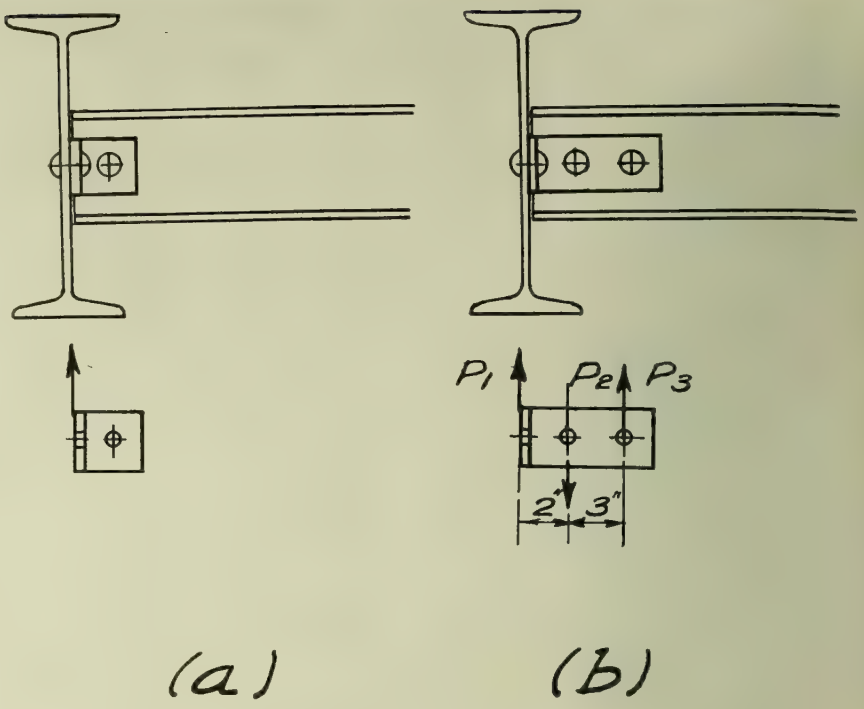

FIG. 50.

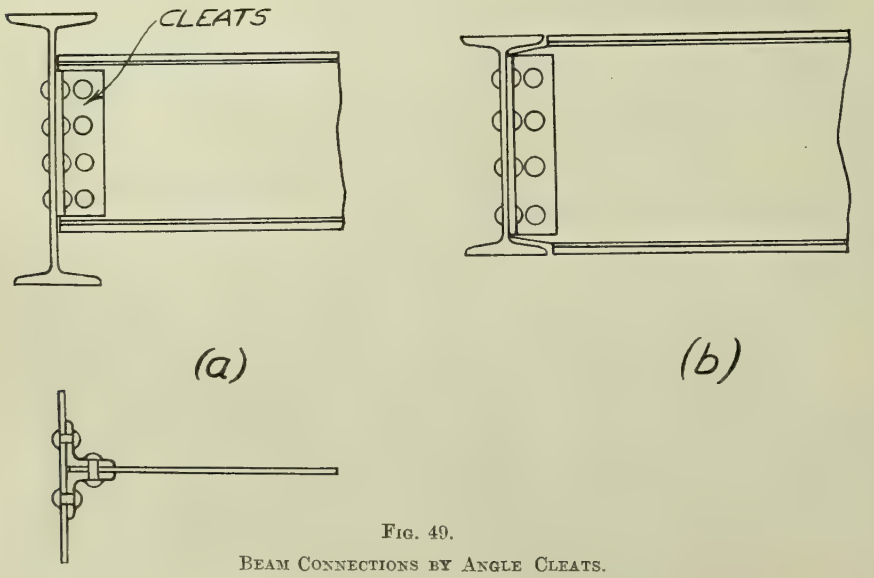

FIG. 49.

BEAM CONNECTIONS BY ANGLE CLEATS.

The Wittet Memorial.

The memory of the late Mr. George Wittet, F.R.I.B.A., who did so much to make Bombay into no mean city during his twenty-two years' connection with it, is to be perpetuated by a memorial. Mr. W. H. Neilson, of the Bombay Port Trust, is the chairman of the Memorial Committee. The memorial, it is understood, will take the form of a tablet, to be erected in "The Gateway of India"—which is one of the examples of Mr. Wittet's art—and the endowment of one or more travelling scholarships for architectural students. Subscriptions may be sent to the Joint Honorary Treasurers, Wittet Memorial Fund, c/o. Lloyds Bank, Hornby-road, Bombay.

British Archæological Exploration.

The Trustees of the British Museum, after careful investigation, have, it is understood, come to the conclusion that a continuance of the work of archæological exploration of British Honduras is of great importance to the Empire. As a result of the excavations undertaken at the early Maya site of Lubaantun last spring an invitation has been issued by the Colonial Government to the Trustees to undertake the further supervision of the work.

It is reasonable to suppose that an intensive survey of the colony from the archæological point of view would result in as great a contribution to our knowledge of the origin and development of pre-historic American culture as has been made in the past by British enterprise to that of Old World civilisations.

THE WORK OF THE ARCHITECT

By T. P. BENNETT, F.R.I.B.A., Hon. F.I.O.B., Hon. F.I.B.D.

(Concluded from last week's issue.)

EVERYONE is familiar with the attempts which have been made to define beauty. It is normally indefinable but unmistakable. It is composed of many elements. It must possess texture and colour, form and originality. It must express the purpose of the building; the method of construction and the material of which it is composed. It must bear the imprint of the designer, of the user, and of the time in which it is formed. It must have solidity and grace, power and interest. With so diverse a programme it is frankly impossible to teach an undesigning mind how to design. It must therefore be laid down that the architect, perhaps more properly the embryo architect, should have innate ability to design, that he should develop this ability by constant study and practice so that slowly the brain becomes attuned to its job and is able to weave a beautiful structure around an ordinary building. Sometimes a design surmounts its limitations beyond the hope of ordinary men, and it is then hailed as a work of genius. The genius in architecture is rare and unmistakable.

Perfection in architecture is elusive, and difficult to obtain. Perhaps it may be argued that perfection in any form is almost unobtainable, and while this is probably true of all the works of mankind, it is particularly true of architecture because there is no means of testing the effect until the whole is complete. The architect must, however, regard design as only one of the qualities which are expected from him and must add to his unmistakable artistic attainment the essentially practical qualities which are comprised by the section and the plan. Design alone may make an artist, but it will not make an architect, and unless the architect can add to his powers of design some or all of the requirements already enumerated, he is likely to find that the most cherished qualities of his conception have disappeared in the process of transferring the design from paper to material.

A great field of information must be adequately covered in order that the architect may deal with his constructional problems; innumerable details must be absorbed. Alternative methods of construction must be known, the contemporary use of all materials must be perfectly grasped. It is necessary that the details of methods of jointing bricks, stone, timber, iron, steel and concrete should have become a commonplace. A knowledge of the appropriate possibilities of all forms of construction is essential, and the ability to choose any one for any position and to choose it rightly is one of the surest tests of architectural capability. This will involve not merely a knowledge of all methods of construction but a knowledge of their relative costs and of subsidiary information which will vitally affect the final choice.

PROPRIETARY ARTICLES.—Science has tended towards specialisation, and inventors are turning their attention more and more to the development of building materials and the adjuncts of building. The wearing and weathering qualities of existing materials have been investigated and a large number of proprietary articles have been placed on the market as substitutes for, or additions to, the materials with which older generations were familiar. In marketing these proprietary articles considerable ability has been shown. Their advantages have been carefully enumerated and details are daily placed before the architect to show their advantage. It is difficult to refuse to adopt an article which is apparently economical and satisfactory, and which has withstood a certain number of tests with every success; and in most cases economy is urged, and where the client possesses a knowledge of the particular item before the architect, he will press his professional adviser to use it because it may involve a substantial reduction in cost. For those reasons it is more and more necessary for every man in professional practice to possess a large amount of physical and chemical knowledge so that he may at least form a sound opinion of the proposals with which he is daily faced. Many defects in building become evident only after extensive use and the building world still awaits the invention of satisfactory ageing tests which would really reproduce the condition of actual work over a period of years. The success or failure of many buildings will, however, depend to a very large extent upon the amount of knowledge which the architect is able to bring to bear upon the use of these new materials.

SPECIFICATIONS.—The gift of precise language both in the writing of specifications and in the giving of instructions is another of the extraneous but necessary qualities of the architect. There must be many instances in which failure to convey to others (often of limited intelligence) the exact intention of a design or piece of construction has involved serious claims for extras and consequent damage to the prestige of an otherwise efficient practitioner. The specification should be a concise and accurate statement of the whole of the requirements of the design, and a full, well-written specification will save endless difficulties in the execution of the work. It is obvious, moreover, that precise information of this kind is trebled in value in supervising or erecting jobs which are many miles from the architect's office.

ENGINEERING.—Although the technicalities of heating, lighting and ventilation are involved and must be handled by specialists, the architect is responsible for the installation of the system adopted and draws fees upon its cost; he is unable, therefore, to shirk the responsibilities entailed. Even where specialists are employed the architect is often able to decide much more accurately than any specialist the right type of system for a particular building, and he will choose his specialist after he has decided upon his scheme. Moreover, when the specialist has described in detail the high or low pressure hot-water scheme, the panel-heating, hot-air or steam-heating scheme which he proposes to adopt, it is the architect who must weigh its advantages or disadvantages and must give the final decision or final advice to the client before the work is put in hand. Similarly a knowledge of lighting systems and of lighting fittings, reflectors and other matters of importance must be possessed by the architect.

The detail of the scheme in most, if not in all, instances will be worked out by the specialist, but this does not alter the fact that a very large measure of responsibility remains with the architect, who controls the appointment of the specialist. Relative costs are matters of great importance, and there is in most cases a separate specialist on electric lighting, gas, petrol or acetylene, and the relative costs with these systems must often be decided before the specialist commences his work.

LEGAL.—In an important London contract the amount of legal work must be a constant matter of astonishment to those who are unaware of its existence. The Building Acts of London have a legal atmosphere and involve purely legal decisions upon wording and other matters which are entirely foreign to the by-laws of the provincial towns and cities. A very large number of buildings involve all the legal paraphernalia of the party-wall awards and party-wall notices entailing research to discover under lessees and superior landlords. Rights of light and air and other easements are a common occurrence, and involve a legal attitude of mind even if the legal details are finally handled by a lawyer.

Conditions of contract are constantly before the architect. In many instances they travel their course reposing in the architect's safe, and their clauses are never called to question; but once in a while the architect must be very keenly aware that their use forms a very important element in the means by which the building is erected.

ORGANISATION.—Power of organisation is evident in the office and on works. Works must be supervised satisfactorily and this can only be done if a definite method is followed. In a large office, control and influence are of a very great value. Drawings are produced by many hands, and unless real efficiency reigns, there is a possibility of very substantial losses and mistakes.

FINANCE.—Finance enters into every building in some form or another. Sometimes it is the governing factor; at others it is of less importance, but it can never be said to be non-existent. Artistically the building is successful only if it meets every one of the conditions under which it was erected, and inasmuch as finance is a condition of building it must be an element in design. It is wrong to ignore it or to give it a place of no importance, just as much as it is inartistic to allow it to be the sole and only factor in the scheme.

SUMMARY.—Finally, in summarising these outlines of the vast field of knowledge which the architect must cover, it will become evident that his ability will be that of a man of real versatility, and that unless he possesses a mind capable of dealing with a large number of divergent problems he must work as one member of a syndicate or partnership, or must have serious drawbacks in the execution of work in which all these qualities are of real importance. The fascination of the work lies in its variety, and this is the compensation to the man who decides to devote his work and his leisure hours to the practice of an interesting but very difficult profession.

REGISTRATION OF ARCHITECTS

A conference of Allied Societies of the Roya Institute of British Architects was held in London on Monday last, to receive a report from the R.I.B.A. Registration Committee in regard to the Architects' Registration Bill, which is about to be introduced into the House of Commons. The meeting was attended by the President of the R.I.B.A., and by the Presidents and other delegates of the Allied Societies, the latter representing some 5,000 architects practising in Great Britain and Northern Ireland. The areas covered by these bodies include London and the Home Counties, Scotland, Wales and Northern Ireland, the counties of Berks, Bucks, Oxon, Warwick, Stafford, Shropshire, Hereford, Worcester, Devon, Cornwall, Hampshire, Isle of Wight, Yorkshire, Leicestershire, Rutland, Lancashire, Cheshire, Westmorland, Norfolk, Northampton, Northumberland, Cumberland, Durham, Middlesbrough, Nottingham, Derby, Lincoln, Gloucester, Wiltshire, Somerset, and Dorset.

The Secretary of the R.I.B.A. Registration Committee, Mr. C. McArthur Butler, presented a report showing that as a result of representations made in their corporate and personal capacity by the Councils and members of the R.I.B.A., and its Allied Societies within their respective constituencies, many responses had been received, and were still coming in, from Members of Parliament in support of the Bill for the registration of Architects.

Reference was also made to the wide publicity given to the proposals by the Press, which seemed generally to recognise that the matter was one of considerable public interest and that the proposed Bill was a natural corollary of the educational work of the R.I.B.A. in building up a widespread system of architectural education throughout the country. The view was expressed that if fortunate in the ballot there was every probability of the Bill being passed by both Houses of Parliament during the coming Session.

PARTY WALLS: PRACTICE AND DECISIONS

By J. DOUGLAS SCOTT, A.R.I.B.A.

CHAPTER III.

DEFINITIONS AND DECISIONS UNDER COMMON LAW.

THE primary and most usual meaning of the term, "party wall," under Common Law, is a wall of which the adjoining owners are tenants in common. The common user of a wall separating adjoining buildings or land of different owners may be accepted as *prima facie* evidence that the wall and the land on which it stands belong to the owners of the adjoining properties in equal moieties as tenants in common. Where such a wall has been erected at the joint expense of the adjoining owners, the same principle applies.

Where two properties are separated by a party wall it may be accepted, subject to evidence to the contrary, that the middle of the wall is the boundary between them. If the quantity of land which each owner contributed to the site of the wall is known, the property in the wall follows the property in the land. The usual definitions of a party wall under local by-laws differ from those in the London Building Act, and are as follows :—

(*a*) A wall forming part of a building and being used or constructed to be used in any part of the height or length of such wall for separation of adjoining buildings belonging to different owners, or occupied or constructed or adapted to be occupied by different persons ; or

(*b*) A wall forming part of a building and standing in any part of the length of such wall to a greater extent than the projection of the footings on one side on the grounds of different owners.

Variations in the wording of these definitions are found in different parts of the country. It was laid down in the leading case of *Watson v. Gray* (1880), that the term, "party wall," may be used in four different ways, as follows :—

(1) A wall of which the two adjoining owners are tenants in common ;

(2) A wall divided longitudinally into two strips which belong to each of the joint owners ;

(3) A wall which belongs entirely to one of the joint owners, but is subject to an easement in the other to have it maintained as a dividing wall between the two tenements ;

(4) A wall divided longitudinally into two moieties, each moiety being subject to a cross easement in favour of the other moiety.

It is unusual to find a definition of "owner" under local by-laws, but the general principle throughout the statutes dealing with property is to throw the expense of structural works upon the "owner" as defined in each statute, except in these matters affecting the public safety or public health, where the object is to get the work done immediately, no matter by whom.

The Public Health Act, 1875, makes provision for taking down, securing or repairing dangerous walls, but makes no provision as to how the expense is to be borne by the different owners. The provisions under the London Building Act are much more complete and provide for the expense to be borne in various ways. There does not appear to be any rule or decision as to the liability for payment where a party wall, held in common by the owners of adjoining houses which depend upon it for support, becomes ruinous, necessitating its repair or re-building, and one of the part owners undertakes the necessary work.

Disputes frequently occur between neighbours as to the ownership of garden walls and fences, in general these belong to the owner of the land on which they stand, and where the ownership is not disclosed by the deeds the question can usually be determined on survey. The wall generally belongs to the owner on whose side the piers or buttresses stand ; if there are piers on both sides, it belongs to the adjoining owners on each side in equal moieties. A fence belongs to the owner of the land on which its supporting posts stand, the reason being that a property is always enclosed to its extreme limit, which can only be done by placing the supporting posts upon the inner side.

Hedges often separate two properties, and the Ordnance Survey Department are instructed to measure to the centre of a hedge ; but the centre of a hedge is not always the true boundary, as where there is a ditch on one side of the hedge the boundary of the lands extends to the edge of the ditch furthest from the hedge, usually considered by surveyors as 4 ft. from the centre of the hedge. Where there are ditches on both sides of the hedge, the centre of the hedge may be taken as the boundary.

Under the Law of Property Act, 1925, which deals mainly with the consolidation of enactments relating to conveyances and other instruments creating interests in property, tenants in common and joint tenancies are, for the purpose of future demise, created statutory trusts, to be held on trust for sale, but not so as to sever their joint tenancy in equity, and the law as laid down in the following decided cases under common law will not be affected in principle.

A tenant in common of a party wall cannot maintain an action for trespass against the other tenant unless there is what is known in law as an actual ouster (*Jacobs v. Seward*). It would amount to an actual ouster if one tenant in common pulls down a party wall with no intention of rebuilding it, but not if he intends to rebuild it, although he might sell the old materials, and it is immaterial whether he pulls down the wall because it is past repair or because he desires to effect an improvement.

Where one tenant in common of a party wall is not liable to an action at common law for pulling it down, he cannot be restrained from so doing by injunction, but if damage is caused by negligence or unreasonable delay in rebuilding, he would be liable in an action for damages and it would be no defence to plead that he had employed a competent architect or builder (*Lemaitre v. Davis*, 1881 ; *Percival v. Hughes*, 1883 ; *Joliffe v. Woodhouse*, 1894).

Where one tenant in common of a party wall does some act which, whilst not amounting to total destruction of the wall, yet does partial damage thereto and thereby causes disturbance to his co-tenant, the latter could not maintain an action for trespass though he could one for damages (*Cubitt v. Porter*).

Neither of the co-owners of a party wall is entitled to underpin it unless it can be done without injury to the adjoining property (*Standard Bank of South Africa v. Stokes*, 1879). Since this decision, a building owner under the London Building Act, 1894, has a statutory right to underpin a party wall.

Where a party wall belongs to two adjoining owners as tenants in common the wall and every part of it so belongs and it cannot be claimed that there is any dominant or servient tenement or that one has an easement of support as against the other (*Mayfair Property Co. v. Johnson*, 1894). This particular case concerned a garden wall, or, as defined under the London Building Act, a party fence wall, and it was held that a tenant in common was entitled as a right to a partition of the wall under the old statutes of Henry VIII, and an order was made accordingly for partition of the wall longitudinally and vertically and for the execution of the proper mutual conveyances for the purpose. On partition the parties became separate owners, each of his own part, and entitled to deal with his own land and the portion of the wall built upon it as he pleased.

This old Act of Henry VIII has been repealed by the Law of Property Act, 1925, but the principle of partition and right of support has been re-enacted by Section 38 of this Act, but this is more for the purpose of simplifying the transfer of property. In any case, such right of partition within the area governed by the London Building Act, 1894, must be subject to the provisions of that Act.

Where a party wall has been erected at the joint expense of two adjoining owners, each contributing a moiety of the site, each would own a moiety of the wall in severalty and it would be considered as being two walls, but if the wall is a party wall by common user only the adjoining owners will only be entitled to it as tenants in common.

Where a party wall is owned in moieties in severalty either of the two adjoining owners may cut away or pull down his moiety of the wall (*Watson v. Gray*, 1880). The owner cutting away or pulling down his moiety is not bound to shore up the other moiety (*Vauxhall Water Co. v. Wandsworth Board of Works*, 1898), but he must use reasonable and ordinary care to prevent damage to his neighbour's moiety (*Bower v. Peate*, 1876 ; *Dalton v. Angus*, 1881), and should, as a precaution, before commencing the work, give notice to his neighbour to enable him to secure his moiety of the wall and any building depending thereon for support, although legally no notice is necessary. Under the London Building Act, 1894, notice for such work would be necessary.

Where the adjoining owners have mutual rights of lateral support, if one of them cuts away or pulls down his moiety he must not affect the others' right of support, and could be restrained by injunction, and would be liable for damages.

Where a party wall belongs entirely to one of the adjoining owners, but is subject to an easement in the other to have it maintained as a dividing wall between the two properties, the right is not confined to its maintenance as a dividing wall only as there will be also a right of user for the vertical support of his building.

Where one of two adjoining owners of a party wall held in several moieties adds to the height of the wall and the other pulls down the addition, the owner who erected the addition can maintain an action for trespass against the other for pulling down so much of it as stood on his half of the wall (*Matts v. Hawkins*). Under the London Building Act, 1894, there is a statutory right to raise a party wall.

Where the owner of a house grants to an adjoining owner a several moiety in one of his walls for the purpose of making it a party wall between his house and a house to be built on the adjoining land, such grant implies the reservation to both parties of such easements as may be necessary to carry out the common intention as to user of the wall which would vary with the circumstances in each case (*Jones v. Pritchard*, 1908). Each owner, in the absence of an agreement to the contrary, would only be obliged to repair his moiety of the wall.

The right of user for vertical support over the wall of an adjoining house will, in the absence of an express grant, be limited to the extent previously enjoyed, and an owner enjoying such right must not impose additional weight thereon, as if by so doing damage is caused, the Courts will award damages to the adjoining owner (*Hart v. Monarch Land Co.*, 1892).

Artistic Village Signposts.

An effort is being made to revive the movement for the display of artistic signposts in towns and villages. A most interesting specimen is the Ringmer signpost, which was unveiled by the American Ambassador (Mr. Harvey) in October, 1923. This village sign, besides indicating the distance of the village from Hastings, commemorates the names of William Penn, John Harvard, and other illustrious personages who were connected with the place.

The idea was revived at a meeting of the executive council of the Rural District Councils' Association, held at the Surveyors' Institution, Great George-street, Westminster. Mr. J. J. McIntyre, secretary of the Association, introduced the subject, and suggested that the Association might do something to forward the movement. He pointed out that the display of such signs, giving historical and other information would be a great boon to motorists and to all users of the roads. The suggestion was favourably received by the council, which represents practically all the rural district councils in England and Wales. While no resolution was before the meeting, the general view expressed was that the executive council should do all that they could to further the project, and it is probable that the matter will be brought to the attention of individual rural district councils.

THE LONDON BUILDING ACTS AND THEIR APPLICATION.—II

BY H. V. MILNES EMERSON, A.R.I.B.A.

Definitions (Continued.)

Note.—The interpretations of the definitions omitted from these articles have not given rise to any serious controversy and are therefore not given.

(8) The expression "level of the ground" means the mean level of the ground as determined by the District Surveyor, or, in the event of disagreement by the Superintending Architect or on appeal, by the Tribunal of Appeal.

Note.—The level of the ground is an important factor regulating the height of buildings. When the ground is sloping on the face of the building the point of intersection with the ground and centre of the building face is taken as "level of the ground." If also the ground slopes from the front to the back of the building, this "level of the ground" (apart from other circumstances) remains, and it is possible for such a building to be 80 ft. high facing a main street and to be over 100 ft. high at the back of the building facing another street.

(9) The expression "foundation," applied to a wall having footings, means the solid ground or artificially formed support on which the footings of the wall rest, but in the case of a wall carried by a bressummer, means such bressummer.

Note.—Rock chalk and gravel are often considered solid enough to allow the footings of a wall to be placed directly upon same. The artificially formed support is the concrete placed in trenches, or in made-up ground the arches or bressummers supported on piers, etc.

(11) The expression "ground story" means that story of a building to which there is an entrance from the outside on, or near, the level of the ground, and where there are two such stories, then the lower of the two:

Provided that no story of which the upper surface of the floor is more than four feet below the level of the adjoining pavement, shall be deemed to be the ground story.

(12) The expression "basement story" means any story of a building which is under the ground story.

(13) The expression "first story" means the story of a building which is next above the ground story, the successive stories above the first story being the second story, the third story, and so on to the topmost story.

(14) The expression "topmost story" means the uppermost story in a building, whether constructed wholly or partly in the roof, or not.

Note.—This definition is important as it regulates the thickness of the walls. For instance, a house of two stories (ground and first floor) would require thicker walls if rooms are constructed wholly or partly in the roof.

In the case of Foot *v.* Hodgson (25 Q.B.D. 160; 89 L.T. 27) it was held that two floors in a roof, one side of each of which floors was formed by a sloping roof and the other three sides by vertical walls, were stories within the meaning of Schedule 1 of the Metropolitan Building Act, 1885, and the above definition is in accordance with this decision.

(16) Party wall.

[*Note.*—See articles now appearing in *The Builder* on "Party Walls: Practice and Decisions," by J. Douglas Scott, A.R.I.B.A., for definitions and information on party walls.]

(17) The expression "cross wall" means a wall used or constructed to be used in any part of its height as an inner wall of a building, for separation of one part from another part of the building, that building being wholly in, or being constructed or adapted to be wholly in, one occupation.

Note.—A cross wall must be carried up to the floor of the topmost story.

(18) The expression "party fence wall" means a wall used, or constructed to be used, as a separation of adjoining lands of different owners, and standing on lands of different owners and not being part of a building, but does not include a wall constructed on the land of one owner, the footings of which project into the land of another owner.

Note.—As a party fence wall does not include a wall which is part of a building, it is therefore neither a "party wall" nor a "party structure" within the meaning of the Act. If a party fence wall is used in the construction of, say, an addition to the building, then such part of the wall used would become a party wall. See Note at the end of sub-section 16.

(21) The expression "height" in relation to any building means the measurement taken from the level of the footway (if any) immediately in front of the centre of the face of the building, or (where there is no such footway) from the level of the ground before excavation to the level of the top of the parapet, or (where there is no parapet) to the level of the top of the external wall or (in the case of gabled buildings) to the base of the gable.

Note.—See note to sub-section (8).

(22) The expression "area" applied to a building means the superficies of a horizontal section thereof, made at the point of its greatest surface, inclusive of the external walls and of such portions of the party walls as belong to the building.

Note.—It is important, in cases of conversion of buildings for part trade and part dwelling-house, to know how much of the party walls belongs to the premises to be converted, as this might just bring the area under or over that specified in section 74.

(25) The expression "dwelling house" means a building used, or constructed, or adapted to be used wholly or principally for human habitation.

(26) The expression "domestic building" includes a dwelling house and any other building not being a public building or of the warehouse class.

Note.—Part V of this Act does not include a building constructed for, or used as offices, as a "domestic building."

(27) The expression "public building" means a building used, or constructed or adapted to be used, as a church, chapel or other place of public worship, or as a school, college or place of instruction (not being merely a dwelling house so used), or as a hospital, workhouse, public theatre, public hall, public concert-room, public ballroom, public lecture-room, public library, or public exhibition-room; or as a public place of assembly, or used or constructed or adapted to be used for any other public purpose. Also a building used, or constructed or adapted to be used, as an hotel, lodging house, home, refuge or shelter, where such building extends to more than two hundred and fifty thousand cubic feet, or as sleeping accommodation for more than one hundred persons.

Note.—Section 8 of the London Building Act, 1894 (Amendment) Act, 1898, includes the buildings and premises of the Stock Exchange as a public building.

It has been held that an ambulance station maintained out of the rates and used for conveying cases to various hospitals, was not a public building (Josolyne *v.* Meeson, 53 L.T. 319). A dwelling-house of less than 50,000 cubic ft., used for housing 12 or 14 defective children by the London School Board in connection with the education of the children, was held not to be a public building. (83 L.T. 740.)

(29) The expression "owner" shall apply to every person in possession or receipt either of the whole, or any part of the rents or profits of any land or tenement, or in the occupation of any land or tenement otherwise than as a tenant from year to year, or for any less term or as a tenant at will.

Note.—It has been held that the expression "owner" as here defined includes—

The lessee of a house under a lease for a long term of years, different portions of which he had underlet to different tenants either on lease or as yearly tenants. (Hunt *v.* Harris, 12 L.T. 421.)

The lessee of a building used as a chapel, let to him on lease for 21 years. (Mourilyan *v.* Labalmondiere, 25 J.P. 340, and Wigg *v.* Lefevre, 8 *Times* L.R. 493.)

The owner of land let at a peppercorn rent is not an owner within the meaning of this definition. (Evelyn *v.* Whichcord, 31 L.T. (O.S.) 96.)

(30) The expression "occupier" does not include a lodger; and "occupy" and "occupation" do not refer to occupation by a lodger.

Note.—The term "occupier" or "lodger" is not defined in this Act. (For information see Bradley *v.* Baylis, 8 Q.B.D. 195; and Ancketill *v.* Baylis, 10 Q.B.D. 577.)

(31) The expression "building owner" means such one of the owners of adjoining land as is desirous of building, or such one of the owners of buildings, stories or rooms separated from one another by a party wall, or party structure as does or is desirous of doing a work affecting that party wall or party structure.

(32) The expression "adjoining owner" means the owner or one of the owners, and "adjoining occupier" means the occupier or one of the occupiers of land, buildings, stories, or rooms adjoining those of the building owner.

A tenant in possession of part of a house under an agreement for a greater interest than as tenant, from year to year, was held to be an "adjoining owner." (Fillingham *v.* Wood, 64 L.T. 46; also Hunt *v.* Harris, 12 L.T. 421, for this and "building owner" sub-section 22.)

THE DEMOLITION OF WEMBLEY

A CONSIDERABLE number of people (says the *Times*) have visited Wembley in the last few days, for, in the Civic Hall of the great Exhibition, a sale of office effects, electric lighting equipment, and kitchen fittings, and a hundred and one other things, has been taking place. Those who took occasion to wander down the broad avenues, and peep into the huge Palaces of Industry and Engineering and Art, must have felt a certain melancholy when they thought how the traces of the British Empire Exhibition are being removed. Bridges still span the artificial lake, great globes still crown the pedestals, Old London Bridge still exists, and the Mountain Caves loom forlornly, crowned by their battlemented towers. But the graceful lines of the Indian Pavilion no longer charm the eye; and Burmah, one of the most fascinating buildings in the whole Exhibition, has entirely disappeared. All the elaborate carved frontage, the splendid figure of Buddha, the gorgeous shrine, and the tinkly temple bells have been carefully packed away in crates and sent to Australia, where, however, they will be assembled, regain their former glory, and find a place in other exhibitions.

The Canadian Pavilion, one of the most imposing buildings in the great City of Wembley, looks as though it had been bombarded. The statues of moose and buffalo are crumbling, for they were but plaster cast, and a touch of the hand is sufficient to send them crashing from their plinths. Australia also is disintegrating. The beautiful Pavilion of New Zealand still stands, but its fate has been decided; it will be a dance hall somewhere in London.

The method of demolishing the buildings is to take down the walls, burn the plaster, and break up the floors and foundations of concrete by means of pressure drills and dynamite. The concrete is converted into hardcore, and is being used for road construction purposes. At the present time, 20 loads a day are being ent out, or something like 120 tons.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Profit-sharing Scheme.

[REPLY TO "PROFIT-SHARER," JAN. 7.]

SIR,—I note that your correspondent mentions foremen as coming under his proposed scheme, and I am wondering whether this is a practical possibility in other than secrecy. The foremen must, of course, be union men, and as such, I believe, are precluded from any position remunerated on any but a wage basis. If this is correct in assumption, the only way in which the scheme could be worked would be under the vow of secrecy on both sides, and this is an unhealthy atmosphere in which to work a scheme, the objects of which are obviously straightforward and well-intentioned. Your correspondent will not mind my raising a difficulty which may or may not be a real one.

DOUBTFUL.

SIR,—Can any reader put me in touch with a profit-sharing scheme applicable to an old-established builder's business which I am thinking of turning into a limited company? With the large amount of casual labour that is employed in the building trade I can see a number of difficulties, but there may be some reader who has a satisfactory scheme in operation, and who would not mind giving me rough particulars.

BUILDER.

Responsibility for Faulty Design.

[REPLY TO "RESPONSIBILITY," JAN. 14.]

SIR,—I am not competent to give a legal opinion upon the points raised in your correspondent's query, but arising out of the substance of his letter I would like to call attention to the small use made by architects of the services of engineering and other consultants in administering large contracts. The usual method of dealing with steel or reinforced construction is to employ a well-known firm of structural engineers to design and carry out the work. More often than not the firm includes members whose structural knowledge is the equal of any consultant in practice, but it must be understood that as sub-contractors their duties begin and end in the fulfilment of the architect's details and instructions, and the latter has to bear the full responsibility for any defects in the design of the steel structure. Actually the structural engineering firm is carrying out one of the duties of the architect in designing the steelwork, and receives no extra remuneration for it. By far the most satisfactory arrangement is the appointment of a consultant engineer, with the approval of the client, and he then assumes responsibility for the steelwork design, which is a real load off the already overburdened mind of the architect.

DEVOLUTION.

By-laws Relating to Buildings and Streets.

[REPLY TO "SCRUTATOR," JAN. 14.]

SIR,—"Scrutator" may be amused at an experience which happened to me a year or two ago. I had submitted plans for a Subsidy cottage in which I was particularly pleased to have arranged rooms of a surprisingly large floor area. The plans were returned to me as not complying with the by-laws, in that in two bedrooms there was not half the area of the room with a flat ceiling. It so happened that I could afford to bring in the ashlaring some 18 in. so as to comply in this particular, while still leaving the rooms big enough for Subsidy requirements. The Gilbertian situation was, therefore, that to respect a by-law framed to maintain air-space in a bedroom it was possible actually to reduce the air-space! I may say, however, that when this aspect was pointed out, the surveyor waived his objection, and the plans were passed.

PARADOX.

Question of Building Line.

SIR,—I deposited plans recently with the local authorities for additions marked No. 5A to premises marked No. 5 on plan, and the plans have been disapproved "inasmuch as the proposed additions would be erected in advance of the front main wall of the adjoining building, contrary to Section 3 of the P.H. (B. in S.) Act, 1888; this property, Nos, 1, 2, 3, 4 and 5, was originally five houses, but about eighteen years ago we built a one-story addition marked No. 1A to No. 1, and let this as a shop; the plans were approved at that time by the local authorities. The plans now disapproved are for an exactly similar addition to No. 5. My contention is that the building line of this street is definitely fixed by the buildings marked A and B, which I suggest are "the front main wall of the house or building on either side of the same," as defined by the Act, and that the local authorities are wrong in their contention that the main wall of the houses marked Nos. 2, 3 and 4 must be taken as "the building on either side thereof."

It is my intention to carry out the same additions to Nos. 2, 3 and 4 as and when they become vacant, as there will eventually be one straight building line between points A and B.

BUILDING LINE.

Dry Rot.

SIR,—Early last month I enquired through your columns for a cure for dry rot in a bungalow floor, or for something to arrest the decay. "Member" replied, "Get the R.I.B.A. pamphlet on dry rot." I got it, but it only gives information on how to take precautions against dry rot appearing. It does not fit my case at all, and I learn very little from it.

I am very doubtful if there is an answer to my query, but one never knows. Has any reader tried spraying creosote on rotting timber?

BUNGALOW.

[Our correspondent should consult the articles od the subject which have appeared in *The Builder* from time to time.]

Worm-eaten Oak.

[REPLY TO "LEVER," JAN. 14.]

SIR,—Soaking the panelling in paraffin will drive out the worms if they are alive. I have eried this method and have seen them actually tmerging within a few seconds after submersion. The paraffin will not damage the oak if the process is confined to a few minutes' duration.

BARRAGE.

MEETINGS

FRIDAY, *January* 21.

Royal Sanitary Institute.—Mr. A. E. Munby on "Elementary Science." 6 p.m.

Glasgow Architectural Craftsmen's Society.—Mr. S. C. Podmore on "Duties of a Clerk of Works." At the Royal Technical College. 7.45 p.m.

SATURDAY, *January* 22.

London Society.—Visit to the Magdalen College (Oxford) Mission, Somers Town, N.W.1.

Association of Architects, Surveyors and Technical Assistants.—Visits to Woolwich War Memorial Hospital.

Association of Architects, Surveyors and Technical Assistants (Midland Counties Division).—Visit to Repertory Theatre, Birmingham.

Institution of Civil Engineers.—Visit to the Tottenham Gasworks.

MONDAY, *January* 24.

Edinburgh Architectural Association.—Mr. W. Davison on "East Anglian Rural Churches and Their Decoration." 8 p.m.

TUESDAY, *January* 25.

National Federation of Building Trade Employers.—Annual Dinner. At Hotel Victoria, W.C.2. 7.35 p.m.

Royal Institution of Great Britain.—Mr. R. Whytlaw Gray on "Smokes as Aerial Disperse Systems." 5.15 p.m.

College of Estate Management.—Mr. G. Mould on "The Law of Mortgages." 5.30 p.m.

London University Lectures.—Mr. E. G. Richardson on "Acoustics of Buildings." At the University Physics Entrance, Gower-street, W.1. 5.30 p.m.

WEDNESDAY, *January* 26.

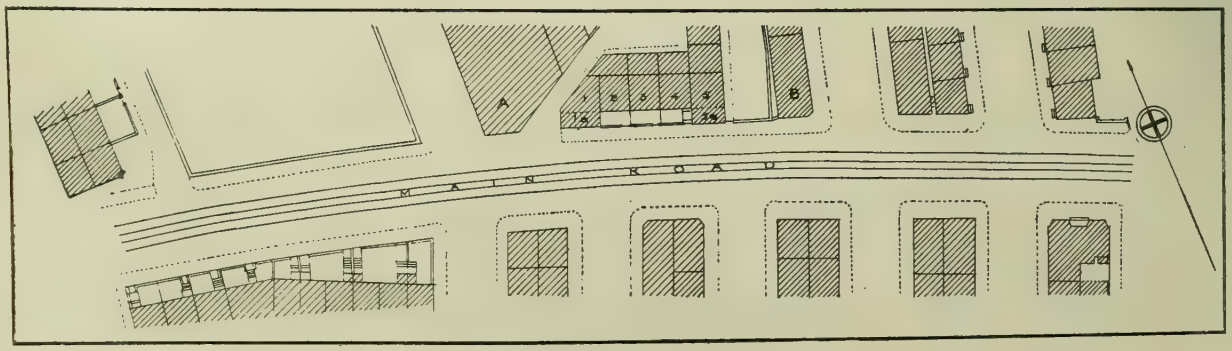
Liverpool Architectural Society.—Talk by Mr. P. Thomas on "Competitions."

Royal Society of Arts.—Mr. F. W. Spencer on "British and American Practice in Hot and Cold Working of Metals." At 8 p.m.

Royal Society of Arts.—Conference on the best means of preserving the Ancient Cottage Architecture of this Country and to inaugurate a fund for the purpose. At 18, John-street, Adelphi, W.C.2. 3 p.m.

THURSDAY, *January* 27.

Royal Institution of Great Britain.—Mr. J. R. H. Weaver on "Romanesque and Early Pointed Architecture in Spain (Eleventh to Thirteenth Centuries)." 5.15 p.m.



Society of Antiquaries.—Dr. R. E. M. Wheeler on "A Note on Roman Town Walls with Special Reference to Arles and London." At 8.30 p.m.

Northern Architectural Association.—Annual Dinner. At Tilley's Restaurant, Blackett-street, Newcastle-on-Tyne. 7 p.m.

Victoria and Albert Museum.—M. Emile Cammaerts on "The Spirit of Belgian Art." At South Kensington, S.W. 7. 5.30 p.m.

Association of Architects', Surveyors' and Technical Assistants.—Annual General Meeting. At Caxton Hall, Westminster, S.W. 1. 7 p.m.

Faculty of Architects and Surveyors.—General Meeting. At Memorial Hall, Farringdon-street, E.C. 5 p.m.

Question of Building Line.

THE BUILDING TRADE

BY-LAWS RELATING TO BUILDINGS AND STREETS.—III

IN our last article we referred to the observations of the Committee on Building By-laws that it was the statutory provisions under which by-laws are made which are responsible for some of the complaints that have been levelled against by-laws and the by-law system, and that the Committee expressed the opinion that restrictions of a technical kind, such as those which limit by-laws to certain members or portions of a building and by-laws as to walls to three special purposes, should be removed and some power should be given to enable local authorities by means of by-laws to exercise control in all matters which are of such a nature as to require control in the public interest and which are suitable subjects for by-law control.

The Report points out that the by-law system now in force has been gradually evolved, as the provisions in the Public Health Acts have, for the most part, originated in local Acts for the regulation of particular towns and districts, and at length the common form clauses were brought together in the general public Acts, the Public Health Act, 1875, and the Public Health Acts of 1890 and 1907, and this process in itself, we may observe, has tended to the divergence which still exists in by-laws in various districts, for the Report states that when the Local Government Act of 1858 was repealed by the Public Health Act of 1875, there was a saving clause in the latter Act as to by-laws made under the Act repealed, and that at the time the Committee made its report some 60 codes under the former Act were still in existence. Another cause contributing to lack of uniformity is the diversity of methods by which the existing statutes are put in force which the Committee characterised as most confusing.

The powers conferred by section 157 of the Public Health Act, 1875, come into operation by virtue of the statute and any of those powers can be conferred upon rural councils by order of the Ministry of Health. But under the Act of 1890 section 23, which is contained in Part III of that Act, is not in force in any district of itself. By section 3 an urban authority may adopt all the Parts II to V inclusive but as regards rural authorities the adoption of Part III of the Act, permitted by section 3, does not carry with it all the by-law-making powers contained either in the Act of 1875 or this Act. Section 23 subsection (3) gives them power to adopt the provisions of section 157 of the Public Health Act, 1875, as amended by this Act, as respects the structure of walls and foundations of new buildings for purposes of health (not, it will be observed, for securing stability and for the prevention of fires, as in section 157 (2)), also the provisions contained in section 157 of the Act of 1875 contained in paragraphs (3) and (4); that is to say, those relating to sufficiency of air space about buildings and the ventilation of buildings and with respect to the drainage of buildings and the closing of buildings unfit for human habitation, also those powers conferred by this Act (1890) in section 25 with respect to the structure of floors, the height of rooms to be used for human habitation, and the keeping of water-closets supplied with sufficient water for flushing, and adoption also confers the powers given by section 158 of the Act of 1875 as to the approval of plans for buildings and the removal of buildings erected contrary to by-laws. All other powers can only be obtained by order of the Ministry of Health under section 5.

The Committee rightly described this legislation as a "welter of confusion," the result of which is that while a rural council by adoption cannot acquire all the powers of the by-law-making section, but can do so by order of the Ministry, an urban authority can acquire all those powers by adoption of the whole of Part III, but cannot obtain the powers of section 23 alone. The Committee thought that this must have impressed the Legislature, for in the subsequent Act of 1907 the matter is differently dealt with, as in section 2 subsection (2) it is provided that on the application of the local authority (that is either urban or rural) the Ministry may declare any part of the Act or any section thereof to be in force in any district or contributory place. The recommendation of the Committee on this question was that as it was "making two bites at a cherry" to compel a local authority in the first place to apply to the Minister for by-law-making powers and then again to apply for confirmation of the by-laws when made, time and trouble would be saved and the effective control of the Ministry would not in any way be diminished if equal by-law-making powers were given to all local authorities by the direct operation of the authorising statutes, for the Minister would still have power under section 184 of the Public Health Act to confirm or refuse the by-laws when proposed and submitted for confirmation.

Before passing from the provisions contained in the empowering statutes as regards by-laws, we may refer to one other point raised by the Committee in their Report in connection with the definition of what is "a new building" as contained in section 159 of the Public Health Act, 1875. It is as follows: "The re-erecting of any building pulled down to or below the ground floor, or of any frame building of which only the framework is left down to the ground floor, or the conversion into a dwelling-house of any building not originally constructed for human habitation, or the conversion into more than one dwelling-house of a building originally constructed as one dwelling-house only" was to be deemed to be the erection of a "new building." Under the definition in this section it was held an addition to an old building did not constitute the building "a new building." Shiel *v.* Mayor of Sunderland (30 L.J.M.C. 215).

But section 23 of the Public Health Acts (Amendment) Act, 1907, provided that "For the purposes of this Act and the Public Health Acts and any by-laws made thereunder each of the following operations shall be deemed the erection of a 'new building': (*a*) The re-erection wholly or partially of any building of which an outer wall is pulled down or burnt down to or within ten feet of the surface of the ground adjoining the lowest story of the building, and of any frame building so far pulled down or burnt down as to leave only the framework of the lowest story; (*b*) the conversion into a dwelling house of any building not originally constructed for human habitation, or the conversion into more than one dwelling house of a building originally constructed as one dwelling house only; (*c*) the conversion into a dwelling house of any building which has been discontinued as, or appropriated for, any purpose other than that of a dwelling house; (*d*) the making of any addition to an existing building by raising any part of the roof, by altering a wall, or making any projection from the building, but so far as regards the addition only; (*e*) the roofing or covering over of an open space between walls or buildings." This section occurs in Part II of the Act which, as we have explained above, only applies where the Ministry on the application of the local authority has made an order.

In Rex *v.* Foots Cray Urban District Council (1916, 1 K.B. 246; *The Builder*, March 10, 1916) it was held by the Court of Appeal that where part of an old building is pulled down and a new portion erected the whole structure is not a "new building," but only that portion "wholly or partially re-erected," and notices and plans of the new portion need only be submitted.

The Committee had evidence given before it, and also referred to the celebrated case Governors of Repton School *v.* Repton Rural District Council (1918, 2 K.B. 133; *The Builder*, May 17, 1918) reported in the Court below (*The Builder*, November 23, 1917). In that case the by-law was made in 1902, and was in the model form at that time issued by the Local Government Board requiring every person who erected a new domestic building to provide in the rear of such building an open space exclusively belonging to such building of not less than 150 sq. ft. extending laterally throughout the entire width of such building. The School Managers were proposing to make an addition to the front of one of the school boarding houses, consisting of a projection three stories high containing a small room on each floor. The work had been commenced without depositing plans, but on the demand of the Rural District Council plans had been furnished, but the defendant Council had refused to pass them and had served a notice under their by-laws calling upon the plaintiffs to show cause why the addition should not be pulled down. After some correspondence the plaintiffs issued a writ against the Council claiming an injunction restraining them from pulling down the addition.

It will be seen that at the date this by-law as to space was made, following the model form, it would have been unobjectionable, for under section 159 of the Public Health Act, 1875, it would not have applied to an addition to a building, but the Act of 1907, having since been applied to the district, paragraph (*d*) had come into operation, making "any addition to an existing building by raising any part of the roof, by altering a wall, or making any projection from the building," a "new building" so far as the addition was concerned, and thus subject to the by-law under section 157 of the Act of 1875 relating to air space, yet if this by-law as to air space was treated as valid, it would be impossible to make any addition in front of an existing building or even to throw out a bay window. In these circumstances, both the Court below and the Court of Appeal held the by-law to be unreasonable and therefore invalid, but the Courts pointed out that when, owing to the passing of the Act of 1907, this by-law obviously became unworkable, the local authority could easily have taken steps to make by-laws which would be reasonable.

It is instructive to note how this question is dealt with in the model Rural by-laws now in force. The by-law runs: "In any case where a person executes any work which under paragraphs (*d*) and (*e*) of section 23 of the Public Health Acts (Amendment) Act, 1907, is deemed to be the erection of a new building, the foregoing by-law" (that is the general by-law as to deposit of plans, &c.) "shall apply so far only as regards the work so executed. Provided that this by-law shall not impose any requirement which would not have been required if the existing building and the new work were being erected together as one building . . ." The Committee added a comment on the Repton case and the by-law there in question, that the definition in the Act itself was so widely drawn that if it was literally read it involved the conclusion that a bay window or porch added to a building had not only to comply with the by-laws but with the statutory obligations, such as the provision of closet accommodation required by section 35 of the Public Health Act, 1875. We think this example strains the language of the section too far, but the Repton case illustrates two of the difficulties dealt with in the Report; firstly, that the definitions in the Acts conferring by-law-making powers, apart from the by-laws made under them, cause confusion. A definition in the statutes may be too wide, as in the Repton case, or it may be too narrow to secure a useful object; therefore, when the Committee recommended that equal by-law-making powers should be conferred on all

local authorities without distinction, considerable care will have to be exercised in framing the statutory provisions. We shall refer to this question again in our next article. The second point illustrated by the Repton case is the necessity of keeping by-laws up to date.

It is noteworthy that the Committee considered the amendment of the statutory definitions of what constitutes "a new building" a matter of urgency, yet though a Public Health Act was passed last year this matter was apparently overlooked by the Legislature.

In this article and the preceding one, we have confined our observations to the effect the by-law-making statutes have upon the by-laws made under them, and we have endeavoured to show that while a general amendment of the Acts would be undesirable if the Public Health Acts are consolidated, these by-law-making sections stand by themselves, and without objection could be amended, but in the following articles we hope to consider the question of by-laws from a wider point of view.

CONTRACTS UNDER SEAL: RECTIFICATION OF MISTAKES

WE think it may be of assistance to some of our readers if we call attention to a case reported at some length in the current issue of the Law Reports, W. Higgins, Ltd., *v.* Northampton Corporation (1927, 1 C.H. 128). The Corporation had put out for competitive tender a contract for the erection of 58 houses intended as workmen's dwellings, and in reply to the advertisement the plaintiff had applied for forms of tender, specifications, and bills of quantities, which were duly supplied to him. In the bills of quantities every item of the work to be done was specified and the quantity was described in yards and feet. In the bills of quantities there were two items, one for 321 yards 8 in. concrete wall and the other for 50 yards concrete blocks of ballast in chimney breasts and stacks. The bills of quantities dealt with the work to be done on the houses in pairs, there thus being 29 pairs to make up the 58 houses. The plaintiff, when preparing his tender, put the 321 yards of concrete wall at 22s. 6d. a yard, carrying out the total sum as £361 2s. 6d., and the 50 yards of chimney work he put at 42s. 6d., carrying out the total as £106 5s. The total estimate of his tender was £1,728 5s. 9d.

Before the tender was sent in he, in common with other tenderers, received a letter from the Borough Engineer, which, without the bills of quantities, cannot be very clearly set out, but which in the judgment was stated to mean, and to be understood by the plaintiff to mean, that the 50 yards mentioned in connection with the chimney breasts and stacks to be of concrete blocks had been included in the 321 yards of wall work so that what the tenderer was required to do in addition to the 321 yards of wall work was merely to make additions to 50 yards of it of such a nature that they would serve as chimney breasts. The plaintiff, instead of altering the two items affected by this change separately against the items, had calculated what the change would affect, and deducted the amount from the total of his tender. Thus the wall work having been estimated at 22s. 6d. and the chimney work at 42s. 6d., the difference was 20s. per yard, and this reduction should have been shown in the item for the chimney work, reducing that item by £56 odd; but the plaintiff in respect of this made a deduction from the whole tender price of £58 5s. 9d.

The Court pointed out that this was unfortunate, for it reduced the whole tender from £1,728 5s. 9d. to £1,670, and anyone not knowing the circumstances would have thought that the tenderer made this deduction merely for the purpose of making his tender a round sum, but, of course, the result was more serious than this, as when the work was measured up, if the quantities estimated for proved less this sum would be deducted twice over. This was what, in fact, appears to have happened, for the defendants credited the plaintiff with 271 yards of wall work at 22s. 6d. and the 50 yards of chimney work at 42s. 6d., and having credited the plaintiff with those sums, and all other sums he was entitled to be credited with, they deducted a sum which bore the same proportion to the total, £1,670, as the £58 5s. 9d. bore to the sum shown in the bills of quantities, £1,728 5s. 9d.

The plaintiff knew that the bills of quantities had not been altered, but he thought the matter could be set right at any time by reference to the letter of the Borough Engineer of January 6, but the contract had been drawn up and sealed and the Corporation insisted on their legal rights and the present action was brought claiming rectification of the contract so as to give effect to what it was alleged was the common intention of the parties at the time it was drawn up.

The Court intimated that it was very unfortunate for the plaintiff and an extreme hardship on him, but there was no power in the Court to rectify the contract. Under section 174 of the Public Health Act, 1875, the Corporation were incapable of entering into any contract which was not under seal, so that when the tender was made and accepted there was no contract come to by the parties as would have been the case but for that section. The sealed contract alone expressed the intentions of the defendants at the time when the seal was attached, and it was not like a case where there is an earlier parol contract between parties which when they attempt to put it in writing is a subject of a blunder. The Court pointed out that in this case the parties were not labouring under a mutual mistake, the onus of proving that would lie upon the plaintiff and no evidence had been given to that effect, but the learned Judge held that even this would have made no difference, and in support of this he cited an opinion expressed by (then) Mr. Justice Younger in the case Faraday *v.* Tamworth Union (1916, 86 L.J. (Ch.) 436), which, although in that case it was an *obiter dictum*, he approved. "The plaintiff asks for rectification. Now it appears to me even if there had been mutual mistake on the part of himself and the defendants that the difficulties in the way of rectification are in a case like the present very great, if not insuperable. Admittedly, such an agreement as this is only binding upon a Union like the defendant's if it be under their seal. But the defendants have attached their seal to no agreement in a form other than that which they have executed; and to rectify that agreement as executed and then make it binding upon them in terms other than those they have sealed would appear to me at present advised to have the effect of binding them to an agreement which requires a seal for its validity, but which they have never sealed." The Court was careful to point out that this was not a case like a contract for a sale of land, which it has now been settled can be rectified to conform with a previous parol contract, the difficulty here being that there was no parol contract at all—no contract of any kind—until the contract under seal was executed.

We give early prominence to this case to prevent parties from falling into a similar mistake. The Court expresed regret that it was unable to give relief to the plaintiff in respect to the *bona fide* and serious mistake made by him which had really been brought about by the carelessness of some official in drawing up the original bill of quantities. If it had been made clear in that bill that the 50 yards of chimney work were already included in the 321 yards of wall such a mistake would never have occurred.

THE HOUSING SUBSIDY

THE Ministry of Health has issued a circular to county councils, town councils, urban district councils, and rural district councils, dealing with the provisions of section 5 of the Housing (Financial Provisions) Act, 1924. The Minister has had under review the amount of the contribution payable to Local Authorities under that Act and the Housing, &c., Act, 1923, and in this connection has consulted with representatives of the London County Council, the Association of Municipal Corporations, the Urban District Councils' Association, and the Rural District Councils' Association.

The Minister, according to the circular, came to the conclusion that some revision of the amount of the Exchequer contributions ought to be made, and in accordance with section 6 of the Act a draft order varying the amount of these contributions has been laid before Parliament. A resolution approving of the draft order was passed by the House on December 2, and a copy of the order is enclosed with the circular.

In accordance with the provisions of the order—

(1) For houses completed before October 1, 1927, contributions payable by the Exchequer will be at the rates now existing—*i.e.*, for houses not subject to the special conditions of the Act of 1924 £6 a year for 20 years, and for houses subject to the special conditions of that Act £9 a year for 40 years, and in agricultural parishes as defined by the Act £12 10s. a year for 40 years.

(2) For houses completed between October 1, 1927, and October 1, 1928, contributions payable by the Exchequer will be at the following rate:—(*a*) For houses not subject to the special conditions of the Act of 1924, £4 a year for 20 years; (*b*) for houses which are subject to the special conditions of the Act of 1924, £7 10s. a year for 40 years, and in agricultural parishes as defined by the Act, £11 a year for 40 years.

It appears to the Minister to be desirable to take the opportunity of reviewing certain administrative aspects of the grant of assistance in respect of the provision of houses by both Local Authorities and private enterprise. The Minister is anxious not only that assistance to private enterprise should, as required by the Act, be restricted to a class of house the need for which could not be met without assistance, but also that the grant of assistance to the private builder should be directed so far as possible to securing the provision of a rather less expensive type of house than that to which builders have hitherto been giving particular attention, and that Local Authorities themselves should endeavour especially to devote themselves to the provision of a type of house which, with the aid of the subsidy, can be let at rents within the means of the less well-paid workers. The circular continues:—

"As regards private enterprise, it has been the practice of Local Authorities to prescribe a maximum cost or selling price for houses which they have been prepared to regard as eligible for subsidy. There have been variations related to local conditions, but the figure most commonly adopted has been that of £600 as the net freehold selling price of the house, exclusive of subsidy. With the experience which has now been gained the Minister has come to the conclusion that a figure of £550 as the net freehold selling price, exclusive of subsidy (or £625 inclusive of subsidy where a subsidy of £75 is given), should not now be normally exceeded. The Minister accordingly requests that Local Authorities will take the necessary action to give effect to this view by making it a definite condition of certificates issued after the date of receipt of this circular that the net selling price of houses included in such certificates should not exceed £550 (exclusive of subsidy), or where the houses are not to be sold that the gross cost should not exceed £625, where a subsidy of £75 is being paid. The Minister appreciates that many Local Authorities have in the past adopted lower limits than £600, and he desires to make it clear that it is open to any Local Authority for the future to adopt such lower figure than £550 as they consider appropriate to the circumstances of their district or to particular classes of case.

Where, with the approval of the Minister, a higher limit than £600 has previously been in force, the Minister will be prepared to consider any representations as to exceptional circumstances which the Local Authority feel it their duty to make with a view to obtaining approval of a slight increase in the maximum of £550 in particular cases. The Minister's special approval should be obtained before any such action is taken. It will be necessary for Local Authorities to review their current certificates. If a house for which a certificate has already been issued is not started within a reasonable time from the date of issue of the certificate it should be withdrawn. The Minister anticipates

that private enterprise will, by the erection of houses within the above limits, be able to make a material contribution to the need for working-class houses, and thus leave the Local Authority more at liberty to concentrate their efforts on the provision of houses for the less well-paid workers, a need which does not appear likely at present to be met in any other way.

The Minister believes that the contribution to be made by private enterprise to the provision of houses for the working classes can be considerably increased through the judicious exercise by Local Authorities of their powers in regard to the making of advances."

Copies both of the Order and the Circular may be obtained at H.M. Stationery Office, price 1d. each.

BUILDING TRADE WAGES

THE following Gradings and Regradings have been authorised by the National Joint Council for the Building Industry :—

GRADINGS.

To take effect forthwith.

South-Western Region.

Bovey Tracey ... graded B^2.
Teignmouth ... ,, B (Painters B^2).
Minehead ... ... ,, B^2 (Painters C).
Salisbury and Salisbury Plain District ,, B^3 (Painters C^1).
Truro ... ... ,, C.

REGRADINGS.

Midland Region.

To take effect on and from February 1, 1927.
Swadlincote from A^2 to A.
To take effect on and from April 1, 1927.
Leamington and Warwick from A^3 to A^2.

Southern Counties Region.

To take effect on and from April 1, 1927.
Southampton and Eastleigh from B to A^3.
Folkestone from B^3 to B^2.

Eastern Counties Region.

To take effect on and from April 1, 1927.
Brentwood from A^3 to A^2.
Norwich from B to A^3.

South-Western Region.

To take effect on and from April 1, 1927.
Cheltenham and Gloucester from B to A^3.

North-Western Region.

To take effect on and from April 1, 1927.
Kendal, Windermere, Ambleside, Keswick and Penrith from B^2 to B^1.

STANDARD RATES OF WAGES.

The Council has also decided that the Grade Rates now in force under the National Working Rules shall continue without variation until February 1, 1928. This decision does not in any way prejudice the consideration of applications now before the Council for "Exceptional Rates" to be fixed for certain towns and districts.

The Grade rates now in force are as follows:—

Grade Classifications.	London	District.	A	A1	A2	A3	B	B1	B2	B3	C	C1
Craftsmen	1/9½	1/9	1/8	1/7½	1/7	1/6½	1/6	1/5½	1/5	1/4½	1/4	1/3½
	Within the 12 miles radius	From 12–15 miles radius										
Labourers	1/4½	1/4	1/3¼	1/2¾	1/2½	1/2	1/1¾	1/1¼	1/1	1/0½	1/0¼	–/11¾

Some difficulties have arisen in Glasgow and a big area in the West of Scotland, says *The Times*, out of a movement to abolish travelling time for bricklayers and their labourers and to give them instead an increase in wage rates. This, if carried through, would have meant a departure from the terms of the national agreement under which wages are now determined in the building industry, and the question was examined by the council chiefly from that angle, though the precise effect of such a change on the local conditions was not ignored. It was decided ultimately to send a joint emergency commission to Scotland to inquire into the situation, and to decide what action, if any, can be taken in the matter without violating the current agreement. The general feeling in the council was naturally against the sanctioning of any local or sectional arrangements which might have awkward repercussions.

NEW BUILDINGS IN LONDON

Acton.—EXTENSION.—As the extension of the Acton Hospital has already proved to be inadequate, the Acton Hospital Council has had under consideration plans and an estimate for a further extension. Plans have been submitted in committee, and are to be sent to the King Edward Fund for approval. These plans illustrated an extensive scheme for the alteration and adaptation of much of the existing accommodation to provide for new developments, and also for new structural extensions. The estimated cost of the buildings and alterations are estimated at £24,000.

Crimscott-street.—FACTORY.—Messrs. Crosse & Blackwell, Ltd., are erecting new factory premises in Crimscott-street, Bermondsey, S.E.1. Messrs. Joseph, 2, Paul's Bakehouse-court, E.C.4, are the architects.

Exeter-street.—PREMISES.—Messrs. Nox, Ltd., builders, Praed-street, W.2, are the builders for the erection of an annexe to the Strand Palace Hotel, on a site on the corner of Burleigh-street and Exeter-street, Strand, W.C.2. The architect for the work is Mr. F. J. Wills, of 62, Oxford-street, W.1.

Lewisham.—SCHOOL.—The London County Council has forwarded plans to the Lewisham Borough Council for two further sites which have been selected for the erection of further elementary schools at Downham. The area of site No. 4 is approximately two acres and a school for about 800 senior children will be provided thereon. The school will be capable of enlargement, if necessary, by 160 places, and the area of site No. 5, which adjoins the Borough and County boundary, is approximately 2¼ acres. It is proposed to utilise this site for a school for about 880 junior children. This building will be capable of enlargement, if necessary, by about 128 places.

Manor-street. — BATHS .— The Wandsworth Borough Council have considered the report of the Special Sub-Committee appointed for the purpose of endeavouring to find a site in Clapham suitable for the erection of a public bath, and an area of about 36,200 sq. ft. situate on the eastern side of Manor-street, Clapham, with the main entrance in that thoroughfare about 100 yards from High-street, Clapham, and with a back exit to Edgeley-road, has been purchased. In order to obtain an entrance from Voltaire-road and thus materially increase the utility of the land as a bath site, the Council has provisionally agreed to the purchase of four houses adjoining the site, Nos. 145–151 (odd) Manor-street.

North End-road.— RECONSTRUCTION. — The Underground Railway are about to carry out the reconstruction of West Kensington station, which will be on the lines of those on the Morden extension. The exterior is being rebuilt with Portland stone. The plans have been prepared by Mr. A. R. Cooper, Chief Engineer to the London Electric Railway.

Queen-street.—PREMISES.—Messrs. W. H. Lorden & Son, Ltd., 107, Trinity-road, S.W. 17. are the builders for the new premises now being erected in Queen-street, near Southwark Bridge, E.C. Messrs. A. H. Kersey, F.R.I.B.A., G. A. Gale, A.R.I.B.A., & Spooner, of 91, Moorgate, E.C. 2, are the architects.

Russell-street.—SHOP.—A new shop is to be erected at 23, Russell-street, Covent Garden, W.C.2. Messrs. T. H. Adamson & Sons, of 145, High-street, Putney, S.W.15, are the builders, and Messrs. Crickmay & Sons, 13, Victoria-street, S.W.1, are the architects.

St. Pancras.—REBUILDING.—The London County Council are to rebuild the Brecknock elementary school to the plans of the L.C.C. Architect. The work is estimated at £34,758.

PRICES OF BUILDING MATERIALS

THE Inter-Departmental Committee appointed to survey the prices of building materials has again reported to the Minister of Health and the President of the Board of Trade. The Committee is charged to receive and consider complaints and to report as to the facts and "in particular as to the extent to which in any case the price appears to be unduly high by reason of the operation of any trade combination, trust, or agreement."

In the introduction to the report it is stated that the schedule shows the prices of building materials during the month of November, 1926. For purposes of comparison, the schedule includes also prices for April, 1914, and January, 1924. The period between May, for which month prices were last published, and November, corresponds roughly with the period of the coal stoppage, and as might be expected, those materials into the manufacture of which the use of coal largely enters are dearer.

Common bricks, apart from Flettons, show general rises of varying amounts. The prices of facing bricks have also risen, sometimes to a greater extent than those of common bricks. There has been a general increase in the price of Portland cement, it is stated, the rise in England amounting, with slight local variations, to 10s. per ton, and in Scotland to 15s. per ton.

Cast Iron Goods.—Rainwater goods show increases amounting generally to 12½ per cent., and baths have risen in price by 5 per cent. Prices of ranges have also gone up except in Scotland. In the Committee's Fifth Interim Report, reference was made to the special prices quoted for goods for housing schemes, supplied by members of the National Light Castings Association, and for the guidance of local authorities these special prices are now, where ascertainable, indicated in the schedule.

Glazed Ware.—Varying increases are registered in the prices both of w.c.'s and sinks, the increases in Scotland being higher than those in England.

The price of tiles has moved upwards in several districts. On the other hand, lead, the price of which, after falling up to May last, subsequently rose, now shows signs of again declining, the fall being most noticeable in Scotland.

While timber has increased in price in some districts, this is off-set by decreases in other districts. Prices of other articles do not call for special comment.

The Committee have carefully reviewed existing prices and having regard to the abnormal industrial conditions of the past few months, they are of opinion that it would not serve any useful purpose to analyse particular prices for the time being, but they propose to keep close watch over the movements of prices in the immediate future, and they will again review the position as soon as a period of stability has been reached.

All-Electric Restaurant

Recently there was formally opened on the corner of Savoy-hill and the Strand an all-electric restaurant, the "Tricity." This new resort will be of very great interest to architects and others engaged in interior decoration, for, in addition to the delightful decorative scheme of the restaurant, which was designed by Messrs. Imrie & Angell, the establishment is unique in that not only the lighting and heating, but the ventilation, refrigeration and, most important, the cooking, are carried out by electricity. Of particular interest are the lighting effects, secured by means of specially designed fittings with colour controls and by "Sun Ray" lamps, sunk into the roof, which diffuse through ground-glass screens an illumination closely resembling natural daylight. Heating is by means of "Sun Ray" lamps, which throw their beams upon the floors, and electric fans for ventilation are combined with a special apparatus for warming or cooling the air as required.

It is in the kitchens that electricity reaches its highest development, for there the large ovens, grills, and fryers carry on their work without combustion, flames, or fumes, and the chef has a complete control of temperature range for any purpose.

RATES OF WAGES IN THE BUILDING TRADE

Every endeavour is made to ensure accuracy, but we cannot be responsible for errors.

(For rates of wages in the Building Trade in Scotland, see page 143.)

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc.

JANUARY 24. — **Aldershot.** — JOINERY WORK. — Manufacture and delivery of doors, door frames, window sashes and frames, and other joinery required in connection with the erection of a further 124 houses by direct labour, for the Corporation. Borough Surveyor, Municipal Buildings, Aldershot.

PROPOSED NEW BUILDINGS & OTHER WORKS*

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

ABBEYLEIX.—The local committee appointed by the Laoighis Board of Health and Public Assistance, in connection with the proposed conversion of the old fever hospital buildings at Abbeyleix into a sanatorium, has been held in the board-room, Abbeyleix. It was decided to submit to the County Board of Health an estimate of the works.

ALTRINCHAM.—The plans of the County Architect have been adopted by the sub-committee for the provision of additional dining-room accommodation and extension of the central hall at the Girls' High School, estimated to cost £5,000.

ASKERN.—The West Riding E.C. recommend that a caretaker's house be erected at Askern Sutton-road Council school, at a cost not exceeding £650.

ASHTON-UNDER-LYNE.—The Housing Committee has decided to erect 92 houses on the Oakfield estate, Broadoak-road.

BARNET.—The Hertfordshire E.C. has decided (1) That it is desirable that a new secondary school for boys should be erected at Barnet in place of the existing Boys' Grammar School; and (2) that the chairman of the committee should be empowered to negotiate the acquisition of a site, six acres in extent, with a frontage of 160 ft. to Queen's-road, on which to build a new school.

BARNSLEY.—The Housing Committee has received a letter from the Barnsley Main Colliery Co., stating that they are prepared to sell the land opposite the Cundy Cross housing scheme, containing 11 acres, 3 roods, 26 perches, for the sum of £1,200. The C.B. resolved that application be made to the M.H. for sanction to a loan for the purchase of the land.—The Borough Engineer and Surveyor has been authorised to obtain tenders for the erection of three bedroom houses and two bedroom houses.—The Town Clerk is to approach the owners of certain land in Huddersfield-road, and Gawber-road as to the price they would be prepared to sell the land to the Council for building purposes.—The Borough Engineer and Surveyor has been instructed to prepare a lay-out plan in respect of the land at the top of Rowland-road with a view to the erection of additional houses.—The Borough Engineer and Surveyor has submitted plans and estimates for the provision of a movable floor at the Public Baths, and the alterations which it would be necessary to make to utilise the baths during the winter months for dances and public meetings, &c., at an estimated cost of £4,000. The Health Committee recommended that the plans be approved and that application be made to the M.H. for sanction to borrow £4,000 for the work.—Plans passed: House, Doncaster-road, Stairfoot, A. Whitehead; house, Doncaster-road, Stairfoot, H. & A. Field; house, Westville-road, A. Smith.

BECKENHAM.—The Council passed plans for houses: One in Manor-way, two in Arrol-road, a bungalow in Birkbeck-road, 24 houses in Upper Elmers End-road, and four houses in Villiers-road.

BELMONT.—Subject to the sanction of the M.H., approval is to be given to the erection, at an estimated cost of £300, in accordance with plan V. 4746, prepared by the engineer-in-chief, of a building at Belmont stables.—The M.A.B. recommend that approval be given to the renewal, at an estimated cost of £194 10s., of a portion of the oak boundary fence at Belmont laboratories.—Approval is to be given to the carrying out, at an estimated cost of £200, of the alterations to the Dutch barn at Belmont stables.

BINGLEY.—The West Riding E.C. recommend that the proposed extensions at Bingley Grammar School, at an estimated cost of £26,050, be approved.

BIRKENSHAW.—The West Riding E.C. recommend a new school for 220 pupils, at a cost of £6,600.

BLACKBURN.—The T.C. passed plans: House, Lammack-road, by J. H. Hargreaves; two houses St. Francis-road, by W. Baird; two houses, Tower-road, by J. Grimshaw; two bungalows, Tower-road, by J. Grimshaw; sub-station, Green-lane, by the Electricity Department; bungalow, Arterial-road, by D. Eckton; bungalow, Haslingden-road, by Jno. E. Stockdale; house, Queen's-road, by J. Grimshaw.—Mr. R. Livesey, of Greenbank Iron & Engineering Works, Blackburn, has contributed £100 to the Blackburn War Memorial Fund for a new wing to the Infirmary.

BLACKPOOL.—The C.B. has resolved that application be made to the M.H. for the sanction of the Ministry to the borrowing by the Corporation of £121,000 in respect of a main sewerage scheme.—The Borough Surveyor and Cleansing Superintendent are to prepare for submission, plans and estimates for the construction of additional underground public conveniences in the St. Chad's embayment, and also for the extension of the existing public conveniences recommended by the sub-committee.—The Council agreed to the use of a triangular plot of land at the junction of Grasmere-road and Condor-grove for the erection of a bus passenger shelter.—The Corporation are to increase the number of houses to be erected on the Hoo Hill estate, from 54 to 112 houses.—A scheme is also projected for the erection of houses in the Bispham area.

BODMIN.—The T.C. propose erecting 12 houses, in blocks of six, of the non-parlour type, on a site in Burnard's-lane.

BOLTON.—The members of the Danbhill Wesleyan Church are raising funds for the building of a new primary department and modernising the whole of the Sunday school buildings.

BRADFORD.—The T.C. passed plans for the following houses:—R. J. Patchett, Ltd., Harbour-crescent, eight; E. A. Gadie, Ennerdale-drive, nine; Fairbank Garden and Tennis Association, Ltd., Fairbank-road and Whitby-road, 16; E. Balmforth & Sons, Hastings-avenue, 22; Hutchinson & Scott, Westwood-avenue, six; Walter Farrer, Baring-avenue, four; Briggs & Hellewell, Moore-avenue, two; J. H. Smith, Norman-avenue, one; E. Hillam, Speeton-avenue, one; H. C. White, Bingley-road, one; T. Miller, Lodore-road, four; H. Farnish, Bolingbroke-street and Delamere-street, 10; H. Procter, High Park-drive, 10; Jesse Priestley, Hutton-road, five; Mrs. E. Robinson, Back-lane, Wibsey, two; E. Craven, King-street, Eccleshill, six; M. Robertshaw, Beatrice-street, one; John Bateson, Duckworth-lane, two; Foster Bros., Lynton-villas, 12; Walton Bros., Bryanstone-road, four; E. A. Gadie, Ennerdale-drive, two; E. Hillam, Speeton-avenue, four; Wm. Horne & Sons, Hutton-crescent, eight; Moorside-road and Pullan-avenue, eight; L. D. Sunderland, Westfield-lane, two; Shepherd Bros. and Brown, Poplar-grove, two.

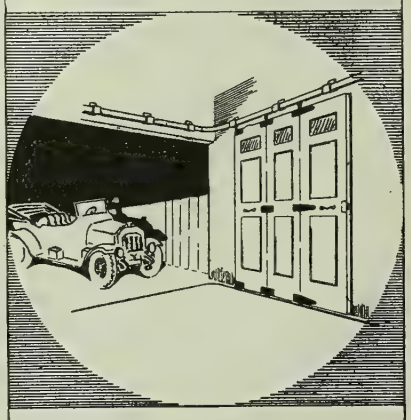
BRAY.—The U.D.C. are to urge the Great Southern Railway Company to rebuild the Marine Station Hotel, Bray, for which £13,000 compensation was awarded.

BRIGHOUSE.—The West Riding E.C. recommend that a scheme involving the provision at Brighouse of a Technical School and Boys' Secondary School, with joint use of certain rooms, the Secondary School to serve the same area as is served by the Brighouse Girls' Secondary School, be generally approved, at an estimated cost of £63,940. An estimate of £40,000 for the erection of a Technical School has already been approved by the County Council, and an additional estimate of £23,940 has therefore been forwarded to the West Riding Finance Committee.

BRIGHTON.—The Board of Management of the New Sussex Hospital for Women and Children, Windlesham-road, Brighton, has decided that the building of the new wing should be commenced at once, and a contract has been signed.

BROOK.—The M.H. has sanctioned the necessary expenditure on the provision of balcony accommodation on six ward pavilions at the Brook Hospital.

CAERPHILLY.—The members of the Wesleyan Church are raising funds for the erection of a new church hall, which is estimated to cost £25,000. The plans are being prepared by Phillips & Wride, architects and surveyors, 7, Pembroke-terrace, Cardiff.



CARDIFF.—On a recommendation by the Housing Committee, the City Engineer is to prepare designs for the erection of two-story flats in the Grand-avenue, Ely.

CARLISLE.—The City Council has decided to erect 150 more houses.

DUDLEY.—The Guardians have decided to purchase, at a cost of £330, 4,500 yds. of land adjoining the Poor Law Institution, and also to borrow £15,000 in connection with the new nurses' and maternity home now in course of erection.

DUNMORE.—The Galway County Board of Health has given notice of a scheme to erect a reservoir at Carromoscar South for storing water to be supplied to the town of Dunmore.

EALING.—On the recommendation of the Housing Committee, the T.C. has decided to apply to the M.H. for sanction to the borrowing of £16,650 for the erection of 30 houses at Hopefield estate, Hanwell.

ENFIELD.—The Enfield Housing Committee has decided to proceed with the development of the Albany site near Albany Park, on which site 500 houses are to be erected.

EPPING TOWN.—The main road from Epping Town to the Wake Arms is to be widened at a cost of £34,000.

EPSOM.—The R.D.C. are to invite tenders for the erection of another thirty houses at Old Common.

EXETER.—The City Council has decided to proceed with the provision of a further 108 concrete houses. Application is to be made for sanction to borrow £56,000 to cover the cost of erection.

FALMOUTH.—The T.C. propose erecting another 121 houses on the Penwerris site.

FARSLEY.—The U.D.C. has decided to erect 30 houses.

FELTHAM.—The U.D.C. passed plans: Twelve houses, Bedfort-lane, for Mr. How; two houses, Camden-avenue, for E. Banks.

FETCHAM.—The Corporation of Croydon is applying to Parliament for power to borrow £243,600, of which £240,600 is proposed to be expended in sinking a well and constructing a pumping station at Fetcham, with a line of aqueducts connecting with the Russell Hill reservoir of the Corporation. For the purposes of these waterworks it is proposed to acquire over 21 acres of common land, of which nearly 20 acres form part of Epsom Common.

FLEETWOOD.—A scheme of extension which has been approved for the Fleetwood Hospital includes the provision of three private wards, additional bedroom accommodation for the nurses, and extra cooking facilities.

FORMBY.—An inquiry has been held by the M.H. into the application of the Council to borrow £8,000 for the provision of new public offices to be erected on the Council site facing Freshfield-road. Plans have been prepared by Major Roome, the architect.

GOSPORT.—The M.H. held an inquiry into the application of the T.C. for sanction to borrow £15,000 for the reconstruction of the Town Wharf.

GREASBRO'.—Plans and specifications of the 28 houses proposed to be erected on Highfield-road were considered and the U.D.C. directed that advertisements inviting tenders for the erection of these houses be issued, and that such tenders be considered at a special meeting to be held on February 2.

GUILDFORD.—The R.D.C. are to build six cottages at Ripley.

GUISELEY.—Plans have been approved for new Wesleyan Sunday schools upon a site at Oxford-road.

HALIFAX.—The T.C. has decided to make application to the M.H. for sanction to borrow £6,975 to cover the estimated cost of erecting the 14 houses at Eaves.—The T.C. passed plans: A. P. Holdsworth, bungalow, Pellon New-road; F. Boothroyd, bungalow, Highroad Well-lane; A. Greenwood, bungalow, Edgeholme-road; L. Stansfield, bungalow, "Woodlesford," Moor End-road; H. Fearnley, house, Green-lane, Rochdale-road.

HASLINGDEN.—A proposal is on foot for the provision of new playing fields for the Secondary School, and the erection of a pavilion, estimated to cost £1,600.

HATFIELD.—The West Riding E.C. recommend the erection of a new school for 600 persons, at a cost of £18,000. The school will be in Doncaster-road.

HITCHIN.—The R.D.C. has approved the following plans: Cottage, for C. Chamberlain, Broom Barn cottage, for F. Thody, Broom Barn; pair of cottages, Knebworth, for the Earl of Lytton; house, Oakfield-avenue, Knebworth, for H. Crossley; bungalow, Shephall, for L. S. Overton.

HONLEY.—The West Riding E.C. recommend that, subject to the approval of the B.E. the site containing an area of 10.545 acres situate at Northgate Mount, Honley, be purchased from T. Brooke as a site for the proposed Secondary School at Honley.

HORBURY.—Plans have been approved for a new public-house for Messrs. Beverley Bros., Eagle Brewery Wakefield.

HORSHAM.—The West Sussex E.C. are to provide at the Horsham East Parade Council School, offices and playground, at a cost of £1,200.

HOVE.—The T.C. passed plans: G. Hutton, for H. H. Broomfield, bungalow Leicester-villas; F. A. Crouch, for C. W. Carpenter, pair semi-detached houses, Leicester-villas; E. J. Love, for D. S. Barclay, twelve pairs semi-detached houses, Braemore-road; B. James, for A. Chadwell, pair semi-detached houses, Princes-crescent.

* See also our List of Contracts, Competitions, etc.

HULL.—The M.H. has held an inquiry into an application of the Corporation to borrow £38,500 for telephone extension.

KINGSTON-ON-THAMES.—The Surrey C.C. has appointed a committee with regard to the extension of the County Hall.

KIRDFORD.—At a cost of £2,500, a new Council school is to be erected by the West Sussex E.C.

LEAVESDEN.—The M.A.B. recommend that, subject to the sanction of the M.H., approval be given to the provision, at an estimated cost of £150, of a covered way from the old nurses' home to the corridor adjacent to Block 11 at Leavesden Mental Hospital.

LONDON.—The M.A.B. recommend that approval be given to the carrying out, at an estimated cost of £195, of the alterations, &c., to the scullery and pantry accommodation in the maids' home at the Park Hospital.—The M.A.B. recommend that the plan now submitted of the proposed alterations to one of the existing buildings at the Mead Works, to form a timber store, be approved.

LONDON (COLINDALE).—The M.H. has forwarded the sanction to the borrowing of £8,550 in respect of the cost of the provision of additional accommodation for resident staff and the provision of single wards at Colindale Hospital, by the M.A.B.

LONDON (FULHAM).—The B.C. passed plans: W. J. Marston & Son, Western Hospital, Seagrave-road, new building (engineer's cottage); F. M. Kirby (Courage & Co.), 123, 125, 127 & 127A, Hammersmith-road, new garage and alteration to flats; S. Snell & Phillips, Fulham Hospital, Fulham Palace-road, additional building (new massage room).

LONDON (LEWISHAM).—The B.C. passed plans: E. A. Bawcutt, factory, Herschell-road; Leslie & Co., Ltd., nurses' home, High-street, Lewisham; S. T. Stevens, eight houses, Perry-hill; Wm. Wilmot, Ltd., four houses, Canonbie-road, and four houses, Forest Hill-road; J. G. Stephenson (for L.C.C.), 65 houses, Downham estate; G. Clothier, nine houses, Peak-hill, and four houses, Colingtree-road; F. A. Robins & Sons, eight houses, Sydenham Hill-road, and nine houses, Charles-street; A. Frampton, 12 shops, Bromley-road; W. J. Scudamore, Ltd., six houses, Dallinger-road; H. R. Watt, 10 houses, Crantock-road; Geo. Watt, two houses, Casslee-road, and 11 houses, Polsted-road.

LONDON (WANDSWORTH).—The M.A.B. recommend that, subject to the sanction of the M.H. and to the consent of the Wandsworth Guardians, approval be given to the proposed alterations to the superintendent's quarters at Wandsworth Casual Ward, at an estimated cost of £250.—The B.C. passed plans: J. S. Watkins, church on site at rear of premises in Balham High-road, and Elmfield-road, Balham; C. F. Kearley, Ltd., eight houses, Roehampton-lane, Putney; Swain & Selly, 53 houses in proposed roads, Nos. 1 & 2, Park-hill Estate, Balham, and two houses in Ansell-road; H. F. Buchan & Co., six houses and four garages on site adjoining No. 181, New Park-road, Streatham; Holliday & Greenwood, Ltd., L.C.C. school, Magdalen-road, Springfield; Mayal, Ltd., two shops and five houses, Streatham-vale, Streatham.

LONGFORD.—The Longford Board of Health Committee are to apply for sanction to borrow £4,300 for a scheme of repairs to the Longford County Hospital and County Home.

LOUGHBOROUGH.—The U.D.C. has passed the following plans: Two houses, King Edward-road, for F. H. Mee; house, Knightthorpe-road, for Mrs. Perry; two houses, Knightthorpe-road, for J. L. Ford; house, Corporation-road, for A. J. Wileman; two houses, Oliver-road, for A. Faulks.

MACCLESFIELD.—The T.C. passed plans: Two houses in Maple-avenue, by J. J. Millward & Sons; two houses in Chester-road, by Marsden & Knight; six houses to be erected in Congleton-road, by W. A. Taylor; two in Windmill-street, by G. A. Laidlaw; four in Nicholson-avenue, by Belfield & Lovatt; and two bungalows in Fallibroome-road, by Marsden & Knight.

MAIDSTONE.—The R.D.C. has passed plans: House on Ashford-road, Bearsted, for W. T. Corbett; house on Olive House estate, Loose, for C. G. Larking.

MANCHESTER.—The Lancashire Electric Power Co., 196, Deansgate, propose to carry out the erection of a new electricity station at Kearsley.

MIDDLESBROUGH.—The T.C. passed plans: House at the corner Appleton-road corner, next Reeth-road, for N. Thompson; three pairs semi-detached houses, Westbourne-road, for T. Duncanson; pair semi-detached houses, Arlington-road, for Price & Jones; lay-out of building land on building estate, bounded St. Barnabas-road on the north, Lewis-road on the east, Chipchase on the south, Roman-road on the west, for owners of Middlesbrough Estate, Ltd.; three houses, Tavistock-road, corner German-road, for A. Sweeting; two pairs semi-detached houses, Harrow-road, for Thompson Bros.

MIDDLETON.—The T.C. has approved plans submitted by the Borough Surveyor, Mr. Harrison, for the erection of 158 smaller type houses on the Boardshaw North Housing estate.

MITCHAM.—The U.D.C. passed plans: E. J. Peacock, nine houses, Streatham-road; E. V. Wilson, five houses, Lilian-road, three houses, Leonard-road; Stanley Dale Estates, Ltd., 24 houses, Langdale-avenue; Selected Estates Co., house, Seeley-road; Fulfords, Ltd., house, Beckway-road; J. Pascall & Sons, factory building; H. Seale, nine houses, Lewis-road; E. J. Peacock, nine houses, Streatham-road.

MOLESEYS.—The D.C. has been informed that the M.H. has confirmed the Order which the Council sought to purchase land at West Molesey for another housing scheme.

NEWBURY.—The T.C. has decided upon the erection of 80 houses on a site between Newtown-road and Monks-lane. The estimated cost of the scheme is £40,000. Application is to be made to the M.H. for sanction to the borrowing of £1,825, for the purchase of the site.—Approval has been given to a recommendation of the Estates Committee for the erection of a band-stand at Greenham House.

NEWCASTLE.—Plans for the re-building of the Westgate Picture House on the present site and most of the adjoining site between the building and Cross House have been also approved by the Newcastle Licensing Justices. The application was submitted by T. H. Smirk.—An application for the extension of the licence of the Eldon Grill, Grey-street, to cover an adjoining shop which it is proposed should be incorporated with the existing premises, was granted by the Newcastle Licensing Justices. The owners are Messrs. F. M. Laing & Co.

NEW MALDEN.—The D.C. have approved a scheme for the erection of more flats in California-road.

NEWRY.—Newry No. 2 R.D.C. has adopted a scheme for the erection of 68 labourers' cottages, at a total estimated cost of £25,240.—Newry No. 1 R.D.C. give notice that they have made an improvement scheme under the Labourers (Ireland) Acts at an estimated cost of £37,300.—Sligo County Board of Health give notice of a similar scheme, to cost £10,564.

NORTHALLERTON.—The North Riding C.C. are to erect on the north side of Racecourse-lane, adjacent to the County Hall, new buildings. The buildings have been designed and will be erected under the supervision of J. R. White, the County Archiect.

NORTH ELMSALL.—The West Riding C.C. recommend that an area of five acres be purchased from the Upton Colliery Co., Ltd., as a site for the North Elmsall Harewood-lane proposed new school.

OLDHAM.—The C.B. passed plans: R. Whitehead, 35 houses, Walkers-road, Redfern-street, and Oak-road; T. C. Lees, 10 houses, Ripponden-road, Moorside; J. Wrigley, four garages, Clyde-street; J. & B. Whittaker, 15 houses, Clovelly-avenue, Milford-avenue, and Lynton-avenue.

PENZANCE.—The T.C. has under consideration the acquiring of two sites for housing purposes.

PLYMOUTH.—Plan and estimate of £250 for a passenger shelter at the Compton terminus were submitted and approved by the T.C.—The Council has approved provisionally the appropriation of a site below Greatlands-crescent at North Prospect for the purpose of a public library.—The sanction of the M.H. to the borrowing of £14,450 for the provision of additional accommodation at the Tinside Bathing-place, has been received, and the Borough Surveyor has been instructed to invite tenders for the carrying out of the work.—Application is to be made to the M.H. for sanction to borrow the sum of £17,770 for the erection of three blocks of buildings each containing 12 flats of brick and/or concrete construction and for a road and sewer at Mount Stone.—A committee has inspected the properties at the rear of the Guildhall in connection with the suggestion from the Watch Committee that the site should be cleared of the dilapidated buildings, and the Council resolved that the Office Accommodation Sub-Committee submit a report on the question of providing, as part of a larger scheme, office accommodation on the land already in the possession of the Corporation at the rear of the Guildhall.—Application is to be made to the M.H. for sanction to borrow the sum of £7,097, for the erection of 15 flats at the corner of Battery-street and George-place, Stonehouse.—The following sanctions to loan have been received: E.C., £1,709, conversion of Keppel-place school; £2,338, roads. Public Health Committee—£1,022, provision of lavatory block at Didworthy Sanatorium.—Plans passed: E. J. Manning & Son, four houses, Beacon Down estate; E. Holmes, eight houses, Hillcrest-avenue; Mrs. Furneaux, house, Tavistock-road, Hartley; D. Fredman, three garages rear of Hartley Lodge, Eggbuckland-road; W. H. Joce, two houses, Hartley Park Gardens; E. J. Manning & Son, two houses, Weston Park-road; G. A. Bradford, two houses, Victoria-road, St. Budeaux.

REIGATE.—The T.C. passed plans: Detached house, Gatton Point, for Mrs. F. Boldero; house, South Park, for Miss A. M. Winter; pair of houses, Althorne-road, Redhill, for C. D. Wellicome; house, Waterlow-road, High Trees estate, for Hayden & Randall; cottage, rear of Old Barn, for Lees Stenning.

RUNCORN.—The R.D.C. are proposing to erect a new Council Elementary School at Kingsley to serve the parishes of Kingsley and Newton-by-Frodsham.

SOUTHAMPTON.—A sum of approximately £50,000 for the purpose of founding an almshouse charity for women has been left to trustees under the will of Mr. James John Wilkie, of Westwood-road, Southampton, formerly superintendent registrar for the Elder Dempster Company.

SOUTHGATE.—The U.D.C. are to have plans and estimates prepared for the erection of new public baths on the site north of Bowes-road, New Southgate, which has been purchased by the Council for the purpose.

SOUTH SHIELDS.—The T.C. has accepted an offer of the liquidators of the Tyne Dock Land Co. to sell to the Council for housing purposes the portion of land lying between Dean-road and Tyne Dock Station, comprising 56,806 sq. yds. The Council has agreed to recommend £8,960.

SUTTON COLDFIELD.—The T.C. passed plans: Pair of houses, Birmingham-road, for W. J. Phillips; house, College-road, for C. J. Crees; house, Rectory-road, for W. Walker; bungalow, Stonehouse-road, for H. Doidge; bungalow, Stonehouse-road, for H. Lovatt; bungalow, Jockey-road, for — Freedman; house, Jockey-road; for F. Spencer; house, Jordan-road, for W. Hastilow & Son; pair of houses, Walmley Ash-road, for W. A. Frost.

SWANSEA.—The C.B. has resolved that the Town Clerk be instructed to make formal application to the M.H. for sanction to the borrowing of £84,100 for the new isolation hospital at Hill House.—The Borough Architect has been instructed to prepare the necessary plans and particulars for the Town Clerk to make application to the M.H. for sanction to the borrowing of £3,000 for the open-air bath at Llewelyn Park.—Plans passed: Four houses, The Mayals, for E. W. Saunders; two houses, Prospect-place, Sketty, for W. T. Humphreys; two houses, Townhill, for T. & G. Spragg; house, Parcwern-road, for Dan Griffiths; house, Lon Masarn, Tycoch, for James Bros.; six bungalows, Goitre Fach-road, Killay, for G. R. Thomas; bungalow, Waunarlwydd-road, for Ivor Beddow; two houses, Prospect-place, Sketty, for G. W. Rott; two houses, Cockett-road, for Sid Davies; two houses, housing site off Carmarthen-road, Fforestfach, for T. M. Jones; eight houses, Grenfell Park estate, for J. R. Banfield & Son; 12 houses, Grenfell Park estate, for Jones Bros.; two houses, Fern-street, for Rogers & Davies; two houses, Carmel-road, for Wm. Philips; house, Carmel-road, for F. J. Williams; bungalow, Danygraig-road, for S. Dowleswell.

TIVERTON.—The R.D.C. has decided to proceed with three more housing sites.

TUNBRIDGE WELLS.—The T.C. has decided upon further housing schemes on the Ashley Park site, Rusthall: two more concrete houses (non-parlour type), at a total cost of £1,150, at the western end of Ashley Park-road; 20 semi-detached houses; two blocks of flats, each containing four dwellings, consisting of living room, scullery, bathroom, and two bedrooms. Tenders are to be invited for the erection of the semi-detached houses and flats, subject to the scheme being sanctioned by the M.H.

UPPER BRYNAMMAN.—A site has been obtained for the erection of new premises for the Co-operative Society.

WAKEFIELD.—The R.D.C. has decided to erect 26 houses upon a site at Crofton, and to consider a scheme for the erection of another 20 houses at Crigglestone.—The West Riding C.C. recommend that the General Purposes Committee be authorised to provide double windows in Committee Rooms B and C at the County Hall, by means of casement windows inside the existing windows, at an estimated cost of £383.—The West Riding C.C. recommended that, subject to satisfactory contributions being obtained from central funds and from the L.M. & S. Rly. Co., the West Riding Highways Committee be hereby authorised to expend a sum of not exceeding £36,730 in widening and diverting the Wakefield and Castleford main road, and constructing a bridge to carry the said main road over the railway of the L.M. & S.R. at Warmfield.

WALTON-LE-DALE.—The Highways Committee has approved plans for the erection of an electricity station in St. Mary's-road, Bamber Bridge, for the Lancashire Electric Power Co.

WATH.—The West Riding E.C. recommend the erection of new buildings for a secondary school to provide accommodation for 540 persons, at a cost of £41,050, including £750 for the caretaker's house. The Committee also recommend that the fencing of the above site be carried out at an estimated cost of £280.

WEARDALE.—The R.D.C. is to consider a scheme for 12 houses at Wolsingham.

WEST HARTLEPOOL.—The T.C. has passed plans: J. J. Dobson, two pairs of semi-detached villas, Westbourne-road; H. Kitchen, house, Elwick-road; J. H. Garry, pair of semi-detached houses, Stockton-road; W. H. Loveridge, three pairs of semi-detached villas, Bolton-place, Seaton Carew; P. H. Gamlen, bungalow, rear of "Chez Nous," Stockton-road; T. Whitear, four houses, Greta-avenue, and four houses, Oakland-avenue; Sir W. Gray, house, Tunstall Park estate.

TRADE NEWS

New Telephone Number.

The telephone number of Mr. S. M. Barr, importer of foreign hardwoods, is now, we understand, Avenue 6148-6149.

New Markets for British Goods.

"See British Goods First" is the New Year message addressed to retailers by manufacturers who are shortly to display their newest products at the heavy section of the British Industries Fair, to be held in Birmingham, from February 21 to March 4. The schedule of British goods displayed exclusively at the Birmingham Section comprises engineering, building, power plant, machinery, hardware, ironmongery, and the "heavy" industries in general.

"The Roadmaker."

The current issue of "The Roadmaker," issued on behalf of the British Reinforced Concrete Engineering Co., Ltd., contains a further article of an interesting series on "Imposing Streets"—this month's subject being the Via Nazionale, Rome. Mr. A. N. Lansdell also continues his "Romance of Roadmaking," while there are several contributions dealing with the practical side of roadmaking.

Pressure Pumps.

We learn that an order has been placed by the L.&N.E.R. with the Pulsometer Engineering Co., Ltd., of London and Reading, for the supply, delivery and erection of electrically driven hydraulic pressure pumps, return water pumps, meters, pipes, valves, &c., for their No. 1 pumping station, at Alfred-street, Kingston-upon-Hull. This firm recently supplied similar plant to the G.W.R. for their Cardiff docks.

Household Electrical Appliances.

We have just received from the General Electric Co., Ltd., Magnet House, Kingsway, W.C. 2, an attractively compiled booklet, entitled "Magnet Household Electrical Appliances," giving illustrations and details of what is practically a complete range of ordinary household electrical appliances which this well-known firm manufacture, which will be of great interest to builders and constructors who are developing new housing areas.

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Grangemouth.—HOUSES.—The Dean of Guild Court has granted warrant to the Town Council to build 52 houses—16 of two rooms and kitchen and 36 of one room and kitchen. The 16 houses are to cost £409 each and the 36 houses £363 each. Formal warrant was also given in connection with one block of four flatted houses which are being erected under the owner-occupier scheme. The Court also granted application by Grangemouth Bowling Club to add a wing to each end of the existing pavilion at the bowling greens.

Falkirk.—HOUSING.—The Eastern District Committee of Stirling County Council has approved a recommendation from the Housing Sub-Committee to proceed with a further scheme for the erection of 200 houses.

Dundee.—HOUSES.—The Housing Sub-Committee of the Town Council has decided to recommend the Council to proceed with the erection of an additional 500 houses, to be allocated as between ordinary housing schemes and slum clearance areas.

Ayrshire.—BUILDING.—The Carrick District Committee of the Ayrshire County Council has received the Board of Health approval to the Patna building scheme, and the County Finance Committee has approved of the loan of £5,000 for the purpose.

Edinburgh.—COTTAGE.—The Dean of Guild Court has granted warrants for the erection of a double cottage at Brunstane-road, Joppa; bungalow at Old Kirk-road, Corstorphine; and a bungalow at Corbiehill-road, Davidson's Mains.

Glasgow.—INSTITUTION.—A site has been obtained in Pitt-street for the erection of a national commercial college.

Dunfermline.—BUILDING.—The Dunfermline Town Council has received the Scottish Office approval to a proposal to erect headquarters for the city police on a site in Carnegie-street.

Edinburgh.—SHELTER.—The Convenors of the Cleaning and Lighting, Tramways and Public Parks Committees of the Town Council have agreed to recommend the erection of a shelter at the tramway terminus at Liberton. The building will comprise a shelter, lavatories, and a house in connection with the Public Parks Department.

Ayr.—SLUM CLEARANCE.—The Town Council has decided to allow the reconstruction of certain back properties in High-street.

Inverness.—HOUSING.—The Inverness Housing Committee of the Town Council have held a meeting with the local architects for the purpose of adjusting conditions for the submission of competitive plans and estimates for the erection of another 100 Corporation houses.

Bridge of Allan.—HOUSES.—The Town Council has reported that the local authority had received the sanction of the Scottish Board of Health to build twelve additional houses at Hungry Kerse.

Dunoon.—HOUSES.—The Town Council has agreed to a scheme for the erection of two tenements of three and four-apartment houses at Hamilton-street. The Board of Health has approved of the plans, and the buildings, which will cost fully £5,000, will be proceeded with.

Nairn.—SCHOOL.—Offers have been provisionally accepted for the erection of a new school for Nairnshire Education Authority at the Academy. The total amount of the accepted offers is £16,965.

Lanarkshire. — PREMISES. — The following works are in prospect in Lanarkshire: Proposed new dairy premises at Wishaw for Scottish Wholesale Co-operative, £30,000; plans for hall for Dalziel U.F. Church, Motherwell; plans submitted for new R.C. school at New Stevenston, £50,000.

Aberdeen.—HOUSING.—Thirty-six plans have been approved by the Plans and Sewerage Committee of the Town Council. Nineteen were for the erection of houses at a cost of £20,400, and 17 for other buildings and alterations and additions to existing premises at a cost of £25,121, making a total cost of £25,521.

BUILDING TRADE WAGES IN SCOTLAND.*

THE following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

Plasterers' Council.

"To uplift and improve the conditions in the plastering craft" is one of the objects for which the National Joint Council for the Plastering Industry has been formed. This and other reasons are given in a booklet just published, which contains the standing orders of the council. The council is composed of representatives of the National Association of Master Plasterers and the National Association of Plasterers, Granolithic and Cement Workers, and the constitution provides for the formation of local joint committees to carry out the objects which the council seeks to achieve. It will deal with all matters effecting the industry, and provide a medium and machinery of conciliation and negotiation, whereby, it is hoped, disputes may be adjusted or avoided. Further objects are to eliminate "shoddy" work and co-operate in providing technical education for bona-fide students in the industry.

THE BUILDER

A JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

VOL. CXXXII.—No. 4382. JANUARY 28, 1927

THE ARCHITECTS' AND SURVEYORS' DEFENCE UNION

THE idea is not new for the members of a profession to band together to form an association for mutual assistance and collective defence of their status, prestige, privileges, and means of livelihood against attack or encroachment from outside influences ctively or automatically operating. For instance, the medical rofession has long ago organised such an association; and f one of its members is threatened with libel, slander, or a harge of professional negligence, it is the function of the associaion to assist him to put up an adequate defence, employ expert egal advisers and pleaders, and, in effect, to endeavour by all neans possible to prevent harsh legal decisions, or the establishnent of such penalties as do not take into consideration that margin must be allowed for accidents beyond the limit of rdinary or average human foresight and care.

Recently, there has been formed, for similar reasons and urposes, an association of the allied building professions, esignated the Architects' and Surveyors' Defence Union. he project aims to provide an insurance against misfortune vhich may come to any one of its members in the course of his rofessional practice through no fault or lack of average skill n his own part; and, by the co-operation of many subscribers, o assure a maximum degree of security against such misfortune t a minimum cost to each. The four-fold objects of the union s set out are briefly:—

(1) To defend actions brought against members for professional negligence, default, or error.

(2) To recover fees earned by members in the exercise of their profession where the recognised scale has been brought to the notice of their clients on the receipt of the original instructions.

(3) To support or defend actions for libel or slander brought by or against members in the exercise of their profession.

(4) To support actions brought by members to defend their ownership of the copyright of their designs.

It is sought to attain these ends by insurance with an pproved society, the insured being protected to a maximum ability of £5,000; though liability for the first £25 of each laim for fees (it is stated) will rest on the insured himself. he indemnity offered does not extend to the litigation expenses f the successful litigant when the Court direct these to be aid by the insured when he is unsuccessful. And of course, ll claims, either by or against the insured, must be put forward uring the period of insurance.

It will be the duty of the Special Board of the Union to onsider the merits of all claims before these are taken up by he Union officially, and to this Board is entrusted the admission f applicants to membership of the Union.

This movement looks for the support of all practising archiects and surveyors, if only because the greater the number of iembers the more advantageous will be the terms made with ie Insurance Corporation which has undertaken the matter, nd consequently the cost to individuals by way of subscription ill be reduced to a figure which will appeal to all.

The registered offices of the Union have been opened at 28, edford-square, W.C.1, where already, since the inaugural ieeting which was held in December last, both response from ithout, and organisation within, have shown a vigour which romises the provision of security against what were recently ermed "the nightmare risks" which are evoked by the existing ate of the law relating to the practice of architects and surveyors, coupled with the complications which have more ecently arisen in the building trades generally.

For some time past we have been, and we still are, devoting considerable space in our columns to the setting forth and explaining of some of these "nightmare risks" as they concern the members of both professions and also contractors. We have realised how often "forewarned" would have spelt "forearmed" when disputes have arisen regarding "negligence" as at present construed by the Courts; although it must not be forgotten that the law does afford, as far as possible, protection to anyone from attack which seeks to discredit him to the extent of materially injuring his freedom to practise his trade or profession. That is to say, that an extensive degree of negligence must be proved to establish a charge of criminal neglect. In fact, the criminal charge practically depends on substantial proof that the individual accused was not, at the time of the default, able to exercise, or possessed of, the degree of skill normally required for the work he undertook to do. As there are obviously many cases in which this question of equipment or fitness would raise arguable points, the assistance of the Defence Union would be a veritable rock under the feet of one facing the graver charge. Negligence in law is, briefly, the failure of a person to have foreseen the natural consequences of his actions (omission or commission) when these actions have caused damage, or loss, to those seeking redress in the Courts.

We suggest that the Defence Union might go farther and seek to establish a general council to safeguard the interests and prestige of the building professions (again following the lead of the Medical and Surgical professions)—a council having judicial, and not merely ministerial, functions; able and authorised to deal also with those within the ranks whose conduct is likely to call down on the profession disrepute or dishonour, or to detract from the confidence of the public. A step in this direction was recently taken by the R.I.B.A., who drafted and approved a Bill for enforcing the registration of architects, as a matter of public policy. We feel, however, constrained to remark that some clauses of this Bill, as now submitted, might have had more careful attention, as they are, in their present form, almost certainly doomed to criticism and amendment by the Legislature.

To come into harmony with the "mind" of English law, the right should be secured to the arraigned that he shall be allowed to appear and plead on his own behalf, or employ counsel to safeguard his legitimate rights, before any definite reprimand is formulated. Otherwise, a Council would become a court of inquisition, and its powers open to intrigue and abuse. In fact, such a Council should have as its primary aim the protection of the community it represents, the censoring of delinquents being secondary. There is a proposal that the delinquent may claim the right of appeal to the High Court during the three months following his being reprimanded by the Council. But if that reprimand is already made public, and especially if it has been formulated in the absence of proper defence on his behalf, the loss of reputation and prestige might well be such as to cripple his practice for all time, before the appeal to the High Court would restore him, if innocent.

The consequences of the establishment of such Unions and Councils as we have now been considering do not only affect the communities which, in the first instance, call them into being largely for self-protection; one inevitable result is a more careful consideration of the details of equipment essential to the success of their individual members. For instance, the experiences of these bodies in the discharge of their functions teach the need of some adequate training in business methods and legal knowledge for all architects and surveyors as part of their academic course—equipment which would enable them not only to superintend the carrying out of design, but also intelligently to see an undertaking through to a conclusion, without unnecessary dispute or disappointment to anyone concerned.

NOTES

Shakespeare Memorial Theatre.

THE open competition for the new Shakespeare Memorial Theatre should attract a good many competitors, for the labour involved in the competition is not excessive, and the problem set is one compounded of practical planning with ample scope for imaginative artistic handling. That we shall find a happy combination of the two we perhaps hardly dare to hope, but if a working partnership between those capable in both directions could be arranged, one might for once secure an unqualified architectural success.

An Improved Outlook.

THE Advisory Committee may, we think, be congratulated upon the plans they have recommended for the rebuilding of the Theatre. The intention is to attach a new building on to the old, with its frontage looking towards Clopton Bridge, a site which, in view of the preservation of the bridge and the sweeping away of certain unsightly buildings standing between the bridge and the Bankcrott Gardens, will greatly be improved in outlook. Such an object as this can never fall short of achievement through lack of sufficient funds.

The National Art Collection Fund

WE have cause to be grateful for the achievement of the National Art Collections Fund during its twenty-three years' existence. As Lord Oxford has said, there can hardly be imagined a more fruitful or enlightened form of disinterested service than what has been undertaken by this Art Collections Fund. We can hardly doubt that the Government will do its best to save our valuable national art treasures, and not leave a heavy or nearly impossible burden on private enterprise and enthusiasm. Prominent instances are given in the interesting report before us which show how admirably private donors have responded to the appeals of the National Art Collections Fund. In 1906 the Society raised £45,000 for the purchase of the Rokeby "Venus and Cupid," by Velasquez, and only three years later Holbein's "Duchess of Milan" was secured for £72,000, which was a very fine effort when we remember the Government grant for this was only £10,000. Other important purchases brought up the total value of the Society's efforts, from 1906 to 1924, to a sum of £153,500. A perusal of the report we have just received is fully convincing of the wide activities of the Society, and all those who read will, we feel sure, be ready to endorse the statement of a distinguished painter that "there is no more patriotic Society at work in Britain to-day, no Society doing more to make the present worth living in, or doing so much to enrich the future for those who find the world of Art their chief joy."

Architectural Criticism.

WE reproduce, without comment, a paragraph from the American *Western Architect* on the subject of criticism of architectural design:—"What is there about an architectural design that makes it sacrosanct? Why should it be set aside from the other fine arts and be above criticism? We all read one or several publications devoted to literary criticism, and perhaps those devoted to the criticism of music, painting, or sculpture. The daily papers reek with criticisms of the drama, the movies and sports, from prize fights to football, even to dog fights. Nobody sues anybody for opinions expressed. The direct result of such criticism is a better literature, better painting and sculpture, and a better quality of sporting events. But the architect can commit atrocities of the most terrible kind and nothing is said in protest. If intelligent architectural criticism was common, few owners would wish to have their buildings stigmatised as eyesores and they would, even without the ability to discriminate personally, employ those architects who receive favourable comments. What would be the result? Better architecture because of a demand for it, and more competent architects because of a demand for them. Criticism would be the greatest incentive possible for better designing."

The R.I.B.A. Essay Prize.

IT is to be regretted that once again, this prize has not been awarded, there being, in fact, only one competitor. There has never been a time when so many architects have turned their hands to writing, and it is of the greatest importance that good architectural writing should be encouraged among the coming generation. The continued failure of this prize to attract competitors indicates that there is something wrong with the conditions, and it would be interesting to ascertain from the principals of the various schools whether any modifications might attract a more adequate entry. We suggested some points of criticism in a leading article on March 13 last year—more especially that the dual purpose of writing a literary essay and at the same time making "a useful contribution towards knowledge" is probably the cause of the trouble. An essay, strictly speaking, should make a personal appeal and be discursive and pleasantly flowing rather than didactic. An informative piece of writing is not really an essay at all and it is too much to expect competitors to attempt to combine two different forms of writing in one work. It can, of course be done, but the problem set is too stiff.

The Road to Beauty.

A CONTEMPORARY suggests that, in view of the great historical value of the New Forest and of all the little known beauty it contains, there should be

Leeds University Reconstruction Scheme: Perspective View of Woodhouse-lane Front.

MESSRS. LANCHESTER, LUCAS & LODGE, FF. & A.R.I.B.A., Architects

Freehand Detail.

R.I.B.A. Testimonies of Study.

BY MR. EDWARD J. HARRISON.

rected a series of "what-to-see" sign-osts, lest motorists and other casual by-assers should fail to discover any hidden-way village or beauty-spot. We have very sympathy with the beauty-lover, e he motorist or no, but we feel that the ire of the countryside is of a nature hat demands quiet, and, to a great egree, solitude for due appreciation. overs of rural beauty require no guidance —they will find that beauty for them-elves.

Saving Bloomsbury.

IT is with relief we notice that the councils of London County, Westminster, and St. Pancras have whole-eartedly set themselves in opposition o any attempt to degrade and com-ercialise the Foundling Hospital estates y the introduction of any unsuitable ement. Their action is particularly elcome, because it is an index that goes o show that the public at large is taking, ot only an interest, but an intelligent terest in the preservation of England—r it is but a step from Bloomsbury to ie whole country. Should the Blooms-ıry squares go, may not the others ıickly follow suit, and what hope then n there be for rural England when ondon, its chief town, has set the lead the downward path? We trust and lieve that the Bill that is soon to go rough Parliament again will be de-sively defeated.

London Museums.

THERE is already so great an accumulation in museums that there is reason in the arguments opposing the rther extension of them. Does it not m a matter rather of rearrangement d distribution? As a correspondent ites: "It is impossible to believe that is necessary to preserve everything in ndon, and the museums in the pro-ıces, which are taxed to provide for collections which the provincial can hardly ever see, would be glad to receive many objects now housed in London which are of far greater local interest." We advance no plea for the reduction of museums. Economy of knowledge is not desirable, but the better diffusion of it is much to be desired. The larger suburbs of London are very lacking in resources of this kind, and we can think of one of more than 40,000 inhabitants which is almost wholly unprovided for in this respect, if we except the public library which includes a limited number of specimens. Weeding out of London museums, preserving what is most representative and important, would still yield ample scope for local requirements, and some such decentralisation seems to be required. The difficulty on account of cost of housing what is thus lent to localities might not prove insuperable if the public libraries were made of use to include them. In the suburb we have in mind, there is no opportunity for people to inspect such things.

The Collector's Methods.

WE may learn something from the private collector, who, in the course of buying his experience, is in the habit of weeding out and improving his possessions, knowing that they include examples which, though not without value and interest, overlap, or are better represented by later purchases. The sifting of these will mean the displacement of a good many examples. The London museums appear to require something of a like sifting, for their accumulations are so great that it would be only reasonable to distribute them in localities needing museum facilities, and the occasion for further expense in extending London museums as suggested would not then be required. It appears to us that public libraries in our suburbs might well include in their activities the housing of such collections, with the interest and pleasure they would extend. Sunday opening of such museum extensions would make it possible for fathers who are away all the week to take their children to see the works of man and nature in such exhibitions, and supply what is gravely lacking in so many suburbs.

Concrete Construction.

THE new factory building at Wembley, illustrated on January 7, is an outstanding example of what can be done with rapid-hardening cement in expediting building. This factory, with a floor area of about 90,000 superficial feet on four stories, was completed within six months. At Tilbury, piles 60 ft. long are being slung into position by crane and driven six days after casting. Cornhill and several other important London thoroughfares have been reconstructed and opened to traffic within a week or so of commencing operations. This speed of construction is naturally accompanied by a saving in form-work costs, as it is practically always possible to strip shuttering two or three days after pouring, instead of the usual two or three weeks, and re-use the material.

Cottages at Steyning, Sussex.

GENERAL NEWS

Professional Announcement.

After January 31 the offices of Mr. S. W. Cranfield, F.R.I.B.A., will be moved to No. 7, Bedford-square, W.C. Telephone No.: Museum 2420.

Institution of Public Lighting Engineers.

The new address of this Institution is General Buildings, Aldwych, London, W.C.2.

Architect's Estate.

Mr. George Simpson, F.R.I.B.A., of Milner-road, Jordanhill, Glasgow, (personal estate in Great Britain) left £8,634.

Surveyors' Institution.

A Rugby match between teams representing the Surveyors' Institution and the Auctioneers' and Estate Agents' Institute will be played on the Rosslyn Park Club Ground, Old Deer Park, Richmond, on Wednesday, February 16, at 2.30 p.m.

Vanishing Inn Signs.

Many interesting inn signs have disappeared recently, according to a return by the London County Council. Amongst those that have gone since 1924 are the "Shakespeare," in the Finsbury district; the "British Lion," the "Horn of Plenty," the "Maid and the Magpie," the "Sash and Cocoa Tree," and "The Flying Scud," from the Tower district.

Future of Clifford's Inn.

With reference to the sale of Clifford's Inn, the buyers, Messrs. Eyre & Spottiswoode, do not intend, so it is said, to make any alterations to the property for some time, and say the future of the Hall is not endangered. The firm's offices will eventually be built on much of the land now covered by the Inn. The firm is fully alive to the importance of preserving any buildings of historical and architectural importance.

Lloyd's Grandfather Clock.

The Corporation of Lloyd's have recently been given the opportunity of selecting for the new building in Leadenhall-street, a grandfather clock from the collection of more than 200 English long-case and bracket clocks belonging to Mr. D. A. F. Wetherfield. The chosen clock was made by Benjamin Gray, who was in business in Pall-mall from 1720 to 1760, and was clockmaker to King George II.

"The Preservation of St. Paul's."

Under this title a book, by S. A. Alexander, M.A., Canon and Treasurer of St. Paul's, is shortly to be published by John Murray at the price of 2s. 6d. It is the story of the preservation of St. Paul's Cathedral since the beginning of the work in 1913, and contains a number of popular addresses on subjects connected with St. Paul's, as well as the official reports on which the work has been based. The book is intended not only for architects and engineers, but for all who care for the great Cathedral or have contributed to its preservation.

Harrington House Facade.

Regarding the future of Harrington House, in Craigs'-court—one of the few remaining early eighteenth-century houses in Westminster—which has been acquired by the Government for the erection of a new automatic telephone exchange, Mr. Percival J. Ashton (founder of the Londoners' Circle), has made the following statement:—

"The present position is that the facade is safe, as the changes which are necessary to adapt the house for the Government's use will not be great owing to the large window space. The staircase offers a greater problem, and negotiations are still in progress between the Office of Works, the Post Office, and the Treasury. We have their promise that the staircase will not be destroyed, but the question is whether, and if so, where, it can be built into the new building."

Motor Park at Glastonbury.

The proposal to establish a motor park within the precincts of Glastonbury Abbey has reached a critical stage. A draft agreement under which part of the ground in front of the Abbot's Kitchen will be used for this purpose, has been conditionally approved by the administrative Trustees for the Abbey enclosure. If they are satisfied that Glastonbury as a whole is in favour of the proposal, it will be put forward for acceptance by the Diocesan Trustees, on whom rests the final responsibility for the sale of the land. The annual meeting of this body takes place on February 4. No alternative site has been offered to the local authority, but the council have offered for sale certain surplus land on their housing estate which many people think would, from both the traffic and the town-planning points of view, have made a good site for a motor park.

OBITUARY

Mr. Mark Judge.

The death took place on Tuesday, at Wittersham, in his 80th year, of Mr. Mark Hayler Judge, A.R.I.B.A., the well-known architect and founder of the Sunday Society. Mr. Judge was an authority on hygiene in relation to the arrangements of dwelling houses, and wrote a number of books on the subject. Among the offices he held at various times were those of Surveyor to the Sanitary Assurance Association, Chairman of the Metropolitan Board of Works' Inquiry Committee, Curator of the Parkes Museum of Hygiene, secretary of the International Medical and Sanitary Exhibition, Kensington, and Chairman of the Committee on War Damage. He founded the University Extension Guild and the British Constitution Association, and was honorary secretary of the Further Strand Improvement Committee. For many years he was senior partner in the firm of Mark H. Judge & Son, but retired some six years ago.

Fred Rowntree.

WE have received the following notes on the career of the late Mr. Fred Rowntree from a correspondent:—

Fred Rowntree, who died on January 7, was born in Scarborough in 1860. He was a member of the Society of Friends, and was educated at Bootham School, York. He was articled to A. Bury, in Scarborough, in 1876, and was for some years assistant to Mr. Burgess, in Leicester. He was for a short time in practice in Scarborough, and in 1890 he went into partnership with Malcolm Stark, in Glasgow. For the last 28 years he had practised in London, and since 1912 he had worked in partnership with his two sons. In 1905 he was elected a Fellow of the R.I.B.A.

His work included domestic work throughout the country, and he designed a number of Meeting Houses for the Society of Friends, and also planned new buildings and adapted old at most of their schools. His work also covered the designing of several swimming baths and a certain amount of hospital work. In 1912 he was selected as architect to the West China Union University at Chengtu, Szech-uan (West China), and the building of his work there is still in progress. Illustrations of this work have from time to time appeared in *The Builder*.

During the war he gave a great deal of time to various schemes for relief and reconstruction work, and in conjunction with the Friends War Victims Relief Committee, he organised the building of various villages of huts in Holland for refugees there, and also organised workshops for Belgian refugees in England. He was on the original Village Centres Council for the treatment and re-education of disabled soldiers, near Andover, in Hampshire. He was interested in and carried through the design for the lay-out and a number of the houses at Jordans Village, near Beaconsfield.

In addition to his professional work as an architect, he was a pioneer in the founding of workshops at Hampshire House, Hammersmith, and also at Jordans. These were formed to promote good conditions of labour and high quality of craftsmanship. He was one of the three original founders of Hampshire House Social Club, Hammersmith, and was an active member of the Hampshire House Trust.

COMPETITION NEWS

Proposed New Offices, Trowbridge, Wiltshire.

The Wiltshire Working Men's Conservative Benefit Society invite architects to submit designs in competition for new offices at Trowbridge. Messrs. Cyril A. Farey, A.R.I.B.A., and Robert Lowry, F.R.I.B.A., are the assessors. Premiums amounting to £250 will be awarded. Conditions may be obtained by applying to the chief secretary, Mr. Henry H. Dyer, Stallard-street, Trowbridge, Wilts, with deposit of one guinea, which will be returned on receipt of a *bona fide* design, or if the conditions are returned two weeks before the closing date of the competition.

Lexden Council School Competition.

We have received the following notice from the Secretary of the R.I.B.A.:—

The Competitions Committee desire to call the attention of members to the fact that the conditions of the above competition are not in accordance with the Regulations of the R.I.B.A. The Competitions Committee are in negotiation with the promoters in the hope of securing an amendment. In the meantime members are advised to take no part in the competition.

Shakespeare Memorial Theatre Competition.

The honorary assessors and the assessor, appointed by the R.I.B.A. to obtain by competition a suitable design for the new Shakespeare Memorial Theatre at Stratford-upon-Avon, have forwarded to the secretary, the Memorial Theatre, Stratford-upon-Avon, a complete schedule of conditions and instructions to architects, which can be obtained from the secretary on deposit of one guinea.

Among the conditions and suggestions drawn up by the assessors for the guidance of competitors are the following:—

The competition will be in two sections, the first for sketch designs only, followed by a second or final competition limited to six designs to be selected by the assessors from among the preliminary competitors. Each of the selected competitors will be paid £100 by way of premium towards the cost of preparing a further more detailed design, the conditions for which will be forwarded to him in due course. The first sketch designs must be delivered to Stratford-upon-Avon not later than June 15. This competition is open to architects of the British Isles and America. The promoters desire a building simple, beautiful, convenient—a monument worthy of its purpose. These conditions have been laid down as a guide rather than a definite statement of requirements, and competitors will be at liberty to vary them within reasonable limits to suit any ideas on the subject of theatre planning which they wish to express.

It is realised by the assessors that great differences in ideals exist between the various schools of theatre planning, and their aim is to allow all competitors in the preliminary competition as free a hand as possible. The old theatre building was completely destroyed, only the outer walls remaining. These may be incorporated into the new scheme or not at the discretion of competitors, who may treat them externally as desired. The style of the theatre may be any style which will harmonise with the spirit of the building and the architecture of the town of Stratford.

The auditorium should be simple, and any decorations should direct the eye towards the stage, the essential feature being that each seat should have a clear view of the stage. A two-tier house is favoured rather than a three-tier house. Its capacity should be 1,000. A few boxes are desirable, including a Royal box with ante-room. Seats should not be less than 33 in. by 20 in. Gangways are to be at least 3 ft. 6 in. wide, and there should not be more than 13 seats between gangways. Ample gangways behind rear of seats are essential. The stage must be adequate for handling any production with ease and rapidity. While a wide proscenium is not desirable, a wide stage is, and should be 50 ft. in depth, with as much width as possible.

[As there is no change in the list of competitions open, the Table this week is withheld.]

Top—Cottage at Wilford, Notts (now demolished).——Cottages at Worsley, Lancs.

SOME EXAMPLES OF ENGLISH RURAL ARCHITECTURE.

AMERICAN APARTMENT HOUSES—III

By F. E. BENNETT, A.R.I.B.A.

FIG. 12.—TYPICAL PLAN—2 FLATS—12 AND 13 ROOMS.—Corner site, 125 ft. by 100 ft.; 14 stories; 400, Park-avenue.

With the planning of two flats instead of one, certain new features occur. The tendency is for more of the site to be given over to courts, as it follows that the more flats to a floor there are the greater the outer wall space required. In this plan the two flats are very similar in their disposition. The area of the building is roughly divided into two halves, both sharing the service lift and the stairway. Each flat has a separate passenger lift, a small hall and a living-room placed end on to the outer wall, instead of being sideways on as in the former examples. The way in which service is arranged from the kitchen direct through the pantry into the dining-room and again from the kitchen through the servants' hall and up to the servants' rooms, is excellent and a very economical piece of planning. Each flat is distinctly divided into its three portions, viz., living, sleeping and service, each still quite distinct and separate. The number of "master's" bathrooms is one less than the number of bedrooms—the usual allowance for all sizes of flats—but again there is hardly a sufficient number of cupboards. One per room is not enough, except in very small rooms, because when a room is occupied by two people each occupant wants one to himself.

FIG. 13.—TYPICAL PLAN—2 FLATS—12 AND 10 ROOMS.—Corner site, 100 ft. by 90 ft.; 14 stories; Messrs. Cross & Cross, architects.

This is similar to the last, but on a smaller site. There are 22 rooms instead of 25. The whole area is again more or less divided in half, and there are two passenger lifts and one service lift, the latter directly connected with the stairway. By shortening the central rear court the service has been more closely concentrated at the centre, with L-shaped pantries, which again have no natural light. By this arrangement a considerable dark area is used up. The smaller flat is very good for its absence of long corridors, but to be criticised for having the dining-room and living-room so nearly the same size. While there are fireplaces to the three living-rooms and also the hall—an unusually liberal number for New York—there is only one bedroom with a fireplace. If the libraries are used as bedrooms, then there are two more bedroom fireplaces. That makes nine in addition to the central heating. In the larger flat a separate compartment is provided just by the hall for a telephone. Here again the rooms are placed end on to the outer walls. This is invariably necessary except in the largest and most expensive flats.

The windows on the front elevation are symmetrical and placed centrally in the four living-rooms looking on to Park-avenue. Owing to the half division of the flats, however, a central solid occurs. Two iron fire-escape stairways lead from bedrooms at the back, one for each flat. These are necessary to meet the requirements of the law demanding two stairways to be available from each flat.

FIG. 14.—TYPICAL PLAN—3 FLATS—10, 9 AND 7 ROOMS. Corner site, 115 ft. by 100 ft.; 15 stories; 399, Park-avenue. Messrs. Schwartz & Gross, architects.

This is a good example of the type with three flats to a floor, designed by a firm of architects who have had much experience with flat buildings; is the same type of plan as regards the general shape, but there are three flats instead of two. There are two passenger lifts and one service lift, one of the former supplying two flats, and the service lift supplying each of the three kitchens. A symmetry in the living rooms of the corner apartment is obtained, although the general arrangement of the rooms is somewhat strung out, giving a poor service portion, two servants being placed together in one room, attached to which is a bathroom and toilet. It is found very difficult to get two servants to sleep in one bedroom. As in the previous plan there is one central stairway, but

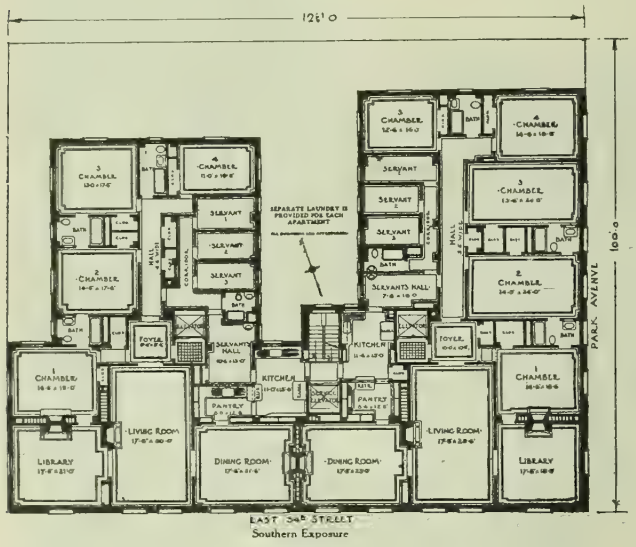

FIG. 12.

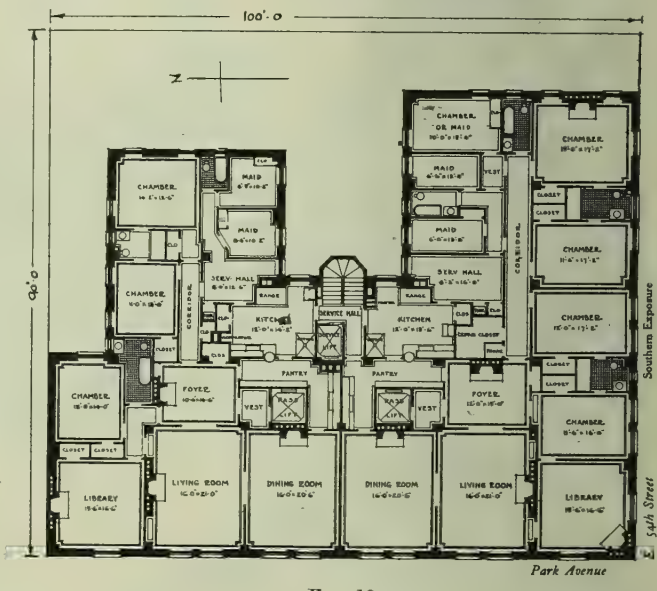

FIG. 13.

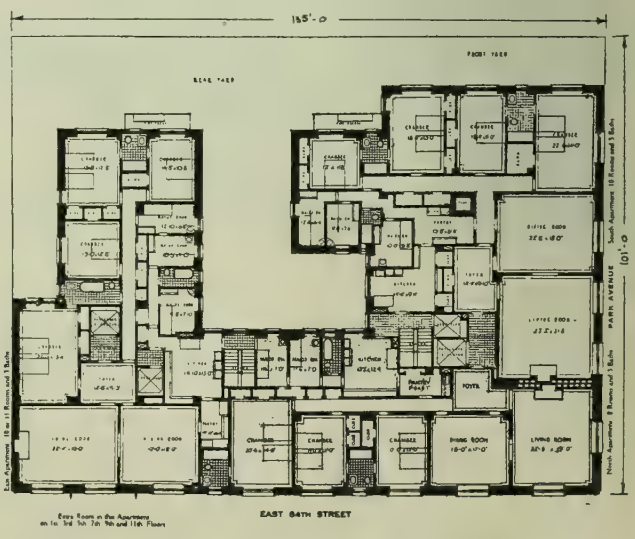

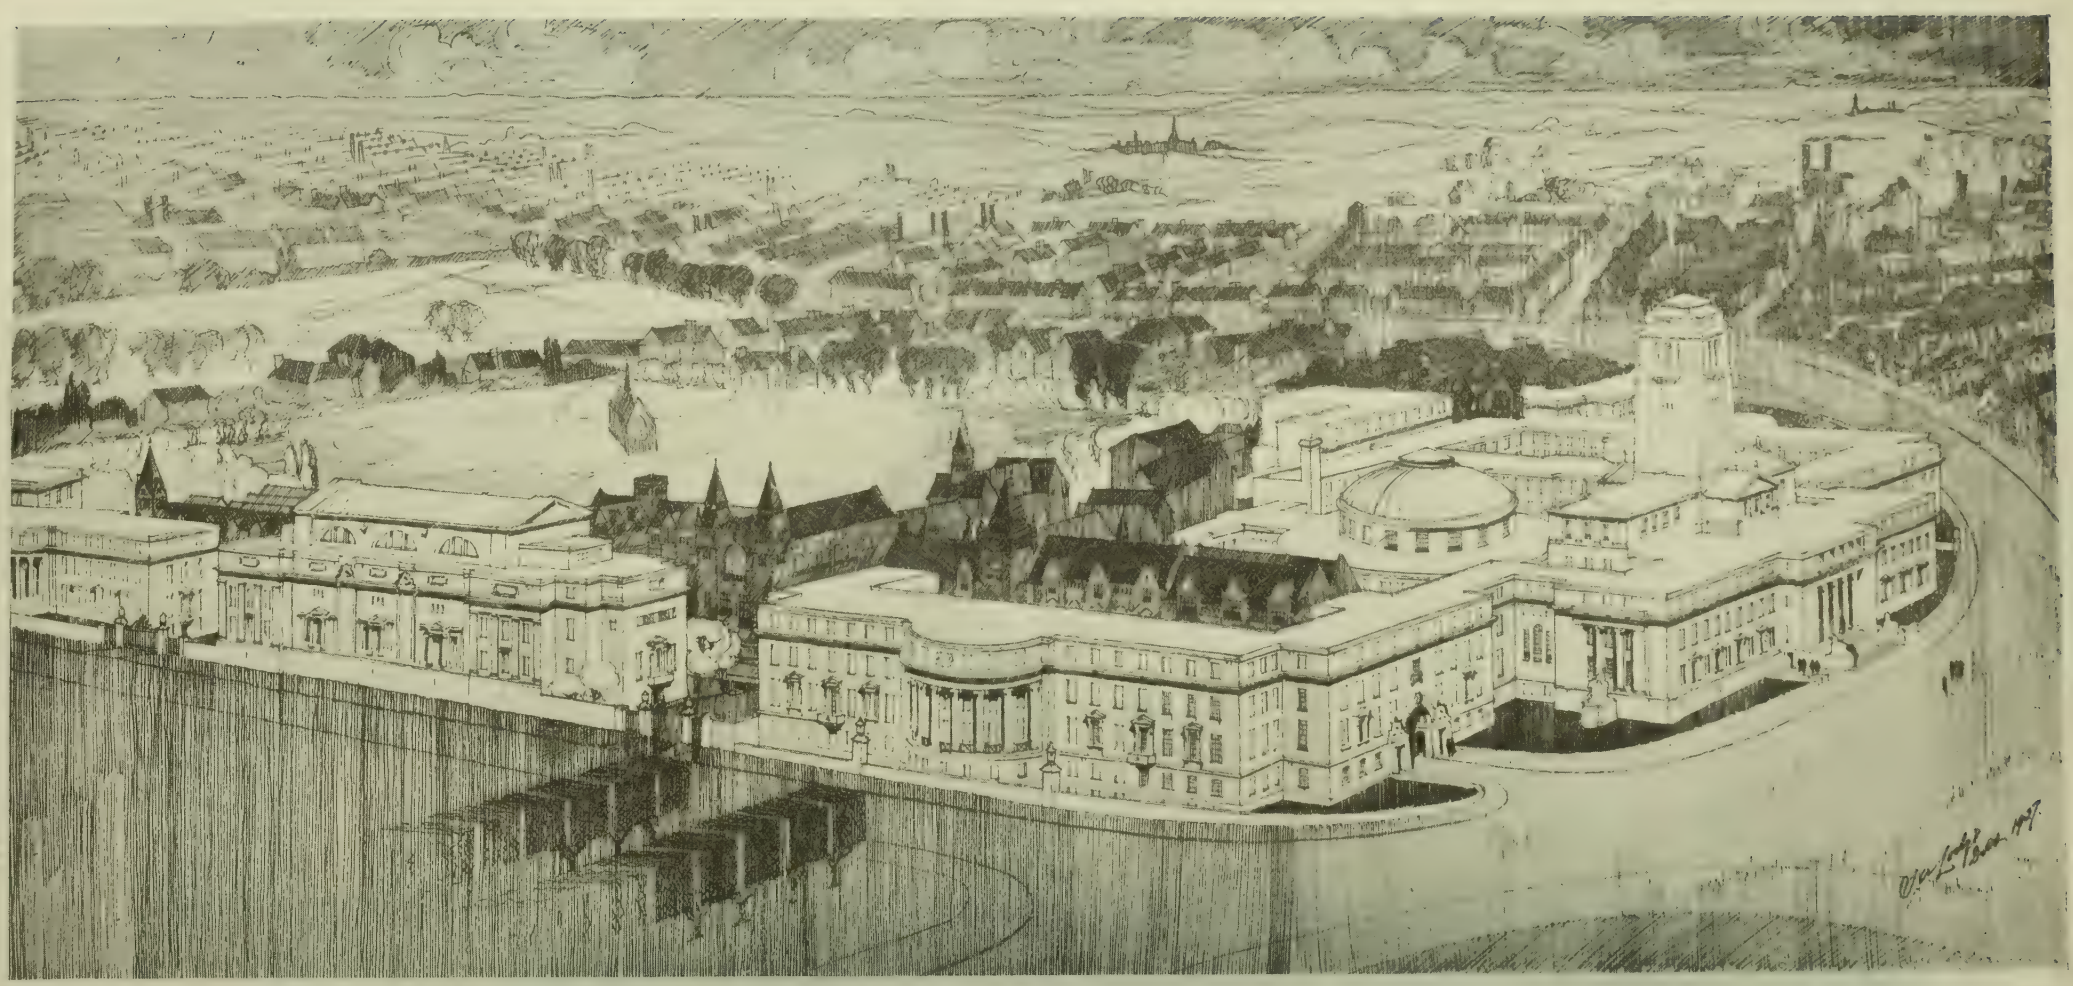

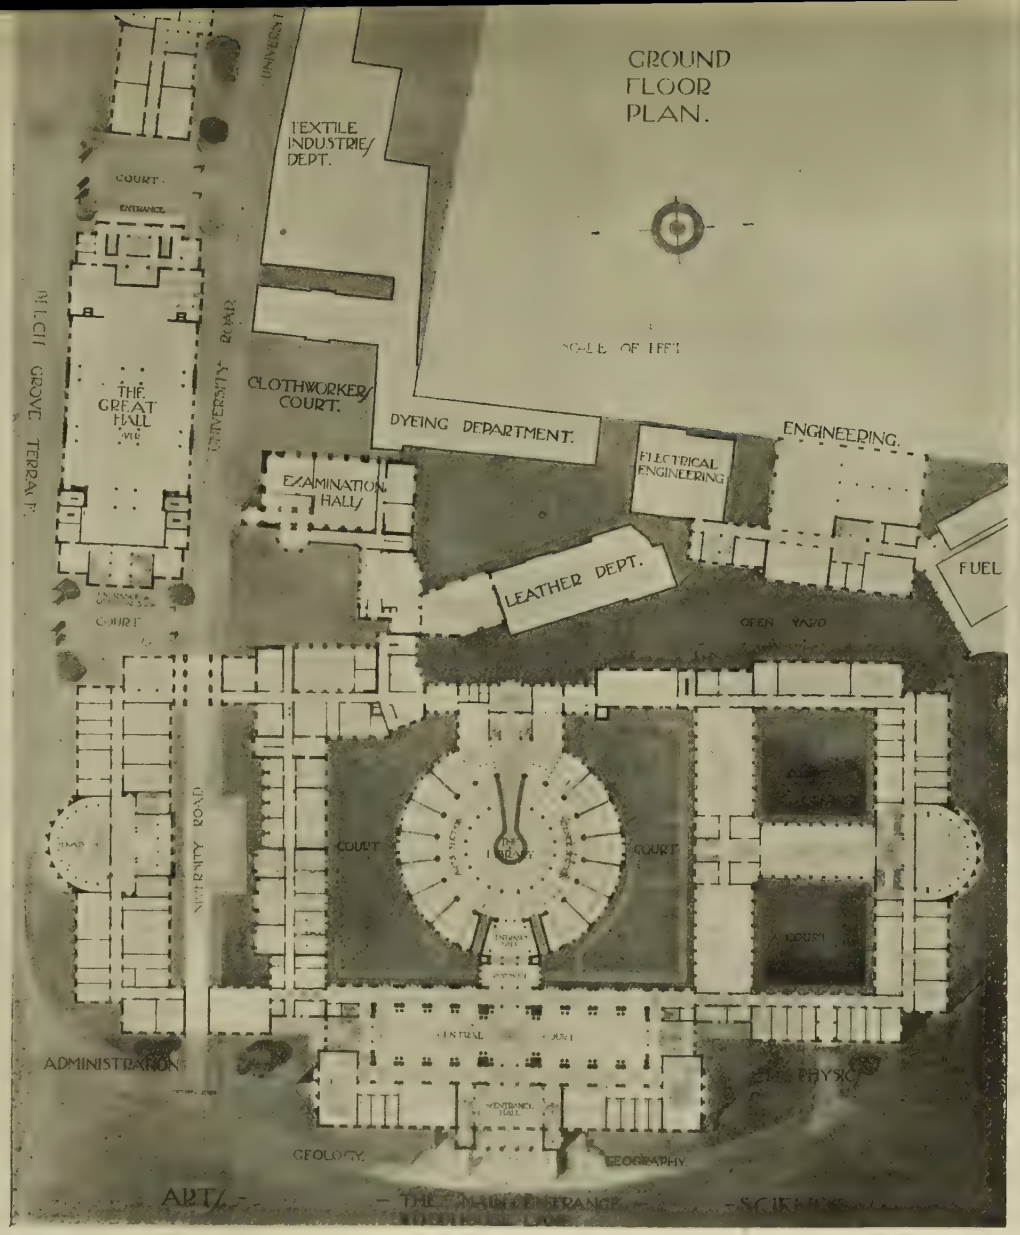

FIG. 15.

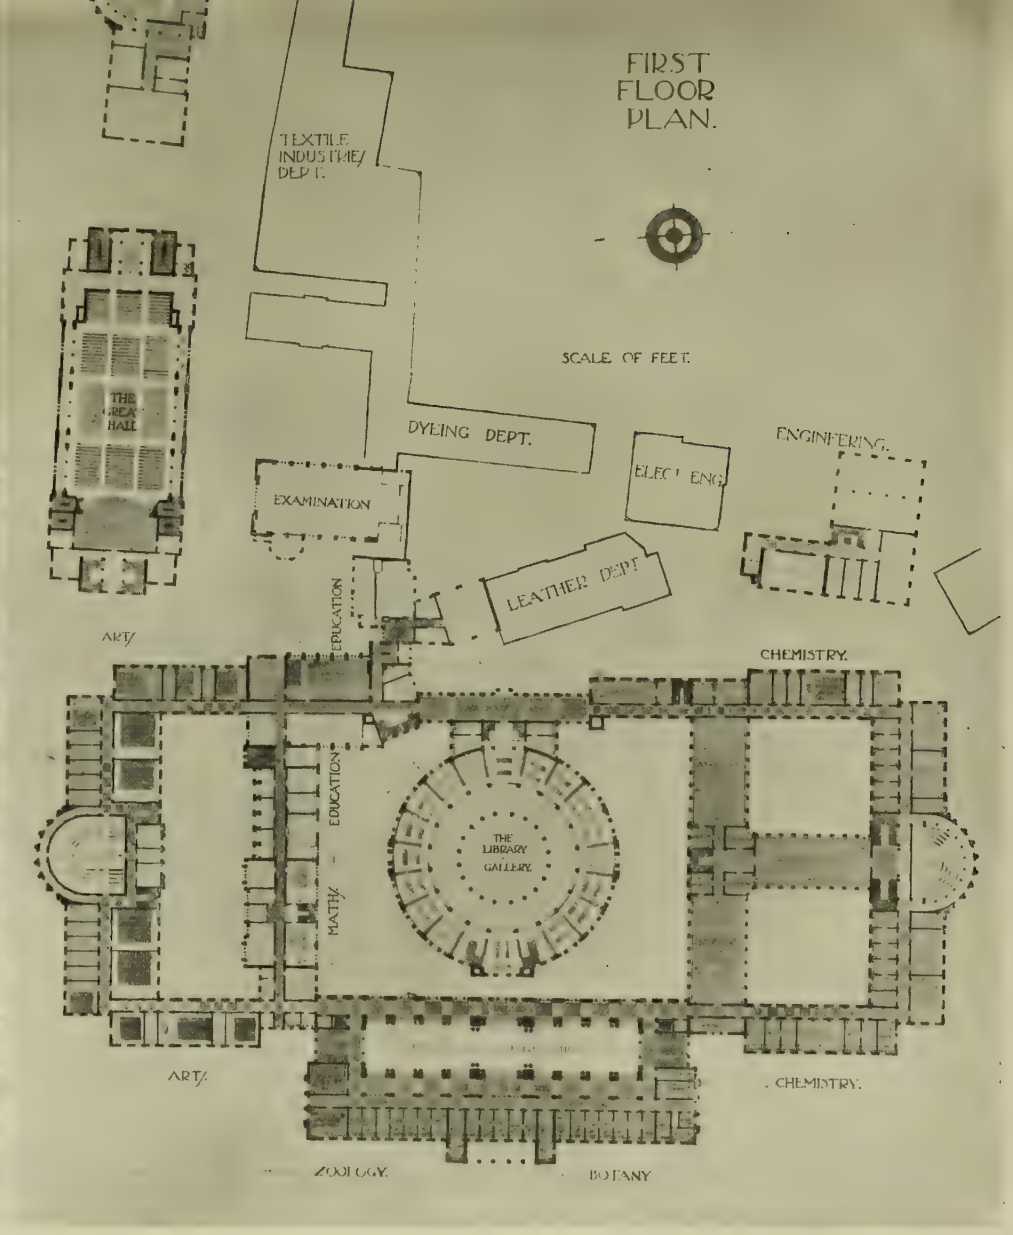

Plans of American Apartment Houses.

·THE UNIVERSITY OF LEEDS·
SCHEME OF RECONSTRUCTION

·THE UNIVERSITY OF LEEDS·
SCHEME OF RECONSTRUCTION

Leeds University Reconstruction Scheme: Winning Design.

MESSRS. LANCHESTER, LUCAS & LODGE, FF. & A.R.I.B.A., Architects.

an additional one is now introduced at the side of one of the passenger lifts. It is the type known as a fire tower, having no daylight and being constructed almost entirely of steel. The largest flat faces on to a court to obtain a better aspect than the one on the avenue or street, for in the corner flat all the living rooms face north. The value of doing this depends on the actual surroundings; if only small buildings adjoin, it is usually desirable.

FIG. 15.—TYPICAL PLAN—3 FLATS—11, 10 AND 8 ROOMS. Corner site, 100 ft. by 135 ft.; 14 stories; 993, Park-avenue.

This is a plan similar to No. 12, but introducing changes owing to an extra 20 ft. in the length of the site. There is an additional service lift.

FIG. 16.—TYPICAL PLAN—1 FLAT—17 ROOMS.—Corner site 100 ft. by 100 ft.; 14 stories; 77 per cent. occupied ground area. Architect: Mr. J. E. R. Carpenter.

This is another plan of the finest type, better planned than the others, but much inferior for its aspect. A new feature is the combined dressing-room and bathroom.

R.I.B.A. Annual Exhibition.

With regard to the Exhibition of Modern British Architecture, to be held at the R.I.B.A., 9, Conduit-street, London, W. 1, from April 27 to June 3, the Institute has issued the following notice to exhibitors: (1) All works intended for the Annual Exhibition of the Royal Institute of British Architects must be sent in on one of the following days: Works from London exhibitors, Monday, March 21; works from exhibitors outside London, Tuesday, March 22; hours for the reception of work, 10 a.m. to 5 p.m.; no work will under any circumstances be received before or after these specified dates. (2) All architects in Great Britain and Ireland are invited to send in not more than *two* works each; all works sent in for exhibition are submitted to the judgment of the Selection and Hanging Committee, whose decision is final. The exhibition is designed to interest the general public, and will therefore consist of photographs, perspectives, elevational drawings, sketches, and models. It is desirable that small key plans should, where possible, be fixed inside the glazing of the exhibit. Working and detailed drawings will not be accepted.

Further particulars may be obtained from the Secretary, R.I.B.A., 9, Conduit-street, W.

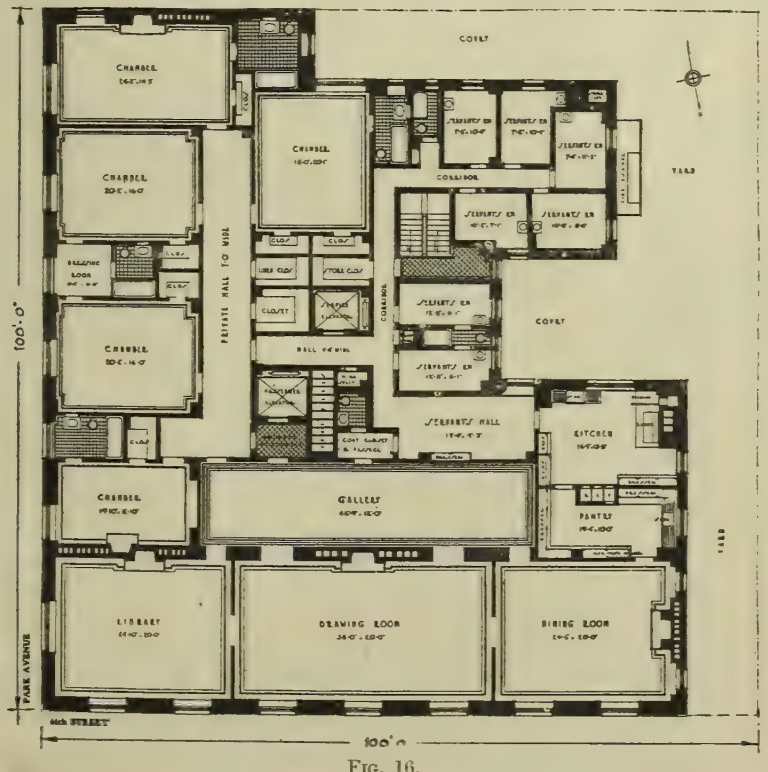

FIG. 16.

Plan of an American Apartment House.

SOCIETIES AND INSTITUTIONS

SHEFFIELD, SOUTH YORKSHIRE AND DISTRICT SOCIETY OF ARCHITECTS AND SURVEYORS.

Acoustics and Modern Buildings.

At a meeting of this Society held on Friday, January 14 (Mr. F. E. Pearce Edwards, F.R.I.B.A., in the chair), Mr. Hope Bagenal, D.C.M., A.R.I.B.A., gave a lecture on the "Acoustical Planning of Modern Buildings." In the course of his address he said that modern buildings requiring acoustical design fell roughly into two classes:—

(1) Those in which requirements were primarily for good music in which reverberation had to be a certain length;

(2) Buildings in which requirements were primarily for the speaking voice, in which reverberation must be cut down to the minimum.

In the first class were the large concert rooms, rooms for chamber music, and opera houses. In the second class were Parliament houses, council chambers, board rooms, Law Courts and Christian Science churches. To these must be added a third class, the requirements of which were multiple, namely, assembly halls, school halls, classrooms, auction rooms, banks. The defining of acoustic requirements was most important for an understanding of the subject.

In class 1, designing for good musical tone, as in the case of concert rooms where fine choirs and orchestras were to find a home, meant a reverberation of between two and three seconds and the providing of a due proportion of resonant panelling in the right position. It was wrong to cut down cube and increase the number of seats without introducing resonating surfaces to compensate. Small concert rooms for chamber music required adjustable absorbents and a proper amount of wood to give good tone. In opera houses the problem was to place a large orchestra in such a way that it would not intervene acoustically between singers on the stage and listeners in the stalls and dress circle. The best seats from a musical point of view in existing horse-shoe opera houses were nearly always those at the top of the house. This was wrong; the Wagner Theatre was the best model.

Buildings falling into class 2 were the antithesis of class 1. The speaking voice to be heard distinctly required a short reverberation, as in the open air. A large council chamber might have the volume of a small theatre, but the number of persons present might be only 40 or 50. This meant that a great deal of permanent absorbing material must be introduced, and the placing of this absorbent must condition the design. Added to this was the condition that a speaker must be heard from any seat upon the floor, and must frequently have a number of his audience behind his back, and therefore should have a flat ceiling as a useful reflecting surface Law Courts were the most frequently neglected buildings from an acoustic point of view. The irritation caused in them all over England was considerable and quite unnecessary. A flat ceiling with marginal splays, acoustic plaster on the walls above panel height and cork flooring were elements in the proper treatment.

In a third class we were confronted with requirements sometimes conflicting. A large assembly hall had to be used, for instance, for political meetings in which the speaking voice was the major requirement, and also for choral music, in which a certain length of reverberation was desirable for good musical tone. This was also the case in the halls of public schools and in music pavilions, kursaals, &c. A compromise was necessary; reverberation must be cut down, but tone must be brightened by resonant surfaces, and loudness must be insured by proper reflecting surfaces.

In the case of auditories having a platform the fan-shape had emerged as undoubtedly the most efficient plan. In all cases the object of the designers should be to direct the sound by the shortest path from the neighbourhood of the speaker to the neighbourhood of the audience.

A vote of thanks to Mr. Bagenal was proposed by Mr. W. J. Hale, F.R.I.B.A., and seconded by Mr. J. Amory Teather, L.R.I.B.A.

R.I.B.A. INTERMEDIATE EXAMINATION.

Testimonies of Study.

The following notes have been provided by Mr. L. H. Bucknell, one of the Testimonies of Study examiners.

The drawings reproduced represent a reasonable standard of the work presented, as Testimonies of Study, for admission to the R.I.B.A. Intermediate Examination. At a recent examination of such Testimonies there were many examples of designs for vast country mansions and other buildings of similar dimensions, obviously beyond the abilities of their authors. This is not meant to convey, on the part of the examiners, a desire for small cottages only, but for studies of subjects which students at this stage can reasonably be expected to do. Such criticism does not apply to the design illustrated, which apparently is a lodge.

As working drawings there are several inaccuracies and unfinished details in this design, of which the following appear to be the most glaring:—7 in. by 3 in. joists are used for the ground floor where sleeper walls could be used; fender walls are used to the fireplaces, but the flooring joists "trimmed"; the bedroom fireplaces are unnecessarily large (3 ft. 6 in. wide); a fireplace is not shown in the living-room though the chimney is shown there; honeycomb sleeper walls are shown below the level of the dry filling; the slates are tilted so much at the eaves that there would be a risk of water being blown back under the slates; the whole of the ⅛ in. scale plans, elevations and sections are insufficiently dimensioned. The site plan is not explanatory, the pergolas being shown on the line of the boundary, though presumably this would not be the limit of the site; linings are shown on ½ in. plans, but architraves are omitted; the foundations for 4½ in. walls are inadequate; surface concrete is omitted; the window board is slightly sunk for its whole width and no bearers are shown.

The measured drawings are well done, but the freehand sheet (see Notes, page 148) is very poor, the mixture of hard pencil outline with soft pencil shading being very unsatisfactory. The Orders sheets are well and sympathetically drawn.

PRESERVATION OF ANCIENT COTTAGES

FUND INAUGURATED BY PREMIER.

THE Prime Minister presided on Wednesday afternoon over a conference (held under the auspices of the Royal Society of Arts) of societies interested in the preservation of ancient cottages. Some forty bodies were represented, including the Ancient Monuments Society, Auctioneers' and Estate Agents' Institute, Carpenters' Company, Commons and Footpaths Preservation Society, County Councils Association, Council for the Preservation of Rural England, Garden Cities and Town Planning Association, Institution of Municipal and County Engineers, National Gallery, National Housing and Town Planning Council, National Trust, Royal Academy of Arts, Royal Archæological Institute, Royal Institute of British Architects, Scapa Society, Society for the Protection of Ancient Buildings, Society of Antiquaries, Surveyors' Institution, Town Planning Institute, and Victoria and Albert Museum. Several Government Departments were also represented, and many Members of Parliament, distinguished architects, and others were present.

In opening the proceedings, the Prime Minister moved the following resolution:—

> "That this meeting, called to consider the best means of preserving the ancient cottage architecture of this country, declares its warm support of the movement started by the Royal Society of Arts, and signifies its intention to assist in the establishment of a substantial fund for application on the broadest national lines in furtherance of this movement."

He would, he said, preface his remarks by saying that he did not consider it within his competence to tell the Royal Society of Arts what they should do or describe what it was proposed to do. Rather he wanted to enlist their sympathies with the terms of the resolution, and to assure the Society that whatever steps it might think wise to take to give effect to the resolution had the cordial support of all those present. It was difficult to exaggerate the importance of architecture in the national life. It was perfectly possible for a man to avoid ever looking at a newspaper or seeing a film; it was perfectly possible to avoid ever listening to a jazz band; but wherever one went or whatever one did, one was obliged to look at buildings, and buildings were obliged to look at the people who passed. It always seemed to him, and to all who had been brought up amongst some of the most beautiful of the old cottages in England, that this architecture was one of the tributaries of the main stream of mediæval craftsmanship that had come down to our times, and was of inestimable value to us. It had an appearance of spontaneous and natural growth wholly lacking in the abortions of red brick and slate that had arisen with such alacrity over the face of the country since the industrial era began. It was an education in itself to see the adaptation of local means, the meeting of local needs, and the work of local craftsmen in a village in the Cotswolds or amongst the Sussex Downs. And while they all realised that good housing was, and should be, a great civilising power, they had to confess that they and their immediate ancestors had neglected their duty from that point of view, and from every other point of view—and neglect had always to be paid for at a great price, as the neglect of the past two or three generations was being paid for to-day after it had led the country directly to disaster. Willaim Morris once said it was his function to stain wall-paper with poetry; no one could say we had stained buildings with poetry during the past two or three generations. We had stained them with prose, and pretty bad prose at that—the kind of prose one read on the descriptive paragraphs that appeared between the acts of second-rate American films. They had to see if they could not once again tap those springs of craftsmanship that had not flowed in this country for so long. The problem was not a hopeless one, because the craftsmanship still existed, and he was quite certain that if the right magician's wand were used it would spring again throughout the length and breadth of England. It was particularly incumbent upon them to insist that the old tradition should carry on until a new tradition, possibly linked up with the old, was ready to take charge of these things in England, just as it was so essential at the present day that all who could, should carry on until this generation had grown up to repair the irreparable wastage of the great war. There were some encouraging signs abroad. He often thought of the little towns by the river-side or sea-shore that had known the hands of the fanatical builder and the jerry-builder in recent years, and had been spoiled thereby. Yet there was a public opinion arising. There was an increasing sensitiveness in public opinion, and if it were a fact that the majority of people were not sensitive he had great comfort in the thought that people were beginning to realise that it did not pay to make a place ugly. That would hit many consciences that would never be hit æsthetically. They had recently had an indication of that consciousness in the development of the schemes for the prevention of the Kent coalfields becoming like some of the other coalfields. As he understood it, the problem before them was the preservation of old houses and cottages, not as curiosities, but as homes. They wanted to see those old buildings made adequate for people to live in. They believed it could be done. They wanted to take the *via media* between the type of brutal despoiler who was never happy unless he was in a vulgar villa and the fanatic who was a fanatical restorer and who based his faith on a spurious antiquity. They wanted neither of those methods. They wanted the middle course, and to enlist in their support an enlightened public opinion, without which progress was impossible. To those to whom the old rural architecture meant so much, and in whose lives it had played so great a part, it was a source of great comfort to know that a body such as the Royal Society of Arts had taken the subject seriously into consideration. For more than a century and a half it had been in the vanguard of enlightened progress in all matters concerning the arts, and he felt confident that, strengthened by a unanimous passing of the resolution he had moved, they might leave the matter they had at heart in the hands of the Society with the fullest confidence.

THE EARL OF CRAWFORD AND BALCARRES said he had been charged by the Society of Antiquaries to express on behalf of antiquarians and archæologists generally their cordial support of the movement. They thought something of that character was urgently needed. For many years past the State had voted money for the preservation of ancient monuments, but the Ancient Monuments Act had its limitations, and precluded the Office of Works from dealing with the kind of historical monument they had in view. No building that was used as a residence came within the purview of the Act. The country cottage, therefore, except when abandoned or derelict, could not be eligible for support out of public funds. Something further was therefore clearly desirable for preserving the national heritage of our cottages if they were not to vanish from our midst. One could not expect local authorities of a rural character, which generally had only small funds available, to spend money from the rates upon the antiquarian side of housing. It was true that during the last Session of Parliament, through the good offices of the Ministry of Health, an extremely valuable Act was passed into law which, loyally applied by local authorities, would go a long way in the direction they desired. But it was not enough. The local authority, as such, had only in the rarest cases the knowledge and experience of the fine art and science of the repair or conservation of old buildings, an art which during the past twenty-five years in this country had attained a high standard of efficiency unequalled in the whole world. A body was required to supplement the goodwill of the local authorities, and that could be found in the scheme under consideration. In spite of legislation, and granting the greatest goodwill on the part of those who owned or were responsible for these historic buildings, they were in danger of disappearing. They were records not merely of architectural history, but of national importance. Even after the ravages of the past fifty years the number of cottages worthy of preservation was still considerable, some of them dating from Tudor times. But although there were still many left, the danger to those that remained was now greater than ever. The more that had been lost, the more precious were those that remained; the greater the errors on the part of our ancestors, the greater the responsibility of the people of to-day. The Council for the Preservation of Rural England was greatly in sympathy with the movement. The preservation of these cottages was the preservation of all that had been handed down to us that was noble and true, and the maintenance of the charm and intimacy of the English country landscape.

THE SPEAKER supported the resolution, and in the course of his remarks said he would rather be forbidden to enter a building such as Ann Hathaway's cottage because it was occupied and children were playing in the doorway than be allowed to go inside such a building converted into a museum. He also referred to the work of the National Council of Social Service in the country districts, and expressed the hope that the new body would avail itself of the great experience of that body in rural matters.

SIR ALFRED MOND also warmly supported the resolution, and mentioned that a sum of £30,000 or £40,000 would be needed for carrying out the objects in view.

THE SECRETARY then announced that so far a total of over £1,900 had been subscribed.

A vote of thanks to the Prime Minister was proposed by Sir Thomas Holland, and heartily accorded.

New Methods of Building.

Mr. J. M. Macfarlane, the president of the Institute of Builders in Manchester, referred to new methods of building with steel framework in a speech proposing the toast of the Institution of Structural Engineers at the dinner of the Lancashire and Cheshire branch. Builders, he said, had been sufferers at the hands of the structural engineers. They had accomplished with their structural steelwork something comparable to the application of power to the trade of the hand-loom weaver. They had given buildings a greater stability than they had once possessed; they had given buildings an increased stability while at the same time reducing the substance of the structure, and had thereby greatly increased the possibilities of light and ventilation as well as floor space. But the most remarkable accomplishment was to have increased the productivity of city land. They had made it possible to put up a ten-story building where before only three had grown, and one of fifteen where there had only been five. That was something the community was inclined to overlook. There were, he felt, further worlds to conquer if structural engineering was to perform all the tasks expected of it. They were still waiting for the production of some form of rustless steel. He would like also to suggest that they wanted a Portland cement that was waterproof. With those two mighty forces in their hands their future would be beyond imagination.

Newstead Priory.

It has come as a great surprise to many to learn that the historic priory at Newstead, the home of the Byrons, is to be let off in flats. Newstead was founded by Henry II in 1170 as a priory of Black Canons, and on the dissolution of the monasteries was granted to Sir John Byron, of Clayton. This began a long connection with the Byron family, which lasted without a break until 1817, when Lord Byron, the poet, sold the estate to Colonel Wildman for 90,000 guineas. Recently 757 acres have been sold to a buyer from Hucknall, and a few days ago the same person bought another 560 acres. A considerable portion of this land fringes the main Nottingham to Mansfield highway.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

S.R.A. and the New Bill.

SIR,—A recently retired grocer desired a new house; accordingly he discussed the matter with a local builder, and, finding his requirements could be met for about £1,500, he determined to proceed. He might, of course, have commissioned the President of the R.I.B.A. to design it, or he might have awaited the result of the *Daily Mail* Competition—but he didn't. He knew the size of his family and the hutch required, and provided it had a semi-circular window to enable his good lady to view the passers-by he was easily satisfied. After all, he was proceeding in exactly the same way as many financiers and stockbrokers do. The builder, however, informed him that plans were a necessity—to fit the requirements to the best advantage—to suit the site—to submit to the local authority—to exhibit to the vendors of the ground—and last, but not least, for the preparation of an estimate of the cost and the direction of the workpeople.

Although in trade our grocer would no doubt have wanted alternative quotations for a few pounds of sugar or soap, yet for the house he was prepared to let the builder have things his own way. As the builder did not retain a draughtsman, he suggested Mr. "X," an architect, should prepare the plan. So it was done. The proposed new Act does nothing whatever to alter or stop all or any proceedings similar to these. The grocer, the financier or the stockbroker may employ a builder direct to paint a front door or add a new wing. The contract between the building owner and the building erector is entirely a matter for themselves. They may obtain their plans or specifications as a basis of it how they will. Let it at once be admitted that it is greatly to their advantage to obtain a fully and carefully trained architect. Let us test the man and register him and have him on account of his ability. Five thousand "chartered architects" there are—trained, tested, accepted, registered—and our grocer did not go to one of them. A dozen could be found by their brass plates, near where he lived and near where he was about to build. Nor did the builder select one of them. The grocer went to the builder because they were old friends. They had for years dealt with each other and there was no need to go elsewhere. The grocer, who had lived in the Cotswold district, had no appreciation of the charm with which Mr. Dawber could invest a Cotswold house. The builder went to "X" for much the same sort of reason, added to which he knew that "X" wanted work.

The present writer can add what the builder did not know, viz., that "X" was well-trained and with considerable experience. He had started as pupil and assistant to a well-known architect, and before his own office closed (for want of funds to keep it going) he had been a competitor in the L.C.C. County Hall Competition. In student days he had joined the A.A., and was a prizeman in the old Class of Design and also at University College, and was a competitor for the Soane Medallion—his work for which was well spoken of in the R.I.B.A. *Journal*, and the elevation was accepted for exhibition at the Royal Academy. He had travelled in France and Italy, U.S.A. and Canada, and for practical experience had several times served as clerk of works. In connection with this true tale, let us look through the Draft Registration Bill.

Clause 3 makes it the absolute "duty of the [R.I.B.A.] Council to set up and maintain a Register . . . of Architects." There is no duty laid on anyone else to supply information; it is a mystery how information will be obtained. Will they include "X"? Officially they cannot be aware of his existence; they cannot be expected to examine their own records or those of the A.A., University College, the R.A. and the L.C.C.; and "X" is quite unlikely to take any step to get his name inserted, as no advantage results.

Clauses 7 and 8 make it clear that matters other than technical and artistic ability are essential to Registration. "Professional discipline and Control" (see Secretary, R.I.B.A. Registration Committee) may or may not be desirable in a voluntary organisation like the R.I.B.A., to which membership is obtainable only by election and which can terminate at any time. These things have nothing to do with the Registration of technical ability. Those who want (in polite language) "tommy rot" of this sort, or academic dress, or trade-union restrictions, can no doubt obtain admission to the Institute; but those who want to see some recognised diploma for training and ability want it without frills of this nature.

Clause 11 overlooks the fact that the word "architect" has more than one meaning. Primarily it expresses the relationship between the designer of the building and the actual structure; it is akin to "father" or "mother." It has come to mean a professional occupation going into many matters other than building design. Either way, it has nothing to do with the size or nature or quality of the building. Every child has a father. Every building has an "architect." "X" was undoubtedly the architect of the grocer's house, and it makes no difference whether he is registered or not. The building designer does not cease to be the architect because he is unregistered.

Clause 12 is simply an unwarrantable interference with the liberty of the subject. So long as the grocer is entitled to obtain his house design where he pleases, he is at perfect liberty to enter into a contract with the builder to erect it. Neither grocer nor builder is an architect or subject to the R.I.B.A. in any way whatever. If they agree to accept the decision of "X" as to when payment on account of the structure is due, it is their affair only. To suggest that any certificate granted by "X" under the contract terms is valid if he is registered, and invalid if he is not, is childish because it is unworkable. The R.I.B.A. has no right to examine the contract; the grocer will pay because otherwise the work will not proceed, and the builder will accept because it is the simplest way to obtain payment for work done.

* * * * * * *

Cannot someone deal with a much-needed reform in a simple and direct manner? I can conceive a body that, for distinction, might be called a "Guild of Architects," consisting of Members of recognised ability, carefully selected; there would also be a "Student" class, whose registration would commence with formal apprenticeship to a Member and leading up, much as now, to the "Final Examination." Those who satisfied the examiners would automatically become Associates for a while—perhaps five years—and then come up before a tribunal, not for examination so much as to exhibit proofs of what they have accomplished in any direction. If the tribunal was satisfied they would become "Members." Ability only is the keynote; any other frills may be left to the R.I.B.A. This is what many have been looking forward to for years past, and this is exactly what the new Bill will not accomplish.

HORACE R. APPELBEE.

January 21, 1927.

Limited Competitions.

SIR,—I notice that there is now being advertised an architectural competition which is closed to all but certain architects in practice. The number of assistants in the profession is very large, and as an assistant I deeply regret that such a line of action should have been adopted.

In holding this competition, the promoters are presumably seeking a design which will meet their requirements from both a utilitarian and an æsthetic point of view. With the modern training which he now obtains in the architectural schools, the present-day assistant is beyond doubt quite capable of producing and supervising such a scheme.

To most assistants, competitions afford the only opportunity of building up a private practice, and one cannot but deeply deplore the fact that such a restricting condition was deemed essential by the promoters, without at least stating a reason for such an attitude.

N. D.

A Re-housing Suggestion.

SIR,—I read Mr. Harold Falkner's suggestion, published in your issue for January 14, with interest, but I would point out that when nature builds mountains she slopes the sides so that the power of the sun has a chance of making itself felt on the northern slopes. Mr. Falkner's mountains have vertical sides, and if we consider the effect of his 250-ft. blocks in latitude 51 (London) we find that the shadow will be 870 ft. long at noon in midwinter and 315 ft. long during the equinoxes. In latitude 41 (New York) the shadows would be only 525 ft. and 215 ft. respectively; this is bad enough, but if we place the shadows appropriate to our latitude on Mr. Falkner's plan we find that for six months in the year, *even at midday*, the playgrounds will be in cavernous darkness and the sun will never enter for any period worth mentioning into the lower windows of ten out of fourteen more or less south-facing blocks. The great aim and object of doctors and of those seeking their own health and comfort is to make the most of the sun during the six winter months. It is a consideration of supreme importance. It seems to me, therefore, that the building shadows form an insuperable objection to the erection of groups of semi-skyscrapers in our latitudes.

MANNING ROBERTSON.

The Price of Portland Cement.

SIR,—The notice which has recently appeared in the Press regarding the Report of the Inter-Departmental Committee appointed to survey the prices of building materials is rather misleading, inasmuch as these notices have stated: "There has been a rise in the price of Portland cement. The rise in England, with slight variations, amounts to 10s. per ton, and in Scotland to 15s."

We would point out that the Report covers a period ending November 26, and the increase referred to relates to a temporary surcharge imposed by The Cement Makers of Great Britain on day to day orders which only operated from October 28 to December 15. This surcharge became absolutely necessary owing to the excessive cost of fuel caused by the coal strike.

Although the cement industry was greatly affected by the coal strike from the beginning, since it takes almost half-a-ton of coal to manufacture one ton of cement, this product was, perhaps, the last to be increased in price and the first to be reduced to normal.

For the British Portland Cement Association, Ltd.,
A. C. CRITCHLEY,
Vice-President.

Peterborough Cathedral.

The Peterborough Cathedral Restoration Committee has decided to proceed at once with the restoration of the south transept and the roof of the south-west tower of the cathedral, which the architect, Mr. Leslie Moore, regards as urgently needing attention. During the last six years, heavy repair work has been carried out for the support of the apse and the north wall of the choir, and the maintenance of the choir, north transept, and nave roofs. With its funds practically exhausted, the committee is now appealing to churchmen generally to support the efforts of the diocese to save the cathedral.

Leeds University Competition.

Dr. P. S. Worthington, F.S.A., F.R.I.B.A., the assessor in the limited competition for the lay-out of the site and for the erection of new and the adaptation of existing buildings for the University of Leeds, has made his awards as follows:—

First: Messrs. Lanchester, Lucas & Lodge.

Second: Messrs. John C. Procter and Joseph Addison, Associated Architects.

Third: Messrs. H. V. Ashley & Winton Newman.

In his report the assessor says he has given very careful consideration to each of the seven designs submitted, and continues as follows:—

"It was not to be hoped that any competitor would solve all the problems involved in the planning and the designing of an ideal modern university, but I am of opinion that the author of design No. 2 comes nearer to attaining the object of this competition than might have been expected, and certainly nearer than any of the other competitors. The latitude allowed by the instructions has naturally been variously interpreted, but this designer gives substantially what was asked for and avails himself wisely of that latitude. His conception of a modern university would be unrivalled in this country, and as a building should rank in the first class anywhere. While it must be recognised that there are evident faults in his detailed planning of certain blocks such as occur in all the other designs in one form or another, these faults are generally such as can be remedied without in any way spoiling the conception as a whole.

"The lay-out is incomparably the finest submitted. Most other schemes placed their entrance close to the agreed boundary line at the angle of University-road and Woodhouse-lane with more or less satisfactory result, but this method of approach has in no case resulted in such a fine lay-out as that produced by this author's entrance from a point very little removed from the angle, but facing Woodhouse-lane. Placed in such a way that the building will be seen in impressive and attractive perspective, and be dominated by a fine tower central with the axis of Woodhouse-lane, it will not only be seen from far down that street, but will dominate the neighbourhood and be seen from all directions and symbolise the University. On the site plan the boundary along Woodhouse-lane is altered from that agreed on with the Corporation, throwing a considerable area into a widened street. This may give added dignity to the buildings which are well set back within the agreed line, but is only a question of drawing and of indication of the boundary railing. This railing might equally well be on the agreed line and the space inside it paved or grassed.

"The author proposes to make University-road private, and to convert Beechgrove-terrace into a continuation of Hillary-place, joining University-road between the Textile and Agriculture Buildings. Nearly the whole site of the University is thus brought within a ring fence . . . so that anyone walking round the site will pass one long series of fine buildings giving the idea of a complete homogeneous and dignified University, the present buildings which are out of harmony being lost behind the continuous front. Coming to the general arrangement of the buildings themselves, the library forms in plan the centre of the whole conception, and is a fine domed structure admirably suited to its purpose and symbolic of the idea for which the University stands. Grouped round it and within easy reach are all the various schools with well-lighted and direct communicating corridors which link up every part of the buildings. The approach to the library is opposite the main entrance in Woodhouse-lane, and opens through a vestibule from the Students' Court which is in itself one of the great features of the scheme as a centre of University life and one of considerable importance in this climate. From it every department is readily accessible, and each department is self-contained and clearly defined. The administration building is, in my judgment, well placed, but is unfortunately detached and quite unnecessarily so, for it appears to me quite simple to link it up to the main entrance hall, and this, together with some slight rearrangement of rooms would, I consider, make it a suitable and workable department.

"The scheme depends on the removal of the diagonal arm of the existing Arts and Science building, a removal which is justified by permission given in the conditions. I consider that this fully justifies itself, as it certainly stands in the way of a dignified and convenient lay-out. The attempt to retain this block has been detrimental to several of the schemes. With regard to the treatment of University-road and Beechgrove-terrace, if I may venture to express an opinion, it appears to me that the realisation of this principle of bringing the precincts as far as possible into a ring fence is of great importance to the University. If University-road becomes private (the Corporation, of course, retaining access to services below the surface), I see it as becoming, together with the added open space between the buildings, a very fine series of quadrangular spaces, possibly tree-planted, which would serve not only for traffic between the buildings on either side, but an outdoor gathering place for students in fine weather which will be of great importance in a site necessarily rather crowded, and will leave what open space remains among the buildings freer for future extensions. This space, supplementing the great entrance hall, will add much to the University life and dignity to the whole lay-out. While the engineering scheme for services is not shown in detail, I see no reason why it should not work in principle under a modern system.

"The author deals clearly in his report with the proposed order of building and of temporary provision for carrying on the work of the University, and it will be a matter for discussion between the University and their architect as to what may be the most convenient method of procedure, as is laid down in the conditions and instructions. The buildings he proposes to erect first are the Physics and Chemistry block in order to replace the accommodation removed in the old buildings. Then the Library and the Mining department."

The panel of competitors in its final form consisted of Mr. W. Alban Jones, Leeds; Messrs. J. C. Procter and Joseph Addison, Leeds; Mr. Alan E. Munby, London; Mr. Michael Waterhouse, London; Messrs. H. V. Ashley & Winton Newman, London; Messrs. Lanchester, Lucas & Lodge, London; and Mr. Percy Thomas, Cardiff.

Palais de Danse, Leicester.

This building is now in course of erection in Humberstone Gate, Leicester. The spring floor for dancing is 95 ft. 6 in. by 51 ft. The walls will be finished externally in stucco with stone copings, &c.

The associated architects are Mr. Clement Stretton, F.R.I.B.A., and Mr. George Nott, F.R.I.B.A., of Leicester.

The general contractors are Messrs. Bowles & Son, and the following are some of the subcontractors:—Constructional steelwork, Lambourne & Co., Ltd.; steel windows, Crittall Manufacturing Co., Ltd.; spring floor, Francis Morton, Jun., & Co.; fibrous plasterwork, Johnson & Sons; ornamental ironwork, Birmingham Guild; ventilation, Young, Austen & Young; sanitary fittings, Morrison, Ingram & Co., Ltd.

CONSTRUCTIONAL STEELWORK SIMPLY EXPLAINED.—XVIII

BY OSCAR FABER, O.B.E., D.Sc., M.Inst.C.E., etc.

[EDITORIAL NOTE.—*This series, which will be published in book form later, is intended to present the problem in so simple a form as to be readily understood by those having no special engineering training.*]

THE rivets connecting the flanges to the web of a girder were discussed in the last issue. There is an interesting point in connection with this which is sometimes given wrongly in text-books, which may be stated as follows. It is frequently stated that if the flange consists partly of angles and partly of flange plates, as in Fig. 51 (*a*), then the rivets connecting the angles to the flange plates need not be designed for the whole shear in accordance with the calculations given in the last issue, but this shear may be reduced in proportion to the ratio of the flange plates to the total area of flange.

In most practical cases this is not true. It would be true in the case of a girder, illustrated in Fig. 51 (*b*), where the flange plates run through to the end of the girder without being stopped short. But as a rule, as has already been explained, the flange plates would be stopped off in accordance with Fig. 51 (*c*), the positions for

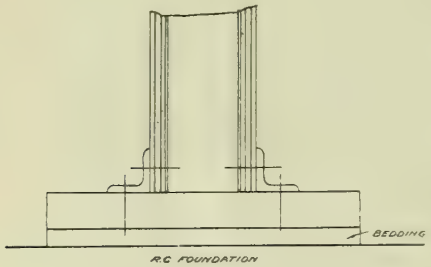

FIG. 53.—BLOOM BASE.

the ends of the plates being determined by the bending-moment diagram. In that case, plate No. 1 and the angle may be assumed as fully stressed at the section AA, where plate No. 2 begins, and will still be fully stressed at the section BB, where plate No. 3 begins. It therefore follows that the whole of the horizontal shear between AA and BB is taken up in plate No. 2, none of the increment being taken up in the angles which are equally stressed at AA and BB; therefore the rivets connecting the angles to the plates have to be capable of resisting the whole increment of flange force between AA and BB, and no deduction should be made for the fact that the angles form a part of the sectional area of the flange.

FOUNDATIONS.—The maximum load on a stanchion occurs, of course, at the bottom, and some care is to be exercised to see that this load is adequately transferred and spread over a suitable layer of soil. The load per square foot which various soils will carry is beyond the scope of these articles, but it may be stated as a guide that chalk and soft rock will carry about six tons per square foot, blue London clay about four tons per square foot, yellow London clay about two tons per square foot, and ballast two to four tons per square foot, depending on its compactness. Where the materials are soft, lower pressures have to be taken, and occasionally one has to found on soils where as little as half a ton per square foot is the limit of what can safely be imposed.

Having selected the suitable carrying capacity of the soil, the area of the foundation for a given stanchion load is easily determined, and the problem is then how to distribute the load over this area. One method of doing this is as shown in Fig. 52, where the stanchion is widened

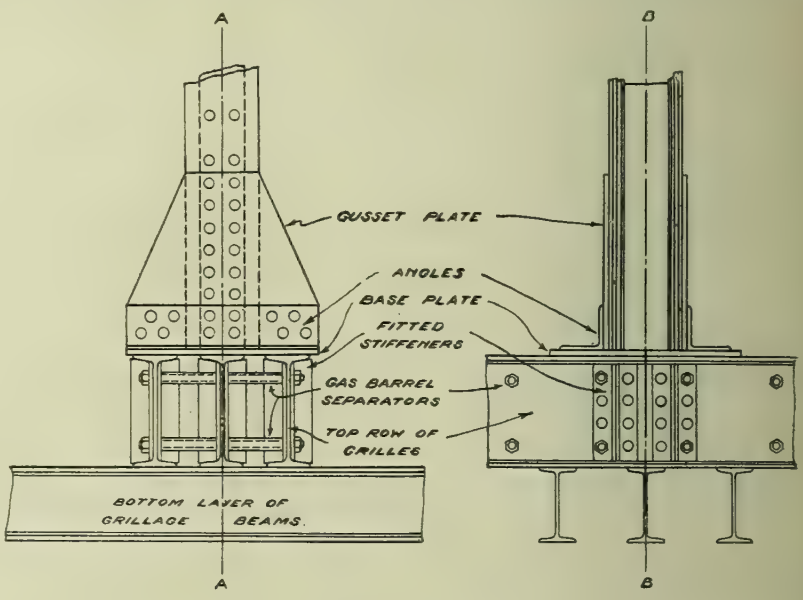

FIG. 52.—BASE AND GRILLAGE DETAIL.

out by means of gusset plates, angles, and base plate to be wide enough to carry the upper row of grillage joists with moderate-sized stanchions carrying about 300 tons. These are generally conveniently made three in number, but for smaller grillages fewer, and for larger grillages a greater number of girders may be required. Where three are provided the centre one may fairly be assumed to receive its load direct from the stanchion, but the two outer ones only receive load by a transmission through the gusset plates. It is therefore clear that the gusset plates in such case have to transmit two-thirds of the total load of the stanchion, and the rivets connecting the gusset plate to the stanchion must be strong enough to carry this load. This sometimes necessitates the gusset plates being 5 or 6 ft. long, which may be a great disadvantage, since if the increased width of stanchion is an objection, as it would be in an important building, it may necessitate lowering the foundations unnecessarily and increasing the cost.

This difficulty can be reduced by having at least four rows of rivets on each side between the stanchion and the gusset plates, and by using a larger diameter rivet than is the standard for the rest of the job. One-inch rivets are not uncommon in bases. The 1909 L.C.C. Steel-Framing Act requires, in clause 12c, that the gusset plates shall have sufficient rivets to transmit the whole of the load to the base plates, but this is an unreasonable hard-

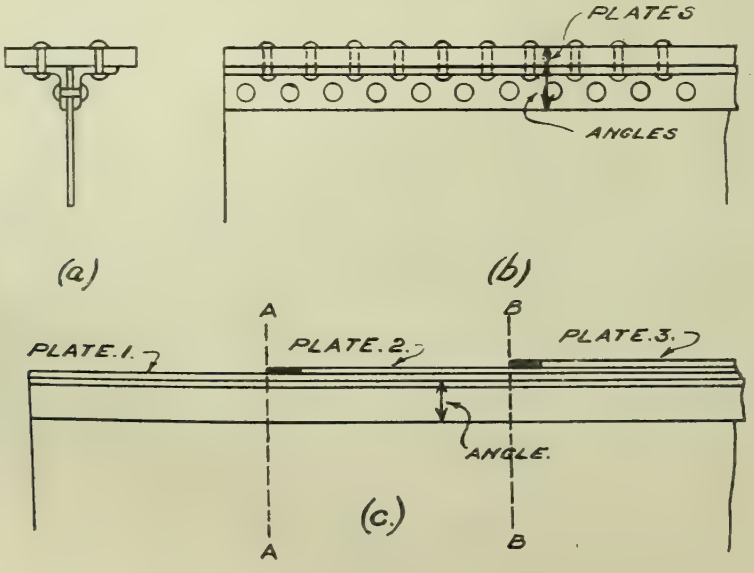

FIG. 51.

ship, since with reasonably good workmanship, the end of the stanchion making contact with the base plate, the load would certainly be transmitted direct to the centre grillage beam.

The grilles are preferably kept at the right distance apart by bolts and gas-barrel separators, and should be stiffened with fitted stiffeners immediately under the gusset plates so as to receive the load from them. These stiffeners generally consist of angles back to back, and must be fitted by forging or machining to make contact with the top and bottom flanges of the grilles. The whole of the base is filled with concrete solid, both as an additional stiffness and to protect the steel from corrosion, and to get this concrete in, the space between the grillage to beams should not be less than 2 in. to 3 in. The top grillage beams extend the full length of the base in one direction, the spreading in the other direction being provided for by the bottom layer of grillage beams.

The load at each intersection in the case of the bottom grillage beams is considerably less than with the top ones, and it is usually not necessary to provide stiffeners to them. The bottom grillage beams are generally four or five times as numerous as the other row and correspondingly smaller. They are evenly spaced and serve to transmit the load from the top row over the whole area of the base. The worst bending moment in the bottom grillage beams occurs on the centre line of section AA, and the worst moment in the upper grillage beams on centre line of section BB. A much more economical base is obtained by substituting reinforcing bars instead of the bottom layer of grillage beams, as the concrete is provided in either case and may just as well be called upon to assist in the work of distribution. As reinforcing rods are generally only about one-tenth of the weight of the bottom row of grillages, a further substantial saving in cost is thus effected. The same substitution is not quite so easily made in the case of the upper row of grilles when the loads are heavy, as the pressure per square foot on the concrete will be greater than is safe unless a great area of base is provided. In other words, the upper row of grillages serves to distribute the load over a sufficiently large area of concrete. This difficulty can, however, be overcome by providing a bloom base (Fig. 53) consisting of a solid slab of steel, which may be supported directly on a reinforced concrete base or raft, and obviates the necessity for gusset plates and all the objections. In very large stanchions of 600 tons or over, these bloom bases may be as much as 6 ft. square and 9 in. thick, but the saving in cost in the grillages and by keeping the foundations at a higher level will frequently outweigh this disadvantage.

Liverpool's Bluecoat Hospital.

The Committee which was recently formed under the chairmanship of the Lord Mayor of Liverpool, to save the Old Bluecoat Hospital, Liverpool, has now acquired the building and site, and handed it over to twelve trustees, who will hold it on behalf of a Society, to be called "The Bluecoat Society of Arts." To avoid confusion with the present Bluecoat Hospital, the building will in future be known as "Bluecoat Chambers." At present about £8,000 is required to complete the purchase price. It is an old fabric, and immediate reconditioning must also be faced.

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Responsibility for Faulty Design.

[REPLY TO "RESPONSIBILITY," JANUARY 14.]

SIR,—The architect, or consulting engineer, is liable for negligence and want of skill in designing and carrying out the work undertaken in the matter referred to in the question. Whether a person has exercised reasonable and proper care, skill, and judgment is one of fact, and is generally gauged by considering what other persons exercising the same profession or calling, and being men of experience and skill therein, would have done in the circumstances. An architect, or consulting engineer, in the circumstances described by "Responsibility," impliedly warrants that he is in skill reasonably competent to the task he undertakes.

Certainly the Court would take into consideration the suggested clause, when inserted, in the conditions of the architect's, or consulting engineer's, engagement; though it is doubtful if any architect or consulting engineer would bind himself to a contract were such a clause included. Nor is there any code, or custom, prevailing in this country as the one referred to, and no precedent either to support such a contract.

If, owing to the carelessness or incompetence of an architect, or consulting engineer, a person is killed, there is no doubt he would be held liable for such criminal negligence or incompetence; and if, through such negligence, or incompetence, his employer is called upon to pay damages, the latter would undoubtedly be able to support an action for the recovery of those damages from his architect or consulting engineer. (See Chapter XIII, Creswell on "Law Relating to Building Contracts.").

DESIGN.

Ownership of Party-Walls.

[REPLY TO "PARAPET," JANUARY 14.]

SIR,—"Parapet" does not state where the particular property is situated. In the Metropolitan area, under the London Building Act, 1894, special provision is made in respect to party-walls, and outside the Metropolitan area there may, or may not be, some local Act governing them. Under section 38 of the Law of Property Act, 1925, where under a disposition or other arrangement made after 1925, which, if a holding in undivided shares had been permissible, would have created a tenancy in common, a wall or other structure is or is expressed to be made a party-wall or structure, that structure shall be and remain severed vertically as between the respective owners.

At Common Law, if the circumstances in which the wall was built, and the amount of land contributed by the adjoining owners, is unknown, it is presumed that the adjoining owners are tenants in common of the wall. Also, if the adjoining owners are common users of the wall separating their properties, that is *prima facie* evidence that the wall, and the land on which it stands, are shared by them as tenants in common. Now, in general, a party-wall is that which is shared by the adjoining owners, and of which they are tenants in common; and it can be in part of its length and height a party-wall and the remainder an external wall.

On a consideration of the above, and the particulars furnished by "Parapet," the wall would appear to be a party-wall, so far as it formed a dividing wall between the existing building and the building which has been pulled down. As to this portion, B would have the "right of tie" into it, and a right to contribution from A towards the cost of underpinning it—since that was apparently in the nature of a repair. The contribution would not necessarily be a moiety of the cost, but a contribution based on the proportion of use made of the wall by each of the adjoining owners. No contribution would have been obtained if it had proved to be A's wall.

For the rights of a building owner under the London Building Act, 1894, see section 88, and in the matter of contributions, expenses, &c., see section 95 of the Act.

PARTY WALLS.

Dry Rot.

[REPLY TO "BUNGALOW," JANUARY 21.]

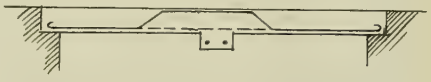
SIR,—The cure of dry rot calls for drastic treatment. It is caused by the spores of Merulius Lachrymans, which feed upon the timber under certain conditions. Those conditions are, briefly, darkness, a dark and stagnant atmosphere, and a certain degree of warmth. If the temperature is above 80 deg. the spores cannot thrive.

The remedy appears to be:—

(1) More ventilation.

(2) Punch nails in and remove sufficient floor-boards to secure access to all affected parts, remove all shavings and debris on surface concrete.

(3) Use a blow-lamp upon all visible decay, removing that unfit for further use, and treat the remainder of the woodwork with Calvert's No. 5 Carbolic diluted with water and used in accordance with the instructions.



(4) Do not cover the floor with lino.

(5) Make a periodical inspection.

H. V. M. E.

Reinforcement of Floor.

SIR,—I propose to reinforce a floor over two spans with ⅜ in. bars at 4 in. centres, and should be glad to know if it will be satisfactory to turn the bars up as shown in accompanying

sketch in order to get the same amount of steel at the top, over the supports, as there would be at the free end, or if it is necessary to carry some of the bars right across the two spans.

PRACTICAL.

Question of Building Line.

[REPLY TO "BUILDING LINE," JANUARY 21.]

SIR,—If "Building Line" refers to section 3 of the Public Health (Buildings in Streets) Act, 1888, the local authority concerned would appear to have a discretionary power, in that its written consent must first be obtained "to build any addition to any house or building beyond the front main wall of the house or building on *either* side of the same." In the addition of No. 5A to No. 5, the proposal is to build beyond the front main wall of No. 4, and this, it is clear, is unlawful without the written consent of the authority concerned, since it is on one side of No. 5. It matters not that the addition to No. 1, viz., No. 1A, was similarly built some 18 years ago; that, together with the fact that No. 1 and A and B are in the same line, does not assist in the present difficulty, and does not set aside the provisions of the section of the Act above referred to. However it does appear from the plan and on the facts stated, that the local authority is acting somewhat arbitrarily in disapproving the plans submitted. It would not be wise to proceed with the addition No. 5A without first obtaining the necessary consent from the local authority. "Building Line" should endeavour to come to terms with the authority especially, as on the facts it would appear that the difficulty he is in might be overcome by similarly projecting, or rather adding to, Nos. 2, 3, 4 and 5 simultaneously so that there is a continuous building line.

It may be added that the words "house on either side thereof" mean "a house within some near distance, within some degree of proximity, and not one standing some considerable distance away." (See Ravensthorpe, L. B. *v.* Hinchcliffe; 1889, 24 Q.B.D. 168.) Here by the question, the house adjoins that which it is proposed to add to and project.

LAW.

PARTY WALLS: PRACTICE AND DECISIONS

By J. DOUGLAS SCOTT, A.R.I.B.A.

CHAPTER IV.

HAVING considered in the previous chapters the principal decisions under the London Building Act and Common Law concerning party walls, the following pages explain the practice adopted by architects and surveyors in carrying out the provisions of the London Building Act, 1894. When an owner of a building, situate within the Administrative County of London, is about to do any work affecting a party structure, he is required by statute to give the adjoining owner and adjoining occupier notice of his intention, indicating the work contemplated and the time when he proposes to commence the work. The notice must be in writing and is usually prepared by the building owner's architect, who is thereunder generally appointed the surveyor to act for him, but sometimes the architect, especially in complicated cases, prefers to hand over the duties to a more experienced surveyor specially versed in this kind of business.

The notice must be signed by the building owner, and must be served upon the persons entitled to notice, either personally or by registered post in accordance with the directions contained in Part VIII of the London Building Act, 1894. It must not be overlooked that a freeholder is entitled to a notice as well as the lessee or tenant as defined by the Act. Convenient forms of notice can be obtained from the offices of the Royal Institute of British Architects, and it is advisable in filling up these notices to use, as far as possible, the phraseology of the clauses of Section 88 of the London Building Act, 1894, printed on the back of the forms, and to attach a plan and section of the party wall showing the work proposed.

When preparing these notices before a building is pulled down or before an accurate survey of the party wall can be made, one is at times in some doubt as to which are the approximate clauses to quote as applying to the work contemplated, in which case the notice might be worded "any or all the works enumerated in the clauses numbered 1 to 12 on the back hereof but more particularly . . ." (here would follow the description of the work known to be required). It is sometimes expedient to give the notice in such general terms, otherwise any work subsequently found necessary might require a further notice and so cause delay.

A notice becomes invalid if the work to which it relates is not begun within six months after service, and a further notice must be served, with the exception in the circumstances quoted in the case of *Leadbitter v. Marylebone Borough Council, ante.* It is better to serve too many notices on adjoining occupiers, even if some are not strictly entitled to notice, than to discover that you have omitted to serve a notice on some one who is legally entitled to one, as delay and possibly heavy legal costs may be incurred by such omission.

It may here be pointed out that amongst the twelve rights given under Part VIII of the Act, there are no rights for thickening a party wall, but as this is a recognised method in general practice of dealing with party walls in certain circumstances, and can only be done after notice served on the District Surveyor and with his approval, no reputable surveyor is likely to take exception to such work. The only reference in the Act to thickening a wall is found in clause 11 of the Preliminary to the first Schedule.

Unless an adjoining owner is acquainted with a surveyor, upon being served with a party structure notice he usually consults his solicitor, who often recommends an auctioneer-surveyor to act for him; such a surveyor cannot be so well qualified to deal with the constructional points that arise as an architect-surveyor, who is constantly dealing with them. The Act permits one surveyor to act for both parties, but except in very small matters this is not desirable, as the interests of a building owner and an adjoining owner usually differ so materially. It may be pointed out that anyone may be appointed under the Act as surveyor, whether possessing any technical knowledge or not.

The usual practice is for the adjoining owner's surveyor, on being instructed, to inform the building owner's surveyor of his appointment and ask for an interview to inspect the drawings and arrange for the appointment of the third surveyor; in the meantime he inspects the premises and makes himself acquainted with the situation.

The first duty when the respective surveyors come together is to appoint the third surveyor. The building owner's surveyor usually submits a list of three or four names and an architect and surveyor of standing who thoroughly understands this kind of business can usually be mutually agreed upon, and the appointment is made in writing. A form for this purpose can be obtained from the offices of the Royal Institute of British Architects. In practice it is not often found necessary to call upon the third surveyor to act, but this is no reason for appointing an architect friend, merely because he is a friend, unless one is satisfied that he is thoroughly conversant with the duties. In a case in which the writer was concerned, the duly appointed third surveyor, when called upon, refused to act, which would seem to indicate the advisability of making an alternative appointment in the event of the unwillingness or inability of the one first-named to act, but I have never heard of this being done. The Act provides for the contingency of a further appointment, but this involves delay. The third surveyor is not appointed as umpire, as is so often erroneously considered in the arbitration for the settlement of the difference, as the three surveyors are by statute equal in every respect and any two may decide against the third.

This statutory tribunal is empowered to determine every question that may arise on either side within the limits of the notice, including costs, as defined under Section 91 (4), and its decisions are set out in the award that has to be made. An award of the three surveyors or any two of them can be claimed by either party upon any further difference that may arise at any time during the execution of the work.

Although arbitration is not expressly mentioned in the Act, it is clearly intended that the differences are to be settled by this method, as this provides the only means by which an award can be produced. The notice served by the building owner may be regarded as a submission under the Arbitration Act, 1889, and the provisions of this Act can be used as supplementary to those of Part VIII of the London Building Act. Strictly speaking, the notice should be endorsed to this effect and be stamped with a 6d. stamp. The building owner's surveyor then prepares a draft award and submits it to the adjoining owner's surveyor, who approves or amends it as the circumstances require. Any important amendments are best settled at an interview.

Sometimes this procedure is reversed by asking the adjoining owner's surveyor to submit a draft award to the building owner's surveyor, who thus learns the extent of the adjoining owner's requirements, which may be less exacting than those that the building owner's surveyor would have submitted.

If through excess of professional zeal either of the surveyors is too exacting, or if for any other reason agreement cannot be reached, then the third surveyor must be called upon to assist in arriving at a settlement.

Two copies of the draft award as agreed are prepared with plans and sections, and both copies are signed by the respective surveyors, and dated and sometimes witnessed. If the third surveyor has acted, he must also sign. The signing is better done in the presence of each other and need not then be witnessed. It is usual to sign or at least initial the plans attached to the award. The fees stated in the award are paid upon signing it and no receipt is necessary, the execution of the award constitutes their acknowledgment. It is, nevertheless, very usual to find a receipt clause at the end of the award.

The building owner's surveyor undertakes the appropriate stamping of the award and counterpart, which must be with an impressed stamp and not adhesive ones, and must be done within fourteen days of the date of execution, either at Somerset House or at the City office in Telegraph-street. If presented for stamping after this time a penalty will be incurred. The building owner's surveyor retains the award, and hands the counterpart to the adjoining owner's surveyor. The award is conclusive and shall not be questioned in any Court, subject only to the right of appeal within the limits laid down by the Act.

In drawing up an award, the greatest care and clearness should be observed; legal phraseology with its needless repetition of superfluous words is quite unnecessary, and a surveyor should avoid the appearance of acting as an amateur lawyer. No particular form of words is necessary so long as they convey a decision; an alternative course or method of doing certain works may be stated, provided the result is not left conditional on the voluntary performance of these works.

An award should not only state the amount of any sum due from one party to another, but should also direct the payment of that sum. It often occurs that a definite sum cannot be ascertained when settling an award, as, for instance, the payment of the due apportionment of the cost of building a party wall or it may not be deemed advisable to state a definite sum in the award, in which case it must be clearly stated how the sum to be paid is to be ascertained and when it is to be paid. It is usually agreed to ascertain the amount to be paid by measurement, either by the two surveyors, or sometimes by a nominated surveyor, and priced at the agreed schedule rates stated in the award.

Disputes often arise in assessing the expenses referred to in Section 95, where one owner desires to make increased use of a party wall beyond the use he formerly enjoyed, and the question was referred to the Practice Standing Committee of the Royal Insitute of British Architects, who were of opinion that the expenses referred to were the due proportion of the cost at the time of building and not a valuation at the current rates at the time of user.*

The duties of an arbitrator are held to be such as to preclude him from suing for his fees, unless there is a promise to pay them; therefore, the fees of both surveyors, and also those of the third surveyor, if called upon to act, should be stated in the award; but the more general practice is only to include the fees of the adjoining owner's surveyor, and those of the third surveyor if called upon to act, as the appointment of the building owner's surveyor in the notice signed by the building owner, implies a promise to pay.

Difficulty sometimes occurs where there are several adjoining owners or occupiers, as in the case of a block of flats or an office building, where each, or, at any rate, several of the tenants, are entitled to notice and they each appoint their own surveyor. It should be the endeavour of the building owner's surveyor to get them to agree to one surveyor to act for them all. Generally, only one award would be made in respect of any adjoining property as a whole. In the case of several adjoining surrounding properties, where several awards would be necessary the building owner's surveyor should endeavour to obtain the appointment of the same third surveyor in each case, and to keep the awards in the same terms so as to have similar obligations to the several adjoining owners, unless the nature of the work demands otherwise. A form of award will be found at the end of these articles, containing suitable clauses for almost every contingency.

* Since the above was written Judge Lindley in a recent County Court case gave judgment embodying the above principle.

THE LONDON BUILDING ACTS AND THEIR APPLICATION.—III

BY H. V. MILNES EMERSON, A.R.I.B.A.

DEFINITIONS (continued).

In the London Building Acts (Amendment) Act, 1905, which secures to the L.C.C. powers for the provision and maintenance of proper means of escape in case of fire, the interpretation of "owner" is as follows:—Section 6 (1) In and for the purposes of this Act, unless the subject or context otherwise requires:—

(i) The expression "owner" (except as used in the section of this Act the marginal note whereof is "Fees to District Surveyors") means the person for the time being receiving the rackrent of the premises in connection with which the said expression is used, whether on his own account or as agent or trustee for any other person, or who would so receive the same if such premises were let at a rack-rent; but where used in the said section the said expression shall have the same meaning as is assigned thereto by section 5 of the Act of 1894.

Note.—The owner in this section of the Act is defined as the person receiving the rack-rent of the premises, and unless he can prove that an offence has been committed by any other person whom he charges as the actual offender, the owner is the person liable to the penalties imposed by this Act.

The expression "rack-rent" is defined under sub-section II of section 6.

(iii) The expression "upper story" means any story the level of the upper surface of the floor whereof is at a greater height than 50 ft. above the level of the footway (if any) immediately in front of the centre of the face of the building in which any story is situate, or (where there is no footway) above the level of the ground before excavation;

(iv) The expression "high building" means any building any story whereof is an upper story as hereinbefore defined.

Note.—By section 7 of this Act every new building under certain conditions which is a "high building" has to be provided with satisfactory means of escape from fire and to be certified to that effect.

The expression "new building," "existing building," and "certified building" will be found under sub-sections (v), (vi) and (vii) of section 6.

(35) The expression "district surveyor" means every such surveyor who is appointed in pursuance of this Act or whose appointment is hereby confirmed, and shall include any deputy or assistant surveyor appointed under this Act.

Note.—Upon a vacancy occurring in the office of a District Surveyor, the London County Council is empowered to appoint another qualified person in his place, and the Council may also dismiss or suspend any District Surveyor.

District Surveyors are paid fees upon new buildings, alterations, &c., by the builder or owner in accordance with an authorised schedule in the Act of 1894. Under the L.C.C. General Powers Act, 1921, the fees were increased by 25 per cent., and a further increase of 25 per cent. was made as from October 1st, 1921.

(36) The definition of "fire resisting material" has been repealed by the London Building Acts (Amendment) Act, 1905, and the schedule of fire resisting materials is as follows:—

I. FOR GENERAL PURPOSES.

(1) Brickwork constructed of good bricks, well burnt, hard and sound, properly bonded, and solidly put together—

(*a*) With good mortar compounded of good lime and sharp clean sand, hard clean broken brick, broken flint, grit or slag, or

(*b*) With good cement; or

(*c*) With cement mixed with sharp clean sand, hard clean broken brick, broken flint, grit, or slag.

Note.—In general practice, when bonding new brickwork to old, one, two, or more alternate courses should be cut out of the old work for the proper bonding of the new work. Some District Surveyors agree to every alternate four courses. Clean grit or slag allows a certain amount of latitude in the aggregate to be used for mortar.

(2) Granite and other stone suitable for building purposes by reason of its solidity and durability.

Note.—Artificial stone (which could otherwise be termed concrete), of approved manufacture could be used.

(3) Iron, steel, and copper;

(4) Slate, tiles, brick or terra-cotta, when used for coverings or corbels;

(5) Flagstones when used for floors over arches, but such flagstones not to be exposed on the underside, and not supported at the ends only.

Note.—Flagstones when used to cover a void or duct in the floor, must be supported on at least one side in addition to the ends, and the underside must not be exposed directly to the action of fire.

(6) Concrete composed of broken brick, tile, stone chippings, ballast, pumice, or coke breeze, and lime cement or calcined gypsum.

(7) Any combination of concrete and steel or iron.

II. FOR SPECIAL PURPOSES.

(1) In the case of doors and shutters and their frames, oak, teak, jarrah, karri, or other hard timber, not less than 1¾ in. finished thickness, the frames being bedded solid to the walls or partitions.

Note.—The panels of doors must be also not less than 1¾ in. finished thickness.

(2) In the case of staircases and landings, oak, teak, jarrah, karri, or other hard timber, the treads, risers, strings and bearers being not less than 1¾ in. finished thickness and the ceilings and soffits (if any) being of plaster or cement.

Note.—No part of the staircase, flooring to landings, joists, or bearers (with the exception of newels, balusters and rails), must be less than 1¾ in. finished thickness. The staircase can be housed, tongued, or grooved, as necessary, but the outer string, for instance, must not have sunk panels unless such panels are not less than 1¾ in. thick. If desired, the staircase and landings can be wrot and exposed on the underside and the plaster or cement soffit and ceiling omitted.

(3) Oak, teak, jarrah, karri, and other hard timber, when used for beams or posts, or in combination with iron, the timber and iron (if any) being protected by plastering or other incombustible or non-conducting external coating, not less than 2 in. in thickness, or in the case of timber, not less than 1 in. in thickness on iron lathing.

Note.—The protective covering can be adjacent to or kept away from beams or posts if required in order to increase the apparent size of such beams or posts.

(4) (*a*) In the case of floors and roofs—

Brick, tile, terra-cotta or concrete composed as described in paragraph I (6) of this schedule, not less than 5 in. thick in combination with iron or steel.

Note.—In addition to the foregoing, patent floors when made of any of these materials and not less than 5 in. thick, would comply with this regulation.

(*b*) In the case of floors and of the roofs of projecting shops—

Pugging of concrete composed as described in the said paragraph I (6) not less than 5 in. thick between wood joists provided a fillet 1 in. square is secured to the sides of the joists and placed so as to be in a central position in the depth of the concrete; or

Concrete blocks not less than 5 in. thick laid between wood joists on fire-resisting bearers secured to the sides of joists.

Note.—Existing wood floors with a matchlined ceiling could be made fire-resisting by placing 5 in. of concrete pugging between the joists, the matchlining acting as centering. The concrete should in this case not be too wet. Floors with plaster ceilings could be rendered fire-resisting with breeze blocks supported on hardwood bearers.

(5) In the case of verandas, balustrades, outside landings, the treads, strings and risers of outside stairs, outside steps, porticoes and porches, oak, teak, jarrah, karri, or other hard timber not less than 1¾ in. finished thickness.

Note.—A wood batten gangway over the internal gutter of a roof leading from a doorway in a building to a fire-escape at the other end of the roof, is treated as an outside landing and must be in hardwood.

(6) In the case of internal partitions, enclosing staircases and passages, terra-cotta, brickwork, concrete, or other incombustible material not less than 3 in. thick.

Note.—A breeze slab partition 2¼ in. thick plastered one or both sides to a combined thickness of 3 in., fulfils this condition.

(7) In the case of glazing for windows, doors and borrowed lights, lantern or skylights, glass not less than one-fourth of an inch in thickness in direct combination with metal, the melting point of which is not lower than 1,800 deg. Fahr., in squares not exceeding 16 in. sq. and in panels not exceeding 2 ft. across either way, the panels to be secured with fire-resisting materials in fire-resisting frames of hard wood not less than 1¾ in. finished thickness, or of iron.

Note.—The limit of 1,800 deg. Fahr. will allow the use of iron, steel, copper, brass, bronze, or other copper alloys, but excludes the use of lead, tin, zinc or white metal alloys.

III.—ANY OTHER MATERIAL FROM TIME TO TIME APPROVED BY THE COUNCIL AS FIRE-RESISTING.

Note.—Application can be made to the L.C.C. for their approval of a fire-resisting material not scheduled. For instance, they have given approval for a shop ceiling of stamped steel and asbestos fixed to existing boarded ceiling as an alternative to pugging to between the floor joists with concrete.

(47) The expression "the Tribunal of Appeal" means the Tribunal of Appeal constituted by this Act.

Note.—The tribunal of appeal is constituted by section 175, and consists of three members appointed by the Secretary of State, the R.I.B.A., and the Surveyors' Institution, respectively. No 47 is the last definition of the 1894 Act.

MEETINGS

SATURDAY, *January* 29.

Institution of Municipal and County Engineers.—South Midland District Meeting. At Dunstable. 10.15 a.m.

MONDAY, *January* 31.

Royal Institute of British Architects.—Professor Hubert Worthington, A.R.I.B.A., will deliver the Annual Address to architectural students. At 8.30 p.m.

College of Estate Management.—Mr. S. A. Smith on "Valuation of Shops, Factories and Flats." At 5.30 p.m.

WEDNESDAY, *February* 2.

The Institution of Civil Engineers.—Messrs. J. L. Hunt and H. H. Dalrymple-Hay on "Escalator Tunnels and Other Works at Piccadilly Circus." At 6.30 p.m.

Incorporated Institute of British Decorators.—Mr. Z. Carr on "Marbling as a Basis for Broken Colour Effects." At Painters' Hall, Little Trinity-lane, E.C. 8 p.m.

THURSDAY, *February* 3.

National Association of Shopfitters.—Annual Dinner. Restaurant Frascati, Oxford-street, W. 1. 7 p.m.

Chadwick Trustees.—Lecture.—Professor C. H. Reilly on "Developments in Building Methods." At 18, John-street, Adelphi. 8 p.m.

THE BUILDING TRADE

BY-LAWS RELATING TO BUILDINGS AND STREETS.—IV

In our last article we dealt with the difficulties arising out of the by-law-making sections of the Public Health Acts and the recommendations of the Committee on Building By-laws that the technical definitions should be considered with a view to their amendment and that powers should be given to all local authorities alike. It might appear a simple matter to carry out this recommendation by confining the statutes to conferring by-law-making powers in the most general terms, and avoiding all definitions of a precise nature, but in the present state of the law it appears from the Report of the Committee any such apparently simple course would not be possible.

By-laws, as we pointed out in our second article, are by no means the only method by which local authorities exercise control over buildings and streets. Even before the Public Health Act of 1875 was passed, many towns had acted in sanitary matters by local Act, and in some towns the local Acts date farther back than the Public Health Act of 1848. Many of these local Acts are still in force, and other local Acts have been obtained to fill the gaps to which the Committee referred as left by the Public Statutes; for example, the Report states that local authorities have gone to Parliament to enable them to regulate the composition of plaster on the walls of buildings, and to obtain powers as to lighting, in addition to the powers conferred by the public statutes as to ventilation. The effect of this is explained by an example given in the Report. Back-to-back houses for the working-classes are prohibited by statute, but they could be prohibited by by-law and are in fact prohibited in the model codes; but this statutory prohibition was rendered necessary because in certain towns local Acts and by-laws now considered obsolete, but only repealable by the local authorities concerned, are in force, which provide for an open space at the side instead of at the back of the building.

Thus it will be seen that a repeal of the sections in the public statutes would only tend to increase the lack of uniformity, as the legislation stands at present, and before the procedure indicated above, or any other procedure calculated to simplify the by-law-making sections in the public statutes can be adopted successfully, not only must the local legislation be got out of the way, but powers must be conferred by which obsolete by-laws can be repealed.

In a former article we referred to the four methods of control at present in force: (1) Statutes, (2) by-laws, (3) regulations, (4) discretionary powers—the first head being divided into public statutes and local Acts. There is a distinction between "regulations" and "by-laws" under the Public Health Acts. In some other connections, as, for instance, tramways, the word "regulation" is more or less synonymous with the word "by-law"; but under the Public Health Acts, by-laws are local laws authorised by statute but requiring confirmation by the Ministry of Health, whilst regulations made by local authorities require no confirmation, nor publication beforehand, as do by-laws. Under Acts of Parliament there are statutory rules which the local authorities also have to enforce.

The Committee gave examples of matters controlled by regulation, and where discretion can be exercised. Thus the Report states that the connection of a house drain with a sewer is governed by regulation, and the example of a discretionary power was as follows:—By-laws commonly require open space to be left in front of a building to secure the circulation of air, but if a house has been set back farther than the distance made compulsory in the by-law the Public Health (Building in Streets) Act gives the local authority, independently of any by-laws they have made, a discretion to prohibit or allow on the plot adjoining a building nearer to the street than the house already erected.

The Committee recommended that all sections in Acts of Parliament giving powers with respect to buildings and new streets should, so far as possible, take the form of authorising by-laws to be made; that in relation to the control of buildings and streets, by-laws made by the local authority and confirmed by the Ministry of Health should be recognised as the standard method of control, to the exclusion (unless by-laws are clearly the less appropriate method) of direct statutory provisions, of regulations and discretion, and that where Parliament is satisfied that local Act sections are required they should, whenever possible, be in the form of by-law-making powers and should be printed and supplied without charge. This substitution of one form of control, and that by by-laws, seems the ideal, and so far as the codification of the Public Health Acts is concerned, it could be accomplished with very little alteration of the few sections which contain by-law-making powers, and in this connection it should be noted that the Committee was not recommending any general alteration in the Public Health Acts as a whole, but only an amendment and codification of those sections.

In connection with the above recommendations, the Committee suggested that a review of local Act provisions should be undertaken by the Ministry of Health with the object of providing, firstly, that the powers embodied in the more valuable common form clauses should become exercisable so far as possible by by-laws rather than by direct enactment, under one general Act; and secondly, as we have said above, that any gaps which it might seem probable that local legislation would be called upon to fill in future should so far as possible be stopped in advance by an extension of by-law-making powers.

At present, as the Report states, in certain localities local Acts have been obtained to stop gaps experienced under the general powers of the Public Health Acts; but in others, matters which are ordinarily and naturally controlled by by-law have been made the subject of control by local Act, and this causes conflict between the general and the local law, and the local Act provisions cannot be amended with the same facility as by-laws. Leicester, Liverpool, Bradford and Keighley are cited as examples, but this does not reflect upon the local authorities where this is the case, as it generally occurs in those districts where the local authority has been the most active in securing sanitary control, many local Acts having been obtained before the general Public Health Acts were passed, but an example of the drawbacks now attending this system is given in the Report, for where a local Act lays down, for instance, that no new street may be less than a certain width, even if it exceeds that now required by the model codes, the local authority cannot make by-laws permitting a less width, nor could the Ministry of Health sanction them. In the same way the prescribed width cannot be increased. It is satisfactory to note that a move has already been made in the direction indicated by the above recommendations of the Committee, for the Report states that the practice of Parliament as embodied in the standing orders for local legislation is, in the absence of special circumstances which have to be specially reported to the House of Commons, to refuse statutory powers for objects that can be secured by by-laws under the general law, and further, that in recent years the practice has been, when powers analogous to those exercisable by by-laws under the general law are sought, to give a by-law-making power rather than a direct enactment or a discretionary power, the object being that the exact requirements with which persons in the locality will have to comply shall be subject to sections 184-186 of the Public Health Act, 1875, that is, that the requirements shall be subject to confirmation and that copies shall be supplied to ratepayers on application. Other methods of securing control having thus been ruled out by the Committee, we come to the main object of the present articles, which is to consider the working of the by-law system; but before we enter upon this it appears convenient at the conclusion of this article to mention one suggestion that was made to the Committee as it is akin to the subjects we have just been considering. It was suggested by several witnesses that the by-law system led to inconvenient variation between one district and another, and to meet this objection and to save the repetition of common ground in building by-laws it was proposed that the minimum requirements in regard to building should be codified and given statutory force throughout the country, perhaps including in one set of rules not only the present subjects upon which by-laws can be made, but also those which are at present governed directly under the Public Health Acts. The Committee pointed out that there are two ways in which this could be effected: (1) By inclusion in a statute of the actual requirements; or (2) by giving the Local Government Board, now the Ministry of Health, power to make a general statutory order on the analogy of orders made under the Motor Car Acts. The Committee ruled out the first method on the ground that the process of Parliamentary discussion is not calculated to produce satisfactory results in a technical matter of this kind, and the requirements could not be changed, as by-laws can, to meet the alteration of needs and the advance in knowledge.

The second method of a statutory order, the Committee indicated, would not be open to the same objection, as the terms would be settled by the legal staff of the Ministry in consultation with their technical advisers and could be altered without difficulty as necessity arose, and therefore, if uniformity was an essential, this would be the only method of obtaining it, but the Committee did not recommend it. In the first place, this method was not put before them spontaneously by the witnesses, and they were not prepared to give evidence upon it without consideration; and in the second place the Committee considered that although uniformity should as far as possible be sought, on the evidence before them they could not say it was necessary, and they could not recommend that the system set up in 1858, of distinctly local, and therefore varying legislation, in the shape of by-laws should be superseded by centralised legislation in the shape of orders of a Government Department, a procedure which, though better adapted to the purpose than Parliamentary legislation, would involve much time and labour, and negotiation with various conflicting interests.

When we come to consider the operation of the by-law system we shall have to refer at length to this question, and we have only referred to this suggestion here as having been made to the Committee because it has a bearing upon the subjects we have dealt with, the methods of general control, and especially of control by Statute.

NOTES ON CURRENT LEGAL CASES

Workmen's Compensation.

IN our issue for December 24 last we considered a decision of the House of Lords in the case Ocean Coal Co. *v.* Davies, which involved some consideration of the previous cases that had been decided on section 14 of the Workmen's Compensation Act, 1923 (which is section 12 in the Act now in force, the Workmen's Compensation Act, 1925), which introduced new provisions where employers seek to stop or diminish weekly payments.

Hitherto the decided cases in the Law Reports have mainly turned upon difficult questions which have arisen in connection with this most abstruse section where the procedure indicated in the third paragraph of the section has either not been followed at all or only followed in part. A case has now been carried to the Court of Appeal, Rhodes *v.* Digby Colliery, Ltd. (1927, 1 K.B. 152), where the procedure indicated in that paragraph was faithfully followed by the employers and the workman and yet difficult questions arose. We can state the facts shortly. On December 15, 1917, a workman in the course of his employment whilst pushing a wagon slipped and slightly ruptured himself. The employers admitted liability, and paid full compensation—20s. plus 15s. war addition—down to November 20, 1925. The employers then being of the opinion that the workman's incapacity was no longer total, followed the procedure provided by section 12 paragraph (3)—they had the workman examined, and the opinion of their medical practitioner bore out their view that the incapacity was not wholly due to the accident of eight years back (the medical man attributed 80 per cent. to old age and 20 per cent. to the rupture), and they served the workman with a copy of this certificate, at the same time intimating to him that it was their intention to reduce the weekly payments by 20s. a week. The workman also took the step dictated by the section, and served a counter medical certificate on the employers which, according to the statement of facts made by Lord Justice Scrutton "was to the effect that the man was totally incapacitated." Both parties then agreed to refer the question to the medical referee, and the employers then, acting under the section, paid into court the sum of £2. How this sum was arrived at is not clear, but the Master of the Rolls states that the Court was informed that it was not to be taken as a total sum, but as an indication that the employers intended to follow the procedure provided in the section, and no question arose as to this. The medical referee certified that the workman was fit for light work and able to walk a reasonable distance (two miles) to his work. (We only give the general effect of the above certificates not their contents in full.)

The employers considered that this certificate justified the action they were taking in reducing the compensation but, this being disputed, they applied to the registrar under the section and the registrar decided in their favour as he made an order that the £2 paid into court should be paid out to them. The section provides an appeal to the judge; the workman did not avail himself of this, but two applications were filed on his behalf, first an application for arbitration and secondly an application for a review. The first of these applications is the subject of this appeal, but the second application is still in a sense *sub judice* as it may yet be the subject of decision. The first application was heard by the County Court judge, and he made an award on the basis of total incapacity for 35s. a week from December 3, 1925, the date the compensation was reduced to 15s.

It will be seen this decision rendered all the proceedings under section 12 nugatory.

The Court of Appeal held that where a definite decision has been given when the provisions of section 12 have been complied with, the matter cannot be reopened unless new circumstances have arisen which would justify a fresh decision. Lord Justice Scrutton appears to have based his decision on the rather narrower ground that it was clearly wrong in the judge, as arbitrator, to think he had jurisdiction to decide a question which had already been decided by the registrar in proceedings in which there was a right of appeal to the judge. The Court pointed out that a change in the circumstances may well occur in industrial diseases which leave a susceptibility to disease, and they referred to Prendergast *v.* Lancasters Steam Coal Collieries (18 B.W.C.C. 494). There a man certified in August, 1917, as suffering from nystagmus had been paid full, and afterwards partial, compensation for incapacity down to July, 1924. The employers then proceeded under section 12, paragraph (3), and on August 18, 1924, the medical referee had certified that the man was not suffering from nystagmus but from pains in the eyes due to astigmatism. The employers thereupon stopped the weekly payments. On December 29 of that year the workman claimed compensation, and at the hearing of the arbitration in March, 1925, the judge at the request of the parties referred the question to a medical referee who certified that when he examined the man on April 15, 1925, he was then suffering from nystagmus, and that he was thereby incapacitated for work underground, and in answer to the agreed questions he also certified that this was a continuation of the attack from which he suffered in 1917.

The County Court judge found that, although the certificate of August, 1924, established that at that time the workman was not actually suffering from nystagmus, yet he was then and at all other material times affected with a proneness to a recurrence, and that at the date of the hearing and of the certificate of April, 1925, he was suffering from the disease in the sense of showing active symptoms, and had been suffering from the disease so as to come within section 8 of the principal Act, 1906 (section 43 in the Act of 1925). The Court of Appeal affirmed this award, holding that the judge, after the certificate of August, 1924, was at liberty to consider the matter afresh, as that certificate was conclusive only of the matters referred to at that time, and was not *res judicata* between the parties, and he was justified in inferring from the certificate of April, 1925, that there was special susceptibility to the disease, and that that susceptibility had taken effect after the certificate of August, 1924.

This case must be compared with Crewe *v.* Rhodes (18 B.W.C.C. 303), a case very similar to that now decided. There the employers and the workman had followed the procedure of paragraph (3), and the report of the medical referee had been in favour of the employers; but the workman had applied for arbitration and had adduced further evidence at the hearing based upon a skiagraph made at the hospital, and directed to contradict the opinion expressed by the medical referee. The County Court judge had refused to admit this evidence and the Court of Appeal affirmed his decision on the ground that the certificate of the medical referee is final and conclusive as to the matters certified. The decision now given merely adds to this latter proposition the qualification, "unless a change in the circumstances can be proved," and this is a principle which has always been applied when a review of weekly payments has been applied for. This section represents one of the many attempts to introduce "rustic justice" in connection with Workmen's Compensation, and the result has in every instance been the same dire confusion and an increase in litigation.

On quite another question, we may briefly here note another point decided in the very recent case, Athey *v.* Pickerings, Ltd. (*Weekly Notes*, January 8, 1927). Under section 8, subsection (3) of the Workmen's Compensation Act, 1925, the children's allowance where there is a widow or other member of the workman's family wholly dependent upon him and children under fifteen years of age, is arrived at by multiplying the average weekly earnings of the workman by the number of weeks in the period between the death of the workman and the date when the child will attain the age of fifteen years. If the workman's earnings are less than £1, the sum so multiplied is to be £1, but if the earnings exceed £2 then the sum to be multiplied is £2.

A workman died from injuries sustained in his employment on April 30, 1926, leaving a widow wholly dependent upon him. On July 9, a posthumous child was born to her, and the County Court judge calculated the sum due to the child as from the date of the man's death until the child attained the age of 15. On appeal it was contended for the employers that if the child's birth was thus antedated, the compensation should be calculated as for fifteen years from that date and not to the date when she would actually attain fifteen years, but the Court of Appeal dismissed the appeal, holding that the terms of the Act were plain defining the two termini of the period clearly, viz., the death of the workman and the date when the child will attain fifteen years.

Insurance : Answers to Proposal Forms.

IN our issue for September 30, 1921, we drew attention to a decision of the Privy Council in connection with answers in proposals for insurance which an intending assured person has to answer. The decisions of the Privy Council are not actually binding on the Courts of this country, though always treated with the greatest respect, and as the same question has now been decided in the House of Lords we think a short note of the cases may be useful.

The case is Glicksman *v.* Lancashire and General Assurance Company (1927, A.C. 139). Glicksman, an illiterate person who could speak little else than Yiddish, on November 9, 1922, he being then in partnership with one Roman carrying on a business as ladies' tailors in the Commercial-road, entered into negotiations with the above Company to insure the stock-in-trade against burglary. A proposal form was sent him which contained amongst other questions one which asked if any other company had declined to accept, or refused to renew, his burglary insurance, and at the foot of the form was a declaration to be signed by the proposed assured that the answers were true, that no information had been withheld that might tend in any way to increase the Company's risk, and agreeing that this declaration and the answers given should be the basis of the contract.

The proposer answered this question, "Yorkshire accepted, but proposers refused on account of fire proposal." Now what, in fact, had happened was this. In 1916 Glicksman had started business at those premises with his cousin, but two years afterwards the cousin had retired from the business and during 1918 to 1922 Glicksman had carried on business alone. During that period on June, 1919, Glicksman had made a proposal for burglary insurance to the Sun Insurance Office, which was refused. In 1922 he had entered into partnership with Roman, and that subsisted at the time the present proposal was made, but this partnership was dissolved very shortly after the present proposal was made.

In the Court of Appeal a good deal was made of this point of partnership because on behalf of the assured it was contended that the answer was made on behalf of the partners jointly and as a firm there never had been a former refusal, but, on the other hand, there were other questions which, if answered correctly, could only apply to the assured, for instance the length of time the premises had been occupied, but it is unnecessary to deal with this question as in the House of Lords the case was decided on the simple question of concealment of a material fact. Lord Dunedin laid down the law as follows: "A contract of insurance is denominated a contract *uberrimæ fide*. It is possible for persons to stipulate that answers to certain questions shall be the basis of insurance, and if that is done there is no question as to materiality left, because the persons have contracted that there should be materiality in those questions; but quite apart from that and alongside of that there is the duty of no concealment of any consideration which would affect the mind of the ordinary prudent man in accepting the risk." Here it was brought to the knowledge of

the claimant that it was a material fact to disclose whether a policy had been refused, and this fact not having been disclosed the policy was void.

The decision is, perhaps, made the stronger because under the circumstances of this case some members of the House considered the case one of great hardship. The claimant was very illiterate, and in the first instance he had been met by the allegation that there had been no burglary and no stock in trade, an allegation which entirely failed at the reference, but in the course of his examination the claimant mentioned that he had been refused by another office, and then an amended defence was put in by leave raising this point as to concealment. We mention this as showing that this was not a case where the rigid enforcement of the law was called for by a gross act on the part of the claimant, but that it is an inflexible law which persons entering into policies should keep well before their minds.

NATIONAL FEDERATION OF BUILDING TRADES' EMPLOYERS

ANNUAL DINNER.

THE annual dinner of the National Federation of Building Trades' Employers was held on Tuesday, January 25, in the Grand Hall, Hotel Victoria, Mr. F. G. Hodges, F.I.O.B., President, in the chair. The company included Major Harry Barnes, Mr. E. W. King, Sir David Milne Watson, Mr. J. B. Forbes Watson, Alderman Stephen Easten, Mr. T. Barron, Alderman R. Coppock, Sir J. Walker Smith, Mr. E. Gwynne Vevers, Mr. G. A. Coulson, Mr. Wm. H. Nicholls, Mr. S. W. Millburn, Col. J. Mitchell Moncrieff, Mr. F. Thorne, Mr. A. J. Forsdike, Mr. R. B. Chessum, Mr. S. Smethurst, Mr. J. C. Smith, Mr. G. H. Biscoe, Mr. Jno. Croad, Mr. P. J. Spencer, Mr. A. N. Coles, Mr. R. F. Seward, Mr. W. Thorpe, Mr. J. Kelly, Sir Edwin Airey, Mr. J. H. Barker, Mr. W. W. Webster, Mr. A. H. Adamson, Mr. W. F. Gibson, Mr. J. S. Earnshaw, Mr. J. E. Jones, Major A. P. W. Bamberger, Mr. E. J. Strange, Mr. W. E. Collier, Mr. J. M. Macfarlane, Mr. F. Winterbottom, Mr. J. Denver, Councillor R. Charlesworth, Mr. A. G. White, Mr. S. G. Sapcote, Sir Harry McLaughlin, Mr. H. Bell, Mr. W. H. Hope.

After the loyal toasts had been honoured,

Mr. E. W. King (Senior V.-P.N.F.B.T.E.), proposing the toast of "The Architects and Surveyors," said the architects, surveyors, and builders had much in common, and everything that was possible to foster and maintain the most friendly relations between the three should be done. At the conferences of the Architects' and Builders' Joint Consultation Board many knotty problems were discussed and solved to the satisfaction of all concerned. With regard to the Conditions of Contract, he was sorry to say they did not see eye to eye with their architectural friends on this subject. He hoped on the particularly knotty problem under discussion now—that of arbitration—that it would not be long before negotiations were resumed, and that the result of those negotiations would bring forth a form of contract which would be satisfactory to the builder, to the architect and the building owner. With regard to the surveyors, he desired to thank them for their courtesy. They had been of considerable service to the industry.

Major Harry Barnes, F.R.I.B.A., responding, said it was a privilege to be allowed to respond to that toast. He sat not only in the presence of an organisation which covered the whole country, but an organisation which was linked up with an international organisation of which an Englishman had the honour of being president. In this new year there were two or three matters of great importance to the profession and the industry that they all hoped to see settled. First of all there was the question of the training of apprentices which was at the very foundation of all their work. He hoped before the present year was out that they would see throughout the whole country the closest co-operation between architects, builders, and those operatives led by Mr. Barron and Mr. Coppock in a real attempt to get the training of the apprentice craftsmen put upon a thoroughly sound footing. With regard to the Registration Bill, the R.I.B.A. looked upon it as not being a beginning, but as being the end of an extraordinary effort which they had been making for over fifty years to train men in the principles and practice of architecture. They had built up a great system of architectural education which was linked up with the general education of the country. On the Board of Education they had representatives of universities, public schools, the Institute of Builders, and many representative bodies. For nearly half a century they had been able to set a high standard of architectural education and they were pushing forward the Bill so that some sort of qualification must be obtained before a man could be entitled to call himself an architect.

Col. J. Scott Moncrieff, C.B.E., M.Inst.C.E., proposing the toast of "The National Federation of Building Trades' Employers," said he was amazed at the huge organisation that had been built up by the builders. He congratulated them on their success.

The President said with regard to the National Federation, they could look back during the past year to a record of progress, and to the future with a spirit of optimism. A year ago, they were carrying on the industry under a condition of difficulty, so far as their relations with their operative friends were concerned; but it was a pleasure to be able to record that they had now concluded, after protracted negotiations, an agreement with the National Federation of Building Trades' Operatives, the organisation which controlled the large majority of operatives in the building industry, and this, they hoped, would ensure peace and stability for a considerable period. Peace and stability were only attainable when both sides were animated with a desire to attain that object. They had with them for the first time at their annual dinner Mr. T. Barron (the President of the National Federation of Building Trades Operatives), and the Secretary of that organisation (Mr. R. Coppock) and Mrs. Coppock. Their presence was highly appreciated as an indication of the spirit of goodwill which existed between the two bodies and which was absolutely essential if the industry was to perform its duty to the public and to the nation. As they had already heard, negotiations had been proceeding in connection with the new Form of Contract. These negotiations had proceeded for a considerable period with agreement and success, but they had now struck a rock. The Drafting Committee had broken down in their negotiations on a particular point, and the principle involved must either be settled by an independent arbitrator, or all the work, trouble and money that had been expended must come to naught. Continuing, the speaker said he desired to make an earnest appeal that before that course was taken, the Drafting Committee should once more get round the table to see whether they could not by mutual goodwill overcome the difficulty. He could not believe it was beyond the wit of the able men who composed that Committee to get over the difficulty, if both sides were full of that goodwill of which they had heard so much that evening. It must be evident to everyone that a mutual agreement reached in goodwill must operate more effectively than an agreement where a certain section was imposed upon, one side or the other, by the decision of an arbitrator. With regard to the housing position, they would all be aware of the enormous progress that had been achieved by the industry. Here he desired to give every credit to their friends, the operatives, for the willing co-operation they had given to the industry. Everyone present knew that the housing subsidy was to be considerably reduced on September 30 next, and there were already signs that local authorities were making selfish attempts to reap the best possible benefits from the present subsidy; they were proposing to flood the market with housing contracts with time limits, which it was absolutely impossible for the industry to observe. This could only result in trouble between employers competing for labour and materials, which would inevitably bring disruption in its train. He therefore appealed to local authorities and beyond them to the Ministry of Health, to be wise and content in their housing progress and to restrict their housing contracts to the capacity of the manpower of the industry. With regard to the National Federation of Building Trades' Employers itself, he unhesitatingly claimed that the organisation from every point of view stood in a stronger position and on a higher plane than ever in its history. All the members present knew the steps that were taken in the re-organisation of the administrative staff some fifteen months ago. The step they then took had been eminently successful. He was confident that the improvements already achieved were only the beginning of greater and further improvements in the future. He sincerely hoped, as he believed they all did, that Sir Walker Smith would be with them for many years as their guide, counsellor, and friend. Continuing, the President said his last call was a call to service. They had met with heavy losses in the personnel of the industry during the past twelve months through the death of old and trusted colleagues. Their advice and support would be sorely missed, but the work of the Federation must proceed, and others, particularly the younger members, must carry on the work that their late friends had had to lay down. Building trade employers were entrusted with the control of the second largest industry in the country, and it should be a matter of personal honour to dedicate a fair proportion of time and money towards its improvement. To those who carried on the work it would be a long way to travel; the work would be hard, but it carried with it great compensations.

The toast of "The Ladies" was proposed by Sir Harry McLaughlin, K.B.E., F.I.O.B., to which Mrs. F. Thorne suitably responded.

Mr. A. J. Forsdike, F.I.O.B. (P.P.N.F.B.T.E., and President Institute of Builders), proposed the toast of "Our Guests," and Mr. E. Gwynne Vevers, C.E. (President, Institute of Clayworkers), responded.

Mr. T. Barron (President, National Federation of Building Trades' Operatives), said he personally appreciated the kindly courtesy that had prompted the invitation to the President and General Secretary of the Operatives' Federation. Not only did they personally appreciate it, but the whole of the membership did. While they knew that sitting down at table would not heal their difficulties, certainly it helped to smooth some of them away. He would like to pay tribute to the many times during those protracted negotiations that difficulties had been smoothed away by the genial conduct of their chairman—Mr. Hodges. They were oftentimes indebted also to the dry humour of Mr. Forsdike. When they were speaking of peace in industry, it would be just as well to try to define what was meant by that, because there was no reason for saying smooth things to each other unless they knew what they meant. They could not have peace in industry if that meant simply a kind of negative acquiescence. That would not bring peace, because peace was not of a static quality, it was a positive kind of thing. They knew that peace could not be obtained in industry so long as there were conditions obtaining in sections of the industry which could not be tolerated. He thought, however, that agreement could be reached, by which they could rectify those injustices. While they had taken part in disputes, both sides, he thought, could have done much better if they had gathered round a table and thrashed matters out. He believed that was the only way they could have peace in industry. The primary meaning of industry was not for making profit or paying wages. To his mind they could read into it that the whole idea underlying industry was service—that they might serve the people and one another.

EARNINGS AND HOURS IN THE BUILDING TRADE, 1924

IN 1925 the Ministry of Labour instituted an inquiry into the earnings and hours of labour in the building and allied industries, including public works construction, electrical installation, etc., inviting returns from employers, and the results of this inquiry are published in the Ministry of Labour *Gazette* for January. The returns relate to the year 1924, four dates being chosen—viz., January 19, April 12, July 12, and October 18, but as regards the building trade, as a strike was in progress on July 12, the nearest week giving normal results was selected—that ending July 5.

Earnings.

We only give the averages for the four weeks thus chosen, tabulated from 12,883 reports received from employers as to earnings. Males 78,728, average earnings 58s. 2d.; females 24, average earnings 25s. 7d; all workers 79,452, average earnings 58s. 1d. In a note is stated that owing to intermittent engagements some workers may have been returned by more than one employer, and the elimination of this factor would tend to increase the earnings shown.

Normal Hours of Labour.

This table refers to 277,873 workpeople, and shows the proportion of the workers whose normal weekly hours, exclusive of meal times, fell within the limits stated, together with the average normal hours.

Percentage of Employees whose normal weekly hours were—

Week ended	Under 44	44	44½ to 46¾	46½	47 to 47¾	48	Over 48	Average normal weekly hours.
	per cent.	per cent.	per cent.	per cent.	per cent.	per cent.	per cent.	
January 19	3·1	75·3	3·2	2·7	7·5	3·0	5·2	44·7
April 12	0·7	67·8	2·2	9·2	5·3	3·0	11·8	45·3
July 12	0·7	50·8	2·1	24·3	6·3	2·6	13·2	45·9
October 18	1·0	66·2	2·1	10·5	6·1	2·5	11·6	45·4

Of the operatives whose normal hours exceeded 48 per week, about two-thirds at each date were working 49 to 50 hours.

Hours actually Worked and Average Hourly Earnings.

In this table the figures only relate to 163,995 workpeople, and as all employers were unable to give particulars of the total number of hours worked, the average weekly earnings obtained by multiplying the average hourly earnings shown in the table do not correspond exactly with the average weekly earnings shown in the first table.

Week ended	Average hours worked.	Average hourly earnings.
January 19	43·2	15d.
April 12	45·0	15·5d.
July 12	45·4	15·6d.
October 18	45·1	15·8d.
Average for four weeks	44·7	15·5d.

Extent of Short Time.

The last table shows the proportion of workpeople covered by the returns, 254,309, who were reported to be working less than full time, together with the hours lost per week and the average time lost by all the workpeople covered. Those who "stood off" for the whole of any of the weeks specified have been excluded and regarded as unemployed. The *Gazette* states that the amount of broken time in the building trade depends upon weather conditions and the figures may be affected if the weather was not normal in the weeks under review. Also it appears possible that some employers may not have included lost time due to weather conditions in their returns.

Week ended	Proportion of workpeople on short time.	Average Number of Hours lost by: Workpeople who worked less than full time.	Average Number of Hours lost by: All workpeople covered by the returns.
January 19	2·4	10·6	0·3
April 12	1·1	8·7	0·1
July 12	0·9	13·7	0·1
October 18	0·8	10·0	0·1

Wages have increased in the building trade since the year 1924 to which these returns relate. In the Summary for the year 1926 contained in the Labour *Gazette* particulars are only given as to 43,500 workpeople in the building and allied trades, and the total net amount of increase in the rate of weekly wages of those affected was put as £5,000 in 1925, and £7,000 in 1926.

UNSIGHTLY BUILDINGS

IN order to preserve Britain from being spoilt by unsightly buildings, Mr. Chamberlain recently stated that he was giving consideration to the question whether statutory powers might not be given to local authorities to control the siting and elevation of all buildings in their areas.

On this point (says the *Times*), the action recently taken by Edinburgh is of special interest. In view of the many historic buildings in the city, it has been thought desirable that the character and appearance of all buildings proposed to be erected, re-erected, or altered, should be controlled. A clause has been inserted in the new Edinburgh Corporation Act giving power to the Dean of Guild Court to order alterations in the elevation, or design, or materials of buildings if they think it necessary and expedient.

The Dean of Guild Court is the building tribunal of the city and is composed half of town councillors and half of persons skilled in plans and the building crafts. The Court acts quite independently of the Corporation, save in certain limited prescribed matters. If any person is aggrieved by an action taken under this new Act, he can appeal to the Corporation. In order to assist the Corporation in exercising these powers, a Planning Advisory Committee of four members is being constituted. One member will be nominated by the Secretary of State for Scotland, one by the Royal Scottish Academy, one by the Incorporation of Architects in Scotland, and one by the Corporation. In England, both Bath and Oxford have also taken action with a view to controlling building in their areas.

Covent Garden Market.

The Covent Garden Market Special Committee of the Westminster City Council report that they are of opinion that the proposal to remove the Market to the Foundling Hospital site is not in the interests of Westminster, and should be opposed by the Council. The Law and Parliamentary Committee support these views and recommend that a petition from the Council be presented against the Covent Garden Market Bill. The St. Pancras Borough Council have been recommended by their Parliamentary Committee that a petition be presented against the Covent Garden Market Bill. It is also understood that a similar course of action has been recommended to the London County Council by their Parliamentary Committee, and that in due course a petition will be presented.

BUILDERS' FOREMEN AND CLERKS OF WORKS INSTITUTION

THE annual dinner of this Institution was held on Saturday evening, January 22, in the King's Hall, Holborn Restaurant, Mr. A. B. Falkner, F.I.O.B. (P.P.L.M.B.A.) presiding over a gathering of about 400.

After the customary loyal toasts had been honoured,

The President, proposing the toast of "The Provident Institution of Builders' Foremen and Clerks of Works," said he would like first of all to refer to the great disappointment which they all felt at the absence of Mr. Archie Colls, who met with an accident a few days before, breaking one of the small bones in his foot. Mr. Colls had written expressing his disappointment and wishing them all a successful evening. The Institution, he continued, had been in existence for 85 years. From small beginnings it had gradually increased its usefulness, until last year it paid out in pensions no less a sum than £1,100 9s., making a grand total of £29,595 since its formation. There was no one with whom the builders and contractors came more in touch than those who formed the membership of that Institution. They were held in the highest esteem because they shared with the builders their responsibilities. If the Institution's usefulness was to be increased, the funds must be increased. No builder would like to think that anyone who had loyally supported him should by any misfortune be in need. They might not be able individually to do what they would wish in that direction, but here was a form of insurance brought about by a number of them contributing a small amount annually. This fund had been generously supported by several of his builder friends, and he would like to see it supported to a much larger extent.

Mr. J. Bonsey, President of the Institution, responded.

Mr. A. H. S. Barrett, proposed the toast of "The Master Builders and Contractors," and in response Mr. A. H. Adamson, F.I.O.B. (P.P. L.M.B.A.), said everyone was looking forward to a revival of trade in this country, and this could only be brought into being by the mutual confidence and goodwill of the employers and operatives. He was glad to note that there were several members of his own Association present. He felt sure that the members of the London Master Builders' Association took a keen interest in the Institution, because they thought it was a means of getting together and learning to know one another better. Speaking of the necessity for goodwill and co-operation, the speaker mentioned the negotiations that the L.M.B.A. had recently had with members of the National Federation of Building Trades Operatives (London district). Some very useful meetings had taken place. The L.M.B.A. put forward certain proposals for the alteration of the rules, with the result that a joint recommendation had been sent forward for approval to the National Joint Council for the Building Industry.

Proposing the toast of "The Visitors," Mr. Roland B. Chessum, F.I.O.B. (President, International Federation of Building and Public Works) said, as a member of the Institution, he desired to offer to all the visitors present a most cordial welcome. It had been his experience that evening, and he was confident that it was the opinion of members, that their functions would be much shorn of pleasure and cordiality were they not able to welcome so many visitors.

Mr. P. J. Spencer, B.A. (Secretary, Institute of Builders), responding, said he was delighted to be present because the Institution was a voluntary benevolent institution, free from those compulsory elements of benevolence which were so common to-day. He was also glad to be present because of the warm corner he had in his heart for their chairman, who was a man who devoted himself to all sorts of good works on behalf of the industry, in connection with which there was no material reward whatever.

Mr. Wm. Woodward, F.R.I.B.A., proposed the toast of "The Chairman." The toast of the "Honorary Secretary" was proposed by the chairman, and Mr. Ernest Searchfield replied.

RATES OF WAGES IN THE BUILDING TRADE

Every endeavour is made to ensure accuracy, but we cannot be responsible for errors.

	Masons	Bricklayers.	Carpenters Joiners	Plasterers.	Slaters.	Plumbers.	Painters.	Labourers

NEW BUILDINGS IN LONDON

Abbey Wood.—FACTORY.—Extensions to the British Domolac Co.'s factory in Harrow Manor-way, Abbey Wood, are being carried out by Messrs. W. Martin, contractors, of Eltham. Mr. R. Kevan, of Bank Chambers, High Holborn, W.C.1, is the architect. The constructional steelwork is by Messrs. Young & Co., 6, Queen Anne's Gate, S.W.1.

Brixton-road.—CINEMA.—Mr. E. A. Stone, of 20, Berkeley-street, W.1, is the architect for the new picture theatre which is to be erected in Brixton-road, S.W.2. This theatre is to contain a dance floor as well to accommodate 2,000 persons at a time. The cost of this building, cinema, and dance hall together, will be about £250,000. Messrs. Griggs & Son, of Westminster, are the builders.

Fulham Palace-road.—CLUB.—Messrs. Wallis Gilbert & Partners, 29, Roland Gardens, S.W.7, are the architects for a new club which is being erected on a corner site at Fulham Palace-road and Silverton-street, W.6. This club is for the local Conservative Association. Messrs. George Newton & Hill, 93, Southwark Bridge-road, S.E.1, are the builders.

Kensington. — BUILDING. — The London County Council has given consent to the erection of buildings upon a site on the northern side of Kensington-road, next to Melbury-road, and extending next to Kensington-road, between Melbury-road and a proposed street and next to Melbury-road, between Kensington-road and a further proposed street. The application has been submitted by Messrs. Josephs, architects, of 2, Paul's Bakehouse-court, E.C.4, on behalf of Messrs. M. & E. J. Hill.

Porchester-road.—LIBRARY.—The Paddington Borough Council have accepted the tender of Messrs. Perry & Co. (Bow), Ltd., at £85,862, for the erection of a public hall, library and shops in Porchester-road, W.2. The architect for the scheme is Mr. H. Shepherd, F.R.I.B.A., 80, Queen's-road, W.2.

Praed-street.—EXTENSIONS.—Four new wards and two new operating theatres are to be erected above the existing buildings of St. Mary's Hospital, Paddington. W. Three-fifths of the sum required to build the extension has already been raised. The architect is Mr. E. Stanley Hall, F.R.I.B.A., 54, Bedford-square, W.C.1. No building contract has yet been let.

Regent-street.—HOTEL.—A new hotel, which will include the reconstructed Oddenino's Imperial Restaurant, in Regent-street, is now being erected. It is to have two main entrances —one from Regent-street, and the other from Glasshouse-street—and shops will occupy both frontages. The contractors for the new hotel, which will cost £250,000, are Sir Lindsay Parkinson, Ltd., of Blackpool. The architects for this scheme are Messrs. Yates, Cook & Darbyshire, 43, Great Marlborough-street, W.1.

Shepherd's Bush-road.— BUILDING. — The London County Council has agreed to the erection of a building upon a site on the south-western side of Shepherd's Bush-road, adjoinnig the Southern Railway, for The Anglo-American Oil Co., Ltd. The plans have been prepared by the Company's own architects' department. Messrs. Lister & Co. are the builders.

St. James's Park.—IMPROVEMENTS.—In their programme for 1927 the Underground Railways recommend that work be commenced on a scheme for improving St. James's Park Station, and also on a new office building which will be used in part for the housing of the Underground administrative staff. Messrs Adams, Holden & Pearson, of Knightsbridge, are the architects.

Whitechapel-road.—INSTITUTE.—Mr. Bernhard Baron has given to the London Hospital a sum of £25,000 for the endowment of the Bernhard Baron Pathological Institute, towards the cost of the building. The plans for this work have been prepared by the Hospital's Surveyor, Mr. J. Oatley, and the builders are Messrs. Gaze, of Kingston-on-Thames.

York-street.—ALTERATIONS.—Messrs. J. & W. Stewart are carrying out alterations and decorations to 2, York-street, for The Works Development Co., Ltd.

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asterisk are advertised in this number. Certain conditions beyond those given in the following information are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or any tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; and that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the names of those willing to submit tenders, may be sent in; the name and address at the end is the person from whom or place where quantities, forms of tender, &c., may be obtained.

TRADE NEWS

Asphaltic Slag for Roads.

The tender of William Shepherd & Sons, Ltd., of Milkstone, Rochdale, has been accepted by the Urban District Council for work in Railway-road, from Bradshaw Bridge to Moss-road, Urmston. The work comprises new channelling, also asphaltic slag and sett paving to carriageway.

The "Adelphi" Door.

Under this heading, the Woco Door Company have issued a brochure, in which is set forth particulars of their attractive doors, which, while reasonable in price, are suitable for all classes of house. A catalogue will be sent upon request, or the actual designs may be inspected at their West-end show-room, 55, Rathbone-place, W.

Wired Pale Fencing.

Messrs. The Lewisham Timber Co., Ltd., have issued recently their catalogue No. C 5, in which are contained details of their various styles of wired pale fencing suitable for enclosing land for all purposes. The catalogue will be sent upon request to the company, at Lewisham Bridge, S.E. 13.

Ladders and Trestles.

We understand that Messrs. Stephens & Carter, Ltd., the proprietors of Spencer's patent travelling crane, have a large stock of ladders, barrows, steps, extension ladders, &c., together with imported scaffold-poles, putlogs and spruce scaffold-boards, at their chief postal address at Paddington-green, W. 2. This firm also makes a speciality of lending plant on hire.

Second-hand Scientific Instruments.

Messrs. C. Baker's, of 244, High Holborn, January catalogue contains details of a number of fine surveying instruments, theodolites, levels, drawing instruments, scales, &c., which are being sold at second-hand prices. Messrs. C. Baker will gladly send their catalogue, containing details of their full collection, upon request.

Paddington Goods Station Lighting.

The new goods station sheds of the G.W.R. at the rear of Paddington Station, London, are we understand, illuminated by "Geco" dispersive reflectors and 500-watt Osram gas filled lamps, supplied by the General Electric Co. Ltd., Magnet House, Kingsway, London, W.C.2 This installation—the first of its kind—was the subject of very careful consideration and planning, and was only adopted after the carrying out of experimental tests of great severity. The results attained are reflected in the fact that a further contract has been placed for the equipping of the G.W.R. Temple Meads Goods Station Bristol, with 600 similar units.

Cost of Building.

Sir Kingsley Wood, M.P., speaking at the annual dinner of the Eltham Conservative Association at Eltham, said that houses were costing too much money, and they would have to be careful not only to do nothing to increase housing cost, but do everything possible to reduce it. The most promising way to bring about a reduction of the cost of building was to reduce the subsidy. Rents were still too high for large numbers of people and the great problem was to provide suitable houses for the poorer members of the community. The Minister of Health was anxious, in order to obtain cheaper houses, that the housing grant should in future be used as far as possible for the provision of a rather less costly house than that to which builders had so far been giving special attention. The local authorities were being urged to devote themselves especially to the provision of a type of house which, with the aid of the subsidy, could be let at rents within the means of the less well-paid workers. Private enterprise in building would be further encouraged also through the judicious exercise of the powers of local authorities to make advances. The housing efforts of the last five years represented one of the most remarkable advances in social progress since the war.

PROPOSED NEW BUILDINGS & OTHER WORKS*

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

ACCRINGTON.—The Corporation are likely to give £150 towards the erection of a tramway passengers' shelter at Moor End.

BARKING TOWN.—The U.D.C. recommend the erection of blocks of six flats on each of the corner sites on the Eastbury estate, and two flats on land situate at the junction of Bifrons-street with Gascoigne-road. The Engineer is to report to the Council in committee as to the estimated cost of the erection, and that the flats are to be erected on the land at the junction of Bifrons-street with Gascoigne-road be utilised for the rehousing of persons displaced by the Parsons-row improvement scheme.—The Council also recommend that the plans for the erection of a refreshment pavilion, at an estimated cost of £4,160, be recommended to the Council for acceptance. The Architect is to be directed to prepare detailed plans and drawings of the proposed building, and tenders are to be invited for the erection of the building, and application is to be made to the M.H. for sanction to a loan.—Plans passed: Two houses, Morley-road, for Dr. C. F. Fenton; four houses, Wilmington-gardens, and five houses, Salisbury-avenue, for E. Glenny & Son.

BARNSLEY.—The West Riding C.C. are to repair burr and fence walls in the vicinity of the Police Station at Staincross.

BEXHILL.—The T.C. passed plans: House, South-cliff, by J. E. Maynard, for R. H. Brittain; pair of semi-detached houses, Woodville-road, by J. E. Maynard, for F. J. Harris; house, Plemont-gardens, for T. J. Chalk; pair of semi-detached cottages, Turkey-road, by J. H. Lye, for J. Wood & R. A. Larkin house and garage, Dalmeny-road, by Bruce & Co., for Major A. C. Ticehurst; house, Cranston-avenue, for A. Curran; bungalow, Peartree-lane, for A. Bertodo.

BEXLEY.—Plans have been passed by the U.D.C.: bungalow, Upton-road, for P. W. Grose, submitted by F. J. Buckingham; house, Bellegrove-road, for W. Norman; two houses, Springfield-road, for E. J. Webb; bungalow, Arbuthnot-lane, for C. R. Hicks, submitted by L. Sitch; house, May Place-road, for E. L. Povey; house, Upton-road, for J. R. Warren, submitted by E. T. Hopping; bungalow, Arbuthnot-lane, for Mrs. Stamp, submitted by G. W. Lucas & Sons; two houses, Royal Oak-road, for E. Saunders, submitted by E. T. Hopping; 12 houses, Hansol-road, for S. J. Wright.

BOLTON.—It is proposed to remodel and enlarge the Masonic Hall in Institute-street. Plans are in course of preparation by Messrs. Ormrod, Pomeroy & Foy, and Stafford Haslam, architects, Acresfield.— Bolton Infirmary Committee have decided to authorise the Building Sub-Committee to instruct the architects to prepare specifications and obtain estimates for the proposed new Haslam Nursing Home, which is to be erected in the grounds of the Infirmary behind the Thorley New-road property.

BOURNEMOUTH.—Application is to be made to the M.H. for sanction to borrow the sum of £3,700 for the erection of a bowling and tennis pavilion at Meyrick Park.—Application is also to be made for sanction to borrow the sum of £2,600 for the purpose of the erection of a bowling pavilion at Woodland-avenue.

BRADFORD.—The Eccleshill Parochial Church Council are proposing to carry out a scheme of additions to Eccleshill Church school by the erection of a two-story building. The architect is Thos. W. Dixon, 300, Bowling Old-lane, West Bowling.

BRECONSHIRE.—The Breconshire E.C. have received the B.E.'s approval to the building programme for 1927–28. The estimated expenditure of the first year's programme amounts to £25,000, the second year £22,000, and the third year £23,000. The site of a new elementary school at Pontneathvaughan has already been purchased, and the B.E. has approved of the preliminary plans. Tenders for this work will be invited, and also the same for the proposed conversion of the old school house at Cefn Coed into a domestic and practical instruction centre. Mr. Harley C. W. Strickland, A.R.I.B.A., the County Architect, has received instructions to submit to the B.E. preliminary plans of proposed alterations to Ystradfellte Council School and Clydach Council mixed school.

CASTLEBAR.—The Mayo C.C. has decided to secure a loan of £2,653 to be expended on repairing the roof of Castlebar and other court-houses.

CHATHAM.—The T.C. has passed the following plans: Extension to Medway Union Hospital for the Medway Guardians; two houses, Maidstone-road, for Miss Larke; two houses at Horsted-avenue, for H. A. Phillips & Son; six houses at Cornwallis-avenue, for H. A. Phillips & Son; two semi-detached villas at Fletcheworth-avenue, for H. P. Hughes; bungalow at Chestnut-avenue, Walderslade, for J. Beattie.

CHERTSEY.—The Surrey C.C. recommend the spending of £51,837 for roads.

CHESHUNT.—The Co-operative Society propose erecting new business premises at Turner's Hill.

CHESTER.—The City Council recommend that approval be given to the erection of 14 houses upon land fronting Devonshire-place in accordance with plans and specifications prepared by the City Surveyor, and application be made to the M.H. for sanction to borrow the necessary monies.—The Council has resolved that the plans prepared by the City Surveyor for office accommodation at 43, Northgate-street, be tentatively approved and submitted to the M.H.—The Council are also proposing to erect a public hall on a portion of the Public Market. The City Surveyor is to report on the proposal as soon as possible.—Plans passed: House, on new road on the east side of Stock's-lane, for J. H. Emerson; lay-out plan of a building site, Hoole-lane, and adjoining Hoole-lane farm, for Miss B. Jones; lay-out plan of building land, Littleton-road adjoining Vicars Cross House, for A. J. Hayton, architect; bungalow, South Way, Throstle's Nest estate, Blacon, for F. Mutlow; house on plot No. 109, Park-road West, for H. V. B. Thorington; four lock-up garages in Chester-street, Saltney, for C. P. Cockrill; house, Sandon-road and Brook-lane, for T. Huffinley.—The Governors of the Chester King's School are proposing to erect sports pavilion and are making application to the B.E. for sanction to borrow £1,197.

CHICHESTER.—The West Sussex E.C. are to erect a new secondary school for boys, at a cost of £15,000.—A new class-room is also to be provided at the Lancastrian Council girls' school, at a cost of £550.

CLEVEDON.—The U.D.C. has agreed to borrow a second instalment of £4,000 for housing purposes.

COBHAM.—The R.D.C. are to invite tenders for the erection of thirty houses on the Portsmouth-road.

COCKFOSTERS.—The existing Parish Room at Cockfosters having been found to be totally inadequate, it has been decided to build a church house.

COVENTRY.—The City Council recommend the following: (1) That a site for an electricity sub-station in Abercorn-road and Maudslay-road be purchased for £500; (2) land be purchased at a cost of about £350 for a new entrance to the electricity generating station at Longford; and (3) that the site of the Foleshill Tramway Depot be purchased for £661 16s. 6d.

CROYDON.—The C.B. has passed the following recommendations regarding the Norwood-grove estate: Plans were submitted by the Borough Engineer, indicating portions of the west wing at the Mansion, comprising morning room, hall, housekeeper's room, kitchen, and certain domestic offices on the ground floor, and eight bedrooms on the first floor to be cleared, and lavatories erected on the site at an estimated cost of £1,200, and various other alterations be carried out at a cost of £1,000. Fencing work is also recommended at a cost of £838.—The E.C. recommend the erection of a school for 400 children on vacant land adjoining the Winterbourne school, and application is to be made to the B.E. for sanction, including the appointment of an architect and quantity surveyor, and for the acceptance of a tender for the work. The scheme is estimated to cost £18,000.—The C.B. has considered the following library schemes: Central library, extensions and alterations, £14,000; Addiscombe-Woodside library, alterations, &c., £2,650; Norbury library, plans and estimates to be submitted; Addiscombe, new library, £10,000; Norbury new library, £11,000; South Croydon, new library, £12,000.—The Council recommend that application be made to the B.E. for sanction to the erection of a school to accommodate approximately 250 junior mixed and infant scholars, and to be authorised to appoint an architect to prepare the necessary plans, and a quantity surveyor, to obtain the necessary approvals to the plans, and tenders for the erection of the school. The Council further recommend that a temporary building, to accommodate approximately 100 children, be erected on the said site at the earliest possible date, in order to meet the immediate needs of the district, at an estimated cost of £2,000.—Plans passed: F. H. Willcocks, 111 houses, Chipstead-avenue, Foxley-road, and Warlingham-road; Bees & Partners, 24 houses, plots 68–9, Ham Farm; S. Springer, 20 houses, Springfield-road; Baldwin & Sons, Ltd., two houses, Waddon-road; N. A. Frost, six garages, Brighton-road; Paish, Tyler & Crump, six houses, 24–30 & 31–33, Greencourt-gardens, house, 2, Greencourt-gardens, 24 houses, Whitethorn-gardens, and eight houses, 1-11 & 4-6, Greencourt-gardens; J. H. Pearson, two houses, Northwood-road, next 138; J. Rodda, five houses, next "The Chestnuts," Lower Addiscombe-road; Rees & Partners, two houses, 16–17, Orchard-avenue; J. Midmer, 18 houses, 2–36, Norbury-rise; Corporation, slipper baths and wash-houses, Windmill-road, adjoining Gloucester public house; S. H. Laver, 42 houses, Lynwood-gardens; H. C. Dangerfield, four houses and garages, Wickham-avenue, at Wickham-road, plots 41-44.

DARLINGTON.—A new industry of considerable magnitude, and likely to employ a large number of local workmen, is to be started. A factory is to be erected on a 58-acre site on the Cockerton Housing Estate, subject to the approval of the M.H.

DARTFORD.—The U.D.C. has approved in principle a proposal for the erection of a two-storied building for public conveniences and slipper baths on the site acquired by the Council in Bank Court.—Plans passed: Four pairs of villas, Bedford-road, for W. J. Bayliss; house, Shepherds-lane, for W. F. Blay, Ltd.; block plan, houses fronting Park-road, for Randall (Contractors), Ltd.; nine pairs of bungalows, Brent-lane, for Williams Agency, Ltd.; 10 bungalows, Brent-lane and Downs-avenue, for Williams Agency, Ltd.; bungalow, Firmin-road, for F. S. Harris.

DONCASTER.—The West Riding Police Court is to be extended, at a cost of £20,000.

EALING.—The T.C. passed the following plans for houses: Six, by F. Allwright, Kerrison-road; two, by W. Atkinson, Manor-way; 16, by Clark & Dunstall, Cowper-road, Hanwell; and one, by A. Ricketts, Church-road, Hanwell.

EAST BARNET.—The U.D.C. passed plans: Two houses in Netherlands-road, for W. S. Jackson; 34 houses in Netherlands-road, for Welch & Hollis.

ENFIELD.—A site has been purchased for the erection of new branch stores by the Co-operative Society at Gordon Hill, Enfield.

FOLKESTONE.—The T.C. has approved the following plans: House, Cobden-road, for L. A. W. Powell, house, Tower-gardens, for P. Hoskins; house, Theresa; road, for C. J. Moore; house, Cliff-road, Seabrook, for E. S. Morgan; house, near the Golf Course, Cliff-road, for Mrs. Aarons.

HAILSHAM.—The R.D.C. has approved the following plans: Pair of houses at Little Tottingworth, Heathfield, for J. Groves; bungalow at Cowbeech, Herstmonceux, for E. Osborn; bungalow at Grovesland-road, Hailsham, for Miss E. F. Denny; 17 houses in Hailsham and Ghyll-roads, Heathfield, for F. G. Collins.

HASLINGDEN.—The U.D.C. has approved plans for the erection of a new weaving building for the Scapa Manufacturing Co., Ltd.

HASTINGS.—The T.C. passed plans: Four houses, Beaufort-road, St. Leonards, J. Harvey, owner, H. M. Jeffery, architect; two bungalows, Halton-crescent, H. Longhurst, owner, J. Hunt, architect; eight houses, Ore Valley, Elphinstone-road, J. B. Ward, owner, H. M. Jeffery, architect; 10 houses, Bexhill-road, A. Radcliffe, owner, H. Ward & Son, architects; house, off Braybrooke-road, F. Burden, owner, J. Hunt, architect.

HOLLINGBOURNE.—The following plans have been approved by the R.D.C.: Bungalow at Weavering-street, Boxley, for Mr. Mitchell; shop, New-road, Harrietsham, for H. J. Miller.—The Housing Committee have considered it desirable to provide more houses, and recommended that efforts be made to secure sites at Sutton Valence, Leeds, Thurnham and Harrietsham, or parishes immediately adjoining, with a view to building about 20 cottages.

HYDE.—The T.C. passed plans: Two houses, Shaw-avenue, Back Bower, Hyde, for J. Arstall & R. Mellor; additional 64 houses, Bennett-street, for the Housing Committee; four houses, Great Norbury-street and Edna-street, for J. Bramall & Sons, Ltd.

KEIGHLEY.—The T.C. passed the following plans: John Laycock, two houses, Oakworth-road; H. Bairstow, warehouse, Lawkholme-lane; M. Clapham, four shops and offices, Lawkholme-lane; L. Whitaker, eight houses, Lawnswood-road; Prince Smith & Son, sports pavilion, Strongclose.

KETTERING.—The U.D.C. has approved the following plans: Mrs. E. L. Barlow, two houses, Blandford-avenue; C. Wicksteed, sewer, Pytchley-road; Phillips & Slow, Ltd., house in Bath-road; R. W. Bird, house in Beatrice-road; Kettering U.D.C., shops and flats in Stamford-road; O. P. Drever & Son, Ltd., house and shop in Linden-avenue; J. Drury, bungalow Burghley-street; A. P. Owen, house, Headlands.

LEWES.—The T.C. passed plans: Five cottages at rear of South-street.

LITTLEBOROUGH.—Funds are being raised by the members of the Primitive Methodist Church to defray the cost of proposed extensions to the Sunday schools.

LIVERPOOL.—The T.C. recommend that an application be made to the M.H. for sanction to the borrowing of the sum of £4,500 for the installation of new heating and hot-water services, &c., at the City Hospital East.

LONDON.—The L.C.C. has sanctioned expenditure as follows for the undermentioned works: Camberwell—the "Camberwell" evening institute, room for head of institute, £146; St. Marylebone—Cosway-street evening institute, room for head of institute, £103; St. Pancras—Parliament Hill County school, fence, £150; Poplar—George Green's school, improvement of dressing accommodation at playing-field, £115; Streatham—Furzedown training college, redecoration, £135; Dulwich—Grove-vale, head teacher's room, £127; Hampstead—Broomsleigh-street, practical workroom, £210; Kensington—Portobello-road, repairs to boundary wall, £324; Lambeth—Addington-street, practical workroom, £188 10s.; Paddington—Amberley-road, alterations to stepped flooring, £219; Shoreditch—Trinity-place, repairs to schoolkeeper's house, £236.

LONDON (ACTON).—The B.C. passed plans: Thos. Garrett & Son, architects, flats, for the United Women's Homes Association, in Gunnersbury-lane; Wm. Atkinson, block plan of 32–42, Allan-way; J. Atherton & Co., house, St. Dunstan's-avenue; G.W. (London) Garden Village Society, 50 houses, Hanger-hill estate.

LONDON (BATTERSEA).—The L.C.C. recommend the borrowing by the B.C. of £3,400 for housing purposes within the Borough.—The B.C. has resolved that application be made to the L.C.C. for sanction to a loan of £11,081 8s. 10d. in respect of the erection of 18 tenements on the Latchmere-road site. Also for a loan of £3,727 7s. 10d. for a sixth block of tenements on the Plough-road site (in lieu of the application for £4,137, made on December 22, 1926). The Housing Committee has recommended also that the Borough Surveyor be authorised to prepare detailed plans and estimate of the cost of enlarging the Christ Church chalet.

LONDON (BERMONDSEY).—The L.C.C. recommend the borrowing by the B.C. of £3,182 for the construction of a river wall.

LONDON (BRIXTON).—The L.C.C. has approved the revised preliminary plans in connection with the provision of a domestic economy centre at Holland-road central school.

LONDON (CITY).—The L.C.C. has approved the purchase by the governors of the City of London College of certain premises for the provision of additional accommodation for the College.

LONDON (HACKNEY).—The L.C.C. recommend the borrowing by the B.C. of an amount not exceeding £200 for housing.

* See also our List of Contracts, Competitions, etc.

LONDON (KENSINGTON).—The L.C.C recommend that the estimate of £451,550, submitted by the Finance Committee in respect of the widening of Kensington High-street, be approved.

LONDON (LEWISHAM).—The L.C.C. recommend that, subject to any necessary consents as to the construction of sewers, the borrowing by the Lewisham B.C. of an amount not exceeding £91,917 for housing purposes within the borough be sanctioned.

LONDON (LIMEHOUSE).—The L.C.C. have made a building grant of £750 to the governors of King Edward VII nautical school in respect of structural alterations necessitated by the removal of the school from the top floor to the ground floor of the premises occupied.

LONDON (PADDINGTON).—The B.C. recommend that the estimate of £6,760 submitted by the Finance Committee be approved for the enlargement of the convenience and the widening of the carriageways at the junction of Edgware and Harrow roads.

LONDON (STEPNEY).—The B.C. has received the report of the Building Works Manager, in which he states that he hopes shortly to be in a position to invite tenders for the steel framework for the pile driving at Milk-yard site, and in this respect the Council has approved a list submitted by the architects of well-known steelwork contractors from whom tenders will be invited, subject to approval of plans.

LONDON (WEST HAM).—The Elementary Education Sub-Committee have considered the work to be dealt with during the year 1927–28, with a view to the preparation of the estimates, and having been informed that the undermentioned amounts had been included in the Borough Treasurer's forecast of expenditure for 1927–28, forwarded to the B.E. in May, 1926, with the three years' programme, they recommended that the Finance Sub-Committee provide for the same in the next year's estimate: Remodelling of one school, £11,333; central heating, one school, £1,750; remodelling latrines, Manor-road and Denmark-street schools, £3,000; division of long class-rooms, two schools, £3,200; new handicraft centre, Three Mills school (capital expenditure, £2,000), loan charges, £133, equipment £245; handicraft classroom, Russell-road, £600. The recommendation was approved.

LONDON (WESTMINSTER).—The City Council recommend that instead of the reconstruction and enlargement of the public sanitary conveniences in Piccadilly-circus being carried out by the London Electric Railway Co., the Council do agree to carry out such reconstruction and enlargement, subject to approval by the Council in due course of the plan showing the proposed reconstruction and enlargement of the conveniences.

LOWESTOFT.—The C.B. recommend that application be made for loans of £2,242 for the purpose of the construction of a sheet-piled concrete wall in front of the Victoria Bathing Chalets, and £1,510 for the purpose of providing thirty-one additional bathing chalets, a central tea room and lavatories at the existing bathing chalets.

MACCLESFIELD.—The R.D.C. has been recommended by the Housing Committee to acquire land in Jack-lane, Woodford, for a housing site.

MANSFIELD.—The T.C. has approved the following plans: Handby & Mann, house, Empire-street; C. H. Hill, house, Paulson's-drive; E. Percival, house, Paulson's-drive; H. Baggaley, four houses, Harlow-avenue; H. James, four houses, Bottle-lane.

MIDDLESBROUGH.—The T.C. has allocated 30 hous es to be built by direct labour, at a cost of £310 each, and 70 to be erected by private builders, at £325 each.

NEW BARNET.—The congregation of St. Augustine's Church, New Barnet, have decided to build a hall on the vacant site, adjoining the Church, in the Plantagenet-road.

NEWCASTLE.—The Watch Committee are to proceed with the scheme for the building of a new police station, &c., in the Pilgrim-street area.—A large commercial motor garage is to be erected at Benton-road by D. Hodgson. The plans are being prepared by Marshall & Tweedy, architects, 54, Grey-street.—Messrs. Hicks & Charlewood, architects, Mosley-street, are preparing plans for the erection of a new parish hall for the members of All Saints' Church, and for the provision of additional accommodation at the Parish Hall at Walker.

NORDEN.—The U.D.C. has recommended a site in Shawfield-lane for the erection of a proposed new Council school.

OLDHAM.—The C.B. are to make application to the M.H. for sanction to borrow £645 for the erection of a lavatory and storeroom at the Glodwick Market ground.

ORMSKIRK.—The West Lancashire R.D.C. has decided to erect 90 houses.

OSSETT.—The West Riding E.C. has approved of the acceptance of tenders amounting to £15,345 13s. 2d. in connection with the carrying out of extensions at Ossett Grammar School.

OSWALDTWISTLE.—The U.D.C. have under consideration a tram and bus waiting-room at the tramway terminus at Moor End. The estimated cost of the site, the demolition of an existing cottage, and the erection of new buildings is £1,150.

PELAW.—The Catholic congregation are to erect a new elementary school, estimated to cost £5,000. The plans are being prepared by Stienlet & Maxwell, architects, 14, Saville-row, Newcastle-on-Tyne.

PONTEFRACT.—The M.H. has approved of a scheme for conversion of old buildings near the Fairground into a maternity and child welfare clinic at an estimated cost of £612.

PORTSMOUTH.—The T.C. passed plans: Wade & Connor, 12 houses, Locarno-road; Dye Bros., 12 houses, Chelmsford-road; C. M. Searley, 32 houses, new-street off Copnor-road; C. C. Coles, 16 houses, Tangier-road; E. Payne, 14 houses, Burrfield-road; R. J. Winnicott, eight houses, Battenburg-avenue; Light Bros., Ltd., house, Burrill-avenue, Cosham; Dye Bros., 12 houses, Chelmsford-road; The Portsmouth Corporation Electricity Supply, sub-station, Crown-street.

RADCLIFFE.—The U.D.C. has decided to proceed with 42 houses on the Outwood-road site.

RAMSGATE.—The T.C. has passed: Six houses' Dane-crescent, for G. Home; 10, proposed new road from Hereson-road to Dumpton Park-drive, for W. J. Austen; and 50, Whitehall-road, for the Southern Railway Co.

RIPLEY.—The Guildford R.D.C. are to erect six houses.

ROCHESTER.—The City Council has passed the following plans: Six pairs of houses, Wilson-avenue, for W. E. R. Randall & Sons; house, Priestfield-avenue, for Mrs. Whitehead; house, Priestfield-avenue, for C. F. Speyer.

ROCHFORD.—The R.D.C. has recommended that application be made to the M.H. for the erection of eight parlour and 16 non-parlour houses in Eastwood parish.—A motion before the R.D.C., of which a fortnight's notice had been given, for application to the M.H. for authority to expend £10,858 in connection with the proposed extension of the male hospital, was submitted and carried.

ROTHERHAM.—The R.D.C. has recommended the following: Erection of 50 houses at Whiston, £24,216; 22 houses at Swallownest, £8,935.—The M.H. has given sanction for the erection of 51 houses at Brampton Bierlow; 18 at Catcliffe.

RUGELEY.—The U.D.C. has decided to erect 18 houses upon the Talbot-street site.

RUISLIP-NORTHWOOD.—In the No. 2 Town-Planning Scheme of the Ruislip-Northwood Urban Council practically the whole of the unbuilt and some of the built-up areas not included in the first scheme are dealt with. A step forward with the scheme was made when Mr. W. D. Lockhart, inspector from the Ministry of Health, conducted an inquiry into the scheme and heard objections.

SHEFFIELD.—Plans have been approved for the erection of three new branch libraries upon sites acquired at Firth Park, Woodseats and Handsworth.

SHIPLEY.—The M.H. has approved of a scheme submitted by the U.D.C. for the erection of an additional 68 houses on the Saltaire estate

SHOREHAM.—The West Sussex E.C. are to provide at the Upper Victoria Council School a new class-room, at a cost of £500.

SHROPSHIRE.—The chairman of the Shropshire Executive of the National Farmers' Union has made the first definite statement that the county will have a sugar beet factory.

SMEATON.—Twenty houses are to be erected upon a site at the junction of the Stubbs Walden and Womersley-roads, for the Hemsworth R.D.C.

SOLIHULL.—The District Council has decided provisionally to accept tenders for the erection of 12 more non-parlour type houses at Shirley to cost £460 each, and eight houses at Knowle to cost £434 each.

SOUTHEND-ON-SEA.—The C.B. has approved the following plans: Three houses, Cheltenham-drive, H. A. Mowle; bungalow, Western-road, W. Robinson; house, Mount-avenue, S. F. Johnson & Co.; house, Dundonald-drive, Bass & Smee; bungalow, Clatterfield-gardens, F. G. Bethley; three shops, London-road, J. Elmer; two houses and two garages, Kenilworth-gardens, A. Bint; bungalow, Acacia-drive, Mrs. J. Cannon; house, St. James-avenue, J. Blaber; house, Woodfield Park-drive, H. Watson; house, Parkanaur-avenue, H. J. Manners; two bungalows, Cumberland-avenue, D. Davies; six garages, rear of 1,030, London-road, R. Rippon; two flats and garage, St. Martyn's-grove, Miss E. M. Cox; shop and house, Lonsdale-road, D. J. Standen; three houses, Gordon-road, Leigh, Twitchett & Co.; four garages, rear of Palmerston-road, F. A. Ramuz; amended plan of block 11, shop and house in lieu of house, Fairfax-drive, W. Carrington; house, Hastings-road, Mrs. K. Braten; two houses, Ennismore-gardens, H. E. Samson; shops, offices and two flats and a block of eight garages at rear, Rectory-grove, A. Robinson; 10 shops, Holly-gardens, Southchurch-road, D. E. Kerridge; house, Westcliff Park-drive, E. Taylor; eight houses and eight garages, Ambleside-drive, S. I. Sprent; house and garage, St. James-close, F. J. Gregory; four houses, Fairfax-drive, E. Taylor; three bungalows and three garages, Thorpe Hall-close, F. W. Goldsworthy; two houses, Crowborough-road, W. L. Carruthers; two houses, Western-road, Mrs. Treadway; three bungalows, Crossfield-road, H. C. French; house and 11 garages, Victoria-avenue, G. Stevens; shop and garage, Fairfax-drive, P. E. Button.

SOUTHWICK.—The West Sussex E.C. are to install electric light at the Council school and house, at a cost of £170.

SPALDING.—The U.D.C. has decided to acquire four acres of land on a local estate for housing purposes.

STALYBRIDGE.—The T.C. have received sanction from the M.H. for borrowing the sums of £12,720 and £14,657 for the provision of 53 houses on the Hague site and works in connection therewith.

STEYNING WEST.—The M.H. has sanctioned a loan of £1,700 to the R.D.C. for the purchase of housing sites in various parts of the district, and also approved the scheme to erect 56 additional Council houses.

STOCKPORT.—Plans are being prepared for a convenience opposite the new tramways offices at the corner of Welling-road North and Bridgefield-street, and for the reconstruction of the convenience at the foot of Pickford's-brow, for the T.C.

STOCKTON HEATH.—The parishioners of St. Thomas' Church are raising funds for the provision of a new Parish Hall.

STOKEFLEMING.—The P.C. are to ask the Kingsbridge R.D.C. to approve the offer by E. H. Ferris to erect 17 houses at Deer Park.

STOKE-ON-TRENT.—The T.C. has approved plans: Two houses, Victoria-road, Tunstall, for Wm. Adams; 26 houses, Wilson-street, Burslem, for G. M. Sambrook; two houses, Leek-road, Milton, for A. Moss; two houses, off Newcastle-lane, Penkhull, for Wainwright & Twigg; eight houses, Stone-road, Hanford, for T. Horwill.

STRETFORD.—The U.D.C. has approved an expenditure of approximately £160 in respect of structural alterations at Longford Hall, and the surveyor has been requested to arrange for the execution of the work.—Plans passed: 12 houses, Reynolds and Morland roads, for T. Hames; 10 houses, Great Stone-road, for W. R. Rochelle; bank, Talbot-road, for Williams Deacon's Bank, Ltd.; warehouse and offices, Talbot-road, for the Crittall Manufacturing Co., Ltd.; warehouses, Trafford Park-road, for the Liverpool Warehousing Co., Ltd.

SURBITON.—The U.D.C. are to erect another 47 houses, to cost £425 each.

THORNABY.—The North Riding C.C. are now to carry out the erection of the proposed new central school, the estimated cost of which is £15,700.

TOTTENHAM.—Plans approved by the D.C. include those for three houses in Lordsmead-road and a shop at the junction of Lordship-lane and the arterial road.—At a recent meeting of the D.C. the Parks Committee were authorised to include £1,222 in their next estimates for renovation works at Bruce Castle.

TOTTINGTON.—The Housing and Town-Planning Committee of the U.D.C. has recommended the Council to invite tenders for the erection of 12 pairs and 24 pairs of houses on the Walshaw site.

TRING.—The U.D.C. has passed plans: Two pairs of cottages, Bunstrux-hill, for E. Smith & Sons; house, Bunstrux-hill, for H. C. Cook.

TRURO.—The M.H. has sanctioned the borrowing by the R.D.C. of £22,000 for housing purposes.

UXBRIDGE.—The U.D.C. has instructed the Surveyor to prepare plans for erection of 18 parlour type houses and 34 non-parlour type on the Rockingham Meadows estate, for submission to the M.H.

WAKEFIELD.—The West Riding C.C. have decided by a large majority in favour of retaining the Registry of Deeds Department at Wakefield, on a site opposite the County Hall in Bond-street.—The West Riding C.C. are to make application to the M.H. for the sanction to the borrowing of £229,421 for various schemes.

WALTON.—The U.D.C. passed plans: House in Dudley-road, for Nightingale & Pryor; house in Dudley-road, for G. E. Rudkin; house in Oatlands-close, for T. W. Moore; pair of cottages in Ellesmere-road, for W. G. Tarrant, Ltd.; house in Byfleet-road, for A. Seth Smith; house in Oatlands-drive, for J. Latham; house in Queen's-road, Hersham, for H. Balcombe; bungalow in Ellesmere-road, for E. C. Charleton.

WEST LANCASHIRE.—The R.D.C. has decided to erect 90 dwellings.

WHISTON.—The Lancashire Elementary Education Sub-Committee has resolved to ask for sanction to a loan of £28,200 to cover the cost of erection and equipment of the proposed new central and infants' school at Whiston.

WHITWOOD.—The West Riding E.C. recommend that a portion of the scheme for the erection of the Mining and Technical Institute at Whitwood be proceeded with at an estimated cost of £40,000.

WIGAN.—The T.C. has approved a scheme prepared by the Borough Engineer for the erection of one hundred houses at Gidlow. The work will probably be carried out by direct labour.

WORCESTER.—The T.C. propose erecting public lavatories in Gheinvelt Park, and urinals with an approach from the street, at a cost of £997.

WORKSOP.—The R.D.C. has decided that the Surveyor and Clerk should prepare a scheme for the provision of further houses in view of the diminution of the subsidy.

WORTHING.—The C.B. has passed plans: Two houses, Grand-avenue, for T. R. Dewell; house and garage, Gaisford-road, for P. Whatley, by E. Nutter; oil depot, Ivy Arch-road, for Shell-Mex, Ltd.; nine lock-up garages on land opposite the south side of Broadwater-green, for Greenyer Bros., by E. Herbert & Sons; house, St. Valerie-road, for F. Sandell & Sons, by A. T. W. Goldsmith; house, Poulter's-lane, for C. C. O. Whiteley, by G. H. Treacher.

YEOVIL.—The Town Council is to embark on a large housing scheme. The scheme is to provide for the erection of 296 houses on the Preston-road, at a cost of approximately £135,000.

FIRE

GLASGOW.—A serious fire has occurred on the Clyde river front in the central area of Glasgow; damage has been estimated between £15,000 and £20,000.

ESTIMATING ON RIGHT LINES

Everyone whose business it is to quote for building work should master the principles upon which estimating is based. These principles are clearly explained and illustrated in

'HOW TO ESTIMATE'

by J. T. REA,

a unique and invaluable work which is not excelled in thoroughness or in scope by any similar book known.

Fourth edition (now ready). 540 pages. Price 15s. net (by post 15s. 9d.). Containing thousands of prices and hundreds of examples of analysis, showing how a builder can make up rates for himself. In view of the difficulty of fixing standard prices under present conditions, the author has included an important series of Adaptation Tables and Percentages corrected to February, 1926), *which show how rates may be adjusted to meet variations at any time.*

Before purchasing any other book on this vitally important subject, you are invited to inspect this—the standard work which is in use by over 30,000 builders.

A COPY WILL BE SENT BY RETURN, AND YOUR REMITTANCE REFUNDED IF THE BOOK DOES NOT SATISFY YOUR REQUIREMENTS.

NEW BUILDINGS IN SCOTLAND

Bonnybridge.—CHURCH.—At a special meeting of the congregation of High Bonnybridge U.F. Church it was decided to erect a more commodious church.

Hamilton.—HOUSING.—The Town Council has approved of three housing schemes providing for the erection of 222 additional dwellings at an estimated cost of £94,000.—The Council has also agreed to borrow £178,000 to meet the cost of completing the final portions of housing schemes at Low Waters, Downie-street, Saffronhall, and Chantinghall. The above expenditure does not include the following schemes still in contemplation involving an outlay of £100,400 ; Newfield, 66 houses ; The Yews, 14 houses : School-street, 112 houses ; and Bent, 44 houses.

Paisley.—COTTAGES.—The Dean of Guild Court has passed plans for the erection of fourteen double cottages at Lanfine-road and of one double villa in Gartmore-road, by Messrs James Y. Keanie, Ltd., builders, Johnstone.

Ayr.—HOUSES.—The Town Council has decided to proceed with the erection of houses at the Woodfield site. The scheme has been approved by the Scottish Board of Health.

Strathblane.—HOUSING.—The Housing Committee of the Western District Committee of Stirling County Council has recommended the erection of four houses of three apartments at Strathblane.

Glasgow.—HOUSES.—Plans for two municipal housing schemes were passed at Glasgow Dean of Guild Court. On a site at Dalree-street, Shettleston, the Corporation propose to erect 112 houses—5 of five apartments, 18 of three apartments, and 91 of four apartments. At Govanhill, on ground in the neighbourhood of Aikenhead-road, 116 houses will be erected consisting of 12 of five apartments, 76 of four apartments, and 28 of three apartments. The total cost of the two schemes is estimated at £100,000. Other linings granted included the following : J. Parker & Co., Smithycroft-road ; Riddrie, to erect three double bungalows ; Riddrie Knowes ; Govan Combination P.C., to erect a nursing home at Merryflats, Govan ; Glasgow Veterinary College, alterations and additions to college buildings at 83, Buccleuch-street ; Glasgow Royal Infirmary, to make additions to buildings in Castle-street, including the provision of a new lecture theatre and casualty wards ; E. Watson & Co., to erect a warehouse and garage in Douglas-street ; Broughton Copper Co., Hydepark-street, to erect warehouse and offices in Elliot-street ; Civil Service Sports Council, to erect a pavilion in show grounds, Danes-drive Scotstoun ; J. A. MacTaggart, 65, Bath-street, to erect ten shops on east side of Aikenhead-road, King's Park ; Clyde Valley Electrical Power Co. to erect a sub-station at King's Park.

East Linton.—HOUSING.—The Eastern District Committee of East Lothian County Council has decided to erect a further twelve houses at East Linton on vacant ground acquired in connection with the extensive road diversion scheme.

Dunfermline.—PAVILION.—The Dean of Guild Court has passed plans for the demolition of existing tea room in Pittencrieff Park, and the erection of a new one on the same site. The work will be carried out for the Carnegie Dunfermline Trustees, and the architect is Mr. John Fraser.

Edinburgh.—UNIVERSITY BUILDINGS.—Edinburgh University has received a gift of £74,000 from the International Education Board of New York, one of the Rockefeller Foundations, as a contribution to the cost of the new Department of Zoology. A sum of £38,000 is for building, £10,000 for equipment, and £26,000 for endowment. The University has now £79,000 in hand for buildings, and the work will be commenced forthwith.

BUILDING TRADE WAGES IN SCOTLAND.*

Aberdeen Town Planning.

The Town-Planning and Industrial Development Committee of Aberdeen Town Council met recently, when a report was submitted upon the recent conference of representatives of local authorities held in Edinburgh and addressed by Sir John Gilmour, Secretary of State for Scotland. It was announced that Mr. G. Topham Forrest (Chief Architect to the London County Council), a native of Aberdeen, had offered to deliver a lecture on Town Planning, with special reference to Aberdeen, some time about the end of February or beginning of March. The offer was accepted and arrangements for the lecture will be proceeded with in due course.

THE BUILDER

JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

L. CXXXII.—No. 4383. FEBRUARY 4, 1927

THE ARCHITECT AND THE BUILDER

N our recent leaders we have tried to analyse the modern outcry against the spoliation of the countryside. We have tried to stem the immediate rush for shelter to protected areas; we have counselled a return to our houses which are the immediate cause of the tragedy ch is threatening to overwhelm us. We have asserted that problem of the ugly house is an architectural one. By this mean that any architect of average ability could effect a t improvement on most of the houses which are springing very day.

To bring the architect into closer contact with the public the builder is the real problem. The truth of the matter is the architect without the builder is powerless, whereas the der without the architect is powerful. That there are mber of difficulties standing in the way is a commonplace nyone who knows anything about the subject, although it ld be truer perhaps to say that the difficulties have arisen ely through misapprehension and ignorance. From our t of view we eliminate any question of lack of taste on the of the public; we prefer to look for the cause of the ugly se in the reasons which keep the public in ignorance of the itect.

We must, for the moment, omit the question of speculative ding for rental purposes. In doing so, we realise that we are ting a form of building which comprises probably the most us offender against the canons of good taste in building. ertheless, there are a number of social conditions which erlie this problem, and in fairness they must be dealt with were to attempt to suggest any other alternative method of iring a decent house under certain well-defined economic social conditions. There still remains sufficient scope n examination of the mass of buildings (built or bought) h has never had the services of an architect. At once we nge upon the domain of the speculative builder, and of the der who is both architect and builder to the order of his ts.

A few weeks ago we overheard the local doctor delicately esting to a speculative builder that as he (the builder) was er spoiling the landscape with his new bungalows he ought nlist an architect to design the remainder for him. The npt reply was that if he were to employ an architect the es could not be sold for the prices he was asking. Here we a definite aspect of the building problem, which is either or untrue. From the purely business point of view it is an ct which ought to have been laid to rest long ago. Nothing ore certain from the trend of events than that a definite g on this question will be imperative during the next year wo.

gain and again we have heard this statement of the builder enged by architects. Quite recently a number of counter- ments have appeared in the press to the effect that archi- ral appearance is no more costly than ugliness. It has definitely stated by architects that, including their own ges, they could still compare favourably with the builder's On the other hand, we have also heard of houses built by culative builder at thirty per cent. less than the estimated e submitted by an architect. Obviously the error lies in aring things which should be contrasted. Building costs elative to quality, and in the particular houses we refer to was no pretence that the quality of the material and manship were anything but the cheapest and poorest. happened, these houses met the temporary conditions for n they were wanted. We are not defending the "shoddy" ilding; we merely instance the unreliability of statements n have no meaning in terms of comparative values.

s the matter stands, the public has no definite information ork upon. It has never been thought worth while to nt a representative committee to decide—given plans, tions and specifications—whether the architect plus the er are more expensive than the builder acting by himself. We have little doubt in our minds that the advantage invariably is with the architect, and we ask our readers to excuse a discussion on this mercenary issue. Too often has this matter been glossed over. It is the complaint of the architect that the builder preaches the fiction that the services of an architect are both unnecessary and expensive. The ineffective reply from the architect is to accuse an erring public of lack of taste. In begging the question the architect, to some extent, lends colour to the fiction which is responsible for so much ugliness.

There is no doubt that the builder has the ear of the public. In making his appeal on the question of cost—as opposed to quality—he diagnoses psychologically the vulnerable spot. On the other hand, the architect maintains that it stands to reason the builder will make a larger profit when he builds without competition or supervision. To put it otherwise, the advent of the architect may—and often does—mean the substitution of another builder for the local builder. Here we have a domestic tragedy, and arising out of it the usual misrepresentations and bad feeling. The belief that the builder can get more work by himself than through an architect is a fundamental economic error. Where only a certain number of buildings are required, one builder can only build more where another builds less. The architect undoubtedly intensifies the competition, and where this means reduced profits, the architect's unpopularity is assured. On this aspect of the question there is room for a decided improvement in the relations existing between the architect and the builder.

There is some excuse for the difficulty (or ignorance, as some people prefer to term it) confronting the public. Every architect who professes an affection for craftsmanship of any kind must have some difficulty in explaining his own position in relation to the local builder—the lineal descendant of the building craftsman. It is hard to deny the craftsman's love for his spiky finials and crinkled bargeboards. His deterioration is accounted for by a number of things for which we have not space here to discuss. Nevertheless, in an age which does not accept the chimney-sweep, the plumber or the shoemaker without the adjective "practical," the builder begins with an advantage over the architect.

Mr. Arnold Bennett, in the "Author's Craft," has some interesting things to say concerning the artist who demands appreciation from the public on his own terms, and on none but his own terms. If we apply the test to architecture, we find a stage when the architect and the public part company. We are prepared to concede that in architecture, as in other things, the average man is only using plain common sense in desiring sound value for his money. Unfortunately, he expects both quantity and quality, and the builder contrives to supply the impossible. As we write we have the assurance of a number of architects that they were compelled to refuse to have anything to do with the modern cheap bungalow. At the price the public seemed inclined to pay, nothing could be expected but a "shoddy" article and trouble. For this unfortunate state of affairs an appeal to reason is futile. Our immediate concern is with the man desiring value for his money in building, who is completely ignorant of what value in building means. To him the architect can make a direct and confident appeal.

We will conclude with another point of view. We read the other day that in the sale of a £1,000 house the agent gets a commission of £32 10s., the solicitor a commission of £20, and the Government in stamp duties £10. We have no idea how many times a house is sold in an average lifetime, but at "£62 toll per £1,000" (so the caption ran) we can arrive at a considerable total. The significant point which must strike every sensible person is the absurdity of believing the fiction that an architect's fee can be a burden on suffering humanity. To grudge an initial fee to secure a decent house designed by an architect is folly; to grudge writing off a small charge (we have expressed our doubt whether it is an extra charge) for a lifetime's pleasure for one's neighbours is both folly and selfishness.

NOTES

Advice to Students. We hope the very able address which was delivered at the R.I.B.A. on Monday by Professor A. Hubert Worthington, A.R.I.B.A., will be read by all architects, young and old, who were not present at the meeting. The lecturer had something to say and he said it in a way which indicated not only a knowledge of the trials and difficulties which beset the architect in the course of his career, but a knowledge of human nature as well. The address was full of good counsel, and, in view of the advice which is sometimes given to students, it was particularly pleasing to hear his remarks on Modernism: "They should never throw over the wise old common-sense traditions which had arrived at the best way of putting stones and bricks and slates and wood together, unless they were sure they had something better. The chief trouble with much so-called 'Modernism' was a self-conscious and morbid attempt to be 'clever' at any cost. . . . They wanted 'Unity in essentials, Liberty in non-essentials.'" The lecturer was encouraging without being disregardful of the tribulations that attend the architect, rich in reminiscence and anecdote, and overflowing with that sense of humour without which, as he truly remarked, an architect's life is an impossible one. As Mr. Cholmeley afterwards put it, a sense of humour is only in reality a sense of proportion, and no architect should ever be without the latter qualification. It is difficul to say whether Professor Worthington's address was appreciated more by the students or by those "forty years on" as the lecturer put it.

Our Leader. Under our form of civilisation architecture, like many other things, suffers from a disease which might be termed a confusion between quality and quantity. No psychologist can explain in terms of anything what value for money means. To some people it is represented as bulk or quantity; to others, it is quality. They refuse—quite rightly—to be dictated to on these matters; they prefer to learn by experience. It is not for us to say whether a man should rent or build a house, if we are ignorant of his particular circumstances. The point we have submitted in our Leader is that he may want value for his money in building himself a house, and in ignorance he may set about it the wrong way.

Architect and Builder. We should like to see the architect and builder brought into closer contact. Instead of working together happily, we find many builders working with an architect only when the association is unavoidable. To put it otherwise, the architect must give his work to a builder; but the builder need not give his work to an architect. As a result, we cannot think there is any question but that the client and the community suffer. The present outcry against the spoliation of the countryside is the direct proof of the unfortunate relationship in the craftsmanship of building.

The Builder. If—as it has been argued—the architect is responsible for lower profits to the builder, we can understand that a builder may not be predisposed to go out of his way to advise his client to employ an architect. To risk the loss of a contract on his own conditions, for the chance of winning it in competition on another man's conditions, is to display a degree of altruism which is given to few mortals. It should be unnecessary for us to discuss further what is simply a domestic problem. For the sake of everyone interested in architecture and the amenities, we hope that architects and builders will arrive at a hap understanding on this question.

Professor Laurie's Letter. Calling attention in letter to the *Times* to freshness and brilliancy the pictures by the e painters shown in the exhibition Flemish Art at the Royal Acade Professor Laurie raises the question what the methods were which enab them to get such permanent resu Whether the combining of the techniques, tempera and oil, accounts this is difficult of proof. That oil met used alone accounts for a certain dark ing of the colour has to be admitted, whether the method of Van Eyck, wh combined both techniques, will expl the permanent brilliancy we see to preserved is another question. The met of glazing colour over the monochro picture gives brilliancy to the col from its being applied pure over dry surface, and that this was done wo appear to have been often the case. must, however, be borne in mind t the treatment, the scope, of what presented in earlier times, was limited its field, and a simpler approach work within a more enclosed field of vis accentuated particular directions. T more elementary technique was surpas by later artists, including a wider field vision of the resources of painting, which new interpretations revealed the selves. Nor must we be led to beli that the field embraced by the ear painters is to be compared with th later developments, though so beauti within their own limits.

Preservation of Old Cottages. The proposed fund to invested and administe as a Trust by the Ro Society of Arts to prese ancient cottages should not lead us forget that there is need for owners property of this kind to be remin

Cottages at Sutterton, Lincs.

etail of Half-Timbered Cottage near Manchester.

eir own responsibilities in regard to . We think of a village in the vold district, and there are others, ottages of which are much neglected eir owners, no proper repairs being to them: the stone chimney ced with a machine brick one, the y window not repaired or reproduced, replaced with the cheapest kind able. In the report in a contemporary e work of the Council for the Preser- n of Rural England, the writer s of the importance of keeping arge a population as possible con- lly on the soil," but it is not men- l that so many of these cottages ken over by purchase or otherwise he purpose of letting to visitors, g the local worker. The southern ies are full of such examples. These es let for profit by people having al ties or interests, and often not in them themselves, have increased fficulty of "keeping the population ntedly on the soil," their cottages eing taken away from them, and it ortant, in addition to preserving the es, to preserve the local inhabitants m.

Our Garden Amenities. We shall be paying dearly for our increased money-making facilities if the charms of our London s and gardens are to disappear consequence. There could hardly agined a more delightful picture, in winter or summer, than the grounds of Lincoln's Inn Fields, from the point of view of the artist sociologist. Our eyes are often ned by the pictures created from autiful groups of plane trees and ight green lawns seen through the g phases of a London atmosphere, the pleasant seats and happy which the public enjoy add largely to the value which Londoners have obtained through the purchase of the rights for these enjoyments.

The Foundling Site. If the London County Council has the power to protect the amenities of London, we may feel encouraged to hope for the safety of the Foundling Hospital site from the remarks of Mr. Swann at the County Council meeting recently. He said the Town. Planning Committee regard the preservation of the space as a matter of public importance.

The Ideal City. It is assuredly an easy problem for those on whose guidance and policy the future of London depends to meet in a fair spirit the demands created by modern enterprise and progress without endangering the fine heritage of charm which belongs to London. This great city is not to be regarded as a mere mill for grinding out dollars; it has to be remembered as the focal point of a vast empire, and even its commercial prosperity is bound up with its attractiveness as a fine and beautiful city.

Picture Values. Notwithstanding the great numbers of pictures sent every year to the Royal Academy, there are enough left over to supply an almost bewildering number of small exhibitions, few of which, to tell the truth, quite justify themselves. It is a pleasure when we meet with pictures and drawings that have the spontaneity and care shown in those of Holland and other parts, at the Grieves Gallery, by Percy des C. Ballance. This artist looks at the world in its poetic aspect, and is no mere recorder of facts. His colour values are also excellent, as seen in the grey tone of "A Rainy Day on the Maas," or the golden effect of "Moonrise in Holland."

The Last of Wembley. The dismantling and sale of material at Wembley is proceeding rapidly, and there is always something a little sad about the scrapping of a great exhibition. In the course of a few years it epitomises in miniature the birth, life, and decay of a real city; very soon the great Wembley Exhibition will—like Carthage and Troy—be little more than a memory. It is amusing to note the worthy but unromantic uses to which the pavilions are being put—Ceylon is a coach-building factory in London; the Malay Federated States and the West Indies are also factories; Palestine houses a laundry in Glasgow, and Sierra Leone has bloomed again as a restaurant at Tramore in the South of Ireland. The lake is to be filled in, apparently to form the site of a housing scheme. We have so many sites for housing schemes, and so few lakes, that it seems a pity to go to the expense of filling in this ornamental water that might, one would have thought, be better employed as a boating lake in a recreation ground.

Signs. A recent law case referred to in our Notes for Jan. 21 concerned the rights of a second floor tenant to put up an illuminated advertisement, 20 ft. in length and projecting 4 ft. 8 in. from the wall, in spite of a covenant wherein it was agreed "not to allow any placard, poster, or advertisement whatsoever (other than plates or other similar announcement) unless previously approved." The plaintiffs were the tenants of a shop on the ground floor. The Court found that although the sign "caused neither damage nor annoyance to the plaintiffs," yet it "with great reluctance held that in law the plaintiffs were entitled to an injunction." The word "annoyance" has, of course, a different significance in law (since the law takes no notice of such abstractions as beauty and good taste), but in ordinary parlance it would be absurd to say that a hideous sign on the second floor could cause no annoyance to anyone of good taste on the ground floor. The fact that the law did right and granted the injunction was due to a legal technicality not in the least degree connected with the real issue, which is one of good taste.

Clopton Bridge, Stratford-on-Avon, which has now been saved

GENERAL NEWS

Professional Announcement.

Mr. Claude D. J. Benton, M.R.San.I., of Ilford, has been appointed Town Planning Assistant to Mr. Farnham, M.Inst.C.E., F.S.I., Engineer and Surveyor, Sidcup Urban District Council.

A Complimentary Dinner.

A complimentary dinner to Mr. H. W. Wills, F.R.I.B.A., is being arranged and will be held towards the end of the present month. The arrangements are being made by Mr. A. W. S. Cross, F.R.I.B.A., and Mr. H. J. Leaning, F.S.I., who will be glad to hear from any members of the profession wishing to attend.

Lichfield Cathedral Fabric.

It is understood that the architect to Lichfield Cathedral, Sir Charles A. Nicholson, a few months ago made a thorough examination of the building, and has reported that restoration work on the west side of the south transept is absolutely necessary and must be undertaken without delay. This work will entail the renewal of a considerable number of the stones under the parapet.

Safety of St. Paul's.

At the recent dinner of the Horners' Company at the Mansion House, Dr. Inge said that he hoped they would not take too seriously certain attempts to raise a scare about the safety of St. Paul's Cathedral. He wanted to assure the public that the Cathedral authorities had secured the very best advice obtainable, and, so far as they could tell, the work was progressing satisfactorily. He thought they might rest assured that within a few years the building would be safer and stronger than it had been ever since it was built.

Ancient Cottages in London.

Mr. Harold Griffin, president of the Property Owners' Protection Association, speaking at a meeting of the Association at the Memorial Hall, Farringdon-street, said that if there was any unanimity in the Cabinet, surely the Minister of Health would not have old cottages at Peckham destroyed, now that the Prime Minister had pleaded so eloquently for the preservation of ancient cottage architecture. The Ministry of Health had a clearance scheme for certain areas at Peckham, and among the property involved were cottages in Blue Anchor-lane, which was an ancient village street. There was even more need, he added, for preservation in London, because the cottages were much rarer.

The Faraday Medal.

The Council of the Institution of Electrical Engineers have made the sixth award of the Faraday Medal to Professor Elihu Thomson, of Boston, U.S.A., Honorary Member of the Institution, who is well known as one of the pioneers in the development of electrical engineering. The Faraday Medal is awarded by the Council of the Institution not more frequently than once a year, either for notable scientific or industrial achievement in electrical engineering or for conspicuous service rendered to the advancement of electrical science without restriction as regards nationality, country of residence, or membership of the Institution.

Richmond Hill.

Surrey County Council, at a recent meeting at Kingston, decided to make a contribution of £500 (or a sum equal to that of the Richmond Council, whichever should be the less) towards the purchase of the Orleans riverside estate at Twickenham, which is such a prominent feature in the view from Richmond Hill, and which practically completes the purchase price demanded for the property. The land will be acquired by the Twickenham Borough Council and will be thrown open to the public, forming a continuation of the existing riverside walk from Richmond towards Twickenham.

Preserving Ancient Cottages.

In a letter to *The Times* on this subject, Mr. C. Adeane points out that the Cambridgeshire Rural Community Council has a rural planning sub-committee which, among other activities, is scheduling the cottages and other buildings of special historic or æsthetic interest in the county. The sub-committee consists of architects, county and rural district councillors, members of the Society for the Preservation of Ancient Buildings, and others, and is eminently fitted to give expert advice in regard to the problem in Cambridgeshire. He emphasises the point that, rather than set up separate county organisations, the Royal Society of Arts might work through rural community councils wherever they are in existence and are prepared to take the matter up.

Stratford-on-Avon Memorial Theatre, before destruction by fire.

Housing Deficit in Liverpool.

The Liverpool Housing Committee, says *Times*, is faced with a rather serious fina position as a result of the past year's exte building and letting under the Wheatley After 12 months' working under the Govern subsidy of £9 and the Corporation subsid £4 10s. per house, these two amounts plu rents have left a deficit roughly estimate about £50,000. The financial prospect now to next October, when the Govern subsidy is to be reduced by 30s. per house, anything, more grave. A deficiency as hig £100,000 may be reached next year, and committee's difficulty is to find ways and m of meeting the liability. At present, it is st there is no apparent way out except by inc ing the rents. These are already higher many of the tenants can afford to pay, as sh by the general eagerness to sublet.

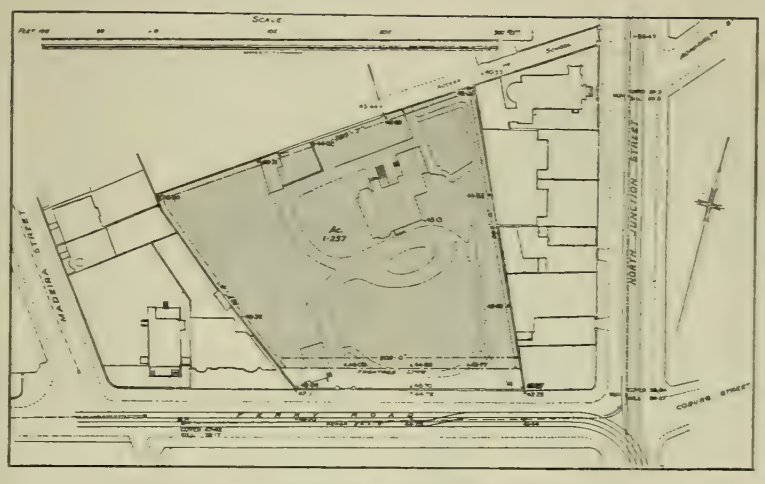
Dickens's Houses and Streets.

The houses and streets which Di immortalised were described by Mrs. I Cameron in a lecture delivered recently t members of the Glasgow Dickens Society. Dickens, she said, a house was never a collection of builders' materials. It was s thing informed with a spirit as surely as a was informed by its soul. Dickens was sitively aware of the spirit of a house, an a few vivid graphic words he was abl convey to his readers his own impression. call a small cottage with a tiny garden in of it "a pert little place" conveyed at exactly the nature of the house. They had their suspicions about its inhabit Dickens gravely assured them in one of "Sketches by Boz" that he could tell a m character from his door knocker.

The Design of Theatres.

The rapid progress made in the planning construction of theatres was remarked by Mr. T. R. Milburn, F.R.I.B.A., of Su land, in the course of a recent lecture t Glasgow Institute of Architects. The lec said the architect had many difficulties to tend with, particularly in the selection of a and also by the fact that theatre propri allowed a very short time for their buildin be erected. In designing a theatre, the arch had to see that there would be no draw that the heating and ventilation were uni that the fire appliances were adequate, he had also to consider the equipment o auditorium and staging. In recent year pointed out, the counter-weighting of sc had come very much to the fore, and this obviated the necessity of "flies," and en the scenery to be operated by hand from stage level. Mr. Milburn referred at leng the lavishness in design of the American thea and mentioned that, in New York, theatres being erected at the rate of one per week

Roman Frescoes in Kent.



The discovery of a Roman villa at Ot Kent, is attracting the interest of local arc logists, says the *Times*. The site of the fi about 200 yards south of the Pilgrims' and forms part of a chicken run belongin Mr. A. Johnston. It was discovered Mr. Johnston was digging a hole for the pu of planting a tree. About 12 in. below surface he came upon a pavement made of large red tiles. Upon removing som these and digging deeper he found a hole, this contained many large flints and a The sides of the hole disclosed rough walli chalk blocks and flints. Digging at adj spots more rough walls were found, of v insufficient portions are shown at preser make their line obvious. About 4 ft. or from the surface he turned out a medle Roman remains. Among the articles ar tiles, parts of roof tiles, small cubical bl no doubt used for making ornamental ments or floors, portions of pots and vas red, grey, and black pottery, and 65 fragm of fresco ornamented in many bright co One piece has a figure, and another an in tion. If the site can be excavated the disc should prove interesting, particularly fo frescoes.

Site Plan: Leith Town Hall Competition.

ment. Importance will be attached to simple and convenient planning, and the arrangements for rapidly clearing the halls. The choice of materials to be used for the building will be left in the discretion of the competitors, except where subject to any provisions contained in these conditions, and all exterior walls shall be of stone, facing brick, faience, artificial stone or any combination of these. The designs of each competitor must be sent in, carriage paid, at latest by noon on April 30, addressed to the Town Clerk, City Chambers, Edinburgh.

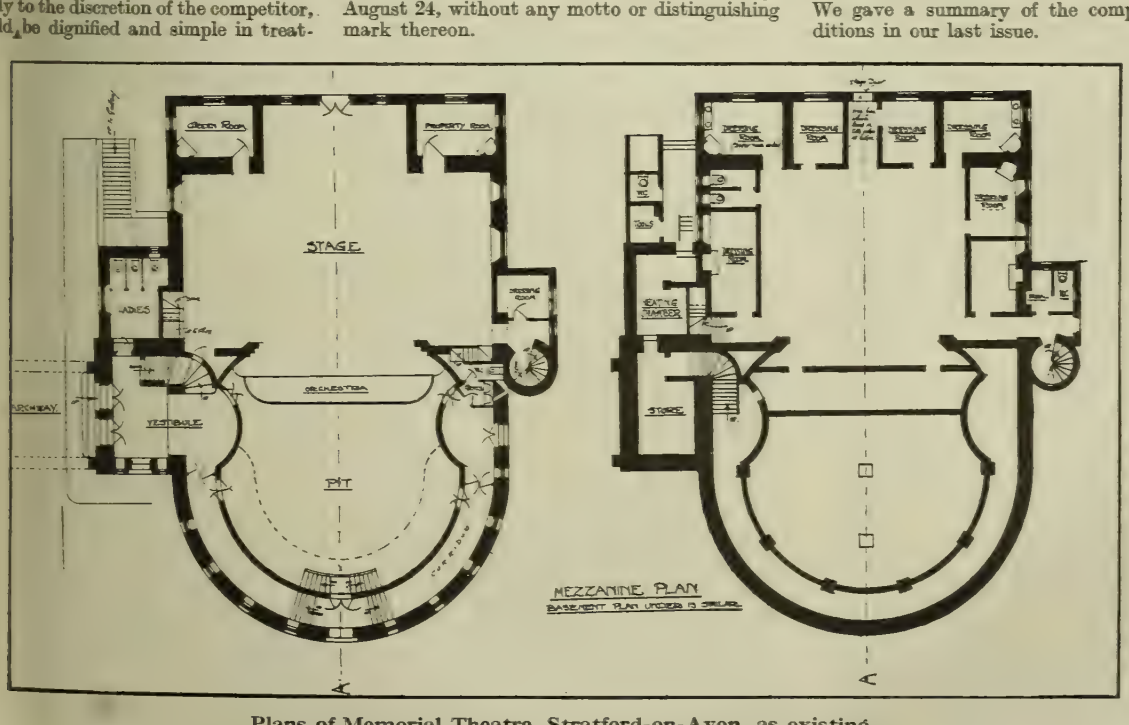
University of Western Australia.

This competition is open to architects who are British subjects or citizens of the United States of America. The site is at Crawley, about three miles to the south-west of the City of Perth. The area of the site is about 160 acres. The total sum available for the buildings which form the subject of this competition is £150,000. In brief the accommodation to be provided for is as follows:—(*a*) A Great Hall, (*b*) a Registry, (*c*) a Union building. The following will act as a jury of adjudicators:—Leslie Wilkinson, F.R.I.B.A. (Professor of Architecture, University of Sydney); the President (1926) of the Royal Institute of Architects of Western Australia (Mr. A. R. L. Wright, L.R.I.B.A.); a member of the Senate, University of Western Australia. Three premiums will be awarded by the adjudicators, viz., £300, £200 and £100. Designs to be delivered to the Clerk of Senate, University of W.A., Perth, Western Australia, at or before noon on Wednesday, August 24, without any motto or distinguishing mark thereon.

Swimming Tank, Dun Laoghaire.

The Urban District Council invite applications from qualified architects to design and supervise the construction of a proposed large swimming tank, on the western side of the present Dun Laoghaire bathing establishment, including the preparation of the estimate of cost, drawings and specifications, obtaining tenders, advising thereon and on preparation of contracts, and all other matters connected with the carrying out of the work. Applications, stating qualifications and experience should be sent to the office of Mr. James J. Triston, Acting Town Clerk, Town Hall, Dun Laoghaire, co. Dublin, addressed to the Chairman of the Council, and marked "Architect," before noon on February 15.

Modern Furniture Designs Competition.



The following awards in the preliminary part of this competition, promoted by *The Furnishing Trades Organiser*, have been made by the assessor:—

Section A (Designs for the Complete Furniture for a Double Bedroom): Mr. Thomas S. Tait, F.R.I.B.A., 25 guineas; Mr. L. Scott-Cooper, 25 guineas; Mr. Albert Stayner, 25 guineas; Mr. Joseph Emberton, A.R.I.B.A., 25 guineas.

Section D (Designs for the Complete Furniture for a Dining-room): Mr. A. Leslie Osborne, 25 guineas; Mr. L. Scott-Cooper, 25 guineas.

Memorial Theatre, Stratford-on-Avon.

We illustrate this week the site plan for this competition, together with plans of the old theatre, as it was before destruction by fire. We gave a summary of the competition conditions in our last issue.

Plans of Memorial Theatre, Stratford-on-Avon, as existing.

ADDRESS TO STUDENTS.

THE President, Mr. E. Guy Dawber, was in the chair at the Royal Institute on Monday last, when the annual Address to Students was given by Professor Hubert Worthington, preparatory to the presentation by the President of the Medals and Prizes awarded by the Council for 1927. Amongst the guests of Council were Professor E. A. Gardner, Litt.D.; Mr. J. W. Mackail, M.A., LL.D., Hon. A.R.I.B.A.; Sir W. Goscombe John, R.A., Hon. A.R.I.B.A.; M. Tournaire, President of the Société Centrale des Architectes Français; Mr. R. F. Cholmeley, President of the Headmasters' Association; and Right Rev. Charles Gore, M.A., D.D.

After some brief introductory remarks, PROFESSOR WORTHINGTON said that his chief claim to speak to them was that he combined with the cares of practice an unusual teaching job. He conducted an architectural mission to painters, sculptors and craftsmen of all kinds, so his days were spent with very lively students of the allied arts except for a convert or two and men of the building trade, a delightful if strenuous combination. So this gave him a kind of detachment, a bird's-eye view, as it were, of architectural education in the regular schools. What was an architect? Their painter and sculptor friends, given the creative fire and a reasonable amount of study, could prove their genius to the world. But unless the young architect had an "uncle" or an "aunt" to give him a job, how could he show his talent? Paper counted for nothing. And when the young architect began he was expected to combine artistic genius with technical ability, creative impulse with conscientious drudgery, temperament with control. He must satisfy the man in the street by his constructive power, his human understanding, his convenient planning, his organising efficiency, and he must satisfy the artists with his skill as an imaginative designer. He must combine the spiritual and the material in a degree far greater than in any other calling. Art and business, fire and forbearance, interest and permanence—who was the man who could claim to possess the happy mean between these conflicting elements? In the architect an extreme of any was equally disastrous.

The architect's calling had in it the opportunity to do great imaginative work that was fully equal, in the world of the spirit, with that of any painter or any sculptor—in spite of the drains and calculations and quantity surveyors and sanitary inspectors that dogged his path from the cradle to the grave. Equally with any artist the architect dealt with the ultimate and eternal values. They would know deep joys, as deep as the deep pains that were inseparable from bringing anything new into birth. There was no joy like the joy of creation—seeing the child of your brain grow in stature and in strength and, let it be hoped, in the favour of God if not always in the favour of man (or his wife). And this joy of having made something that gave joy to others as well as yourself, something that, moreover, had performed a useful service as well as given delight, made your life the best life in the world, though not the easiest. Had they the mind of the practical man, the business man, the efficient man, the success-at-any-price man? If so, they would find life very much easier, but they would not necessarily be a success in the artist's sense. But if they were strong on the material side of their most complex calling, they should not take in seven other devils like themselves and fabricate a fortune. They should try to realise their limitations, bring their tame "ghost" into the light, take unto themselves a partner who would supplement their sterling if somewhat humdrum qualities, and give a chance to one of those brilliant young artists with creative fire and genius who were helpless alone, who wanted a nurse or a strong yet sympathetic partner to guide their complex temperament to achievement. When Mammon came in Art went out. More of them were "egg and bacon" men than men of genius and temperament.

And this led to the consideration of success. Soon from the sheltered harbour of their spoon-feeding school, where they lay surrounded by all the security of helpful teachers and an almost incomprehensively comprehensive curriculum, they would have to sail their fragile barque out into the storms of life and experience. They would have to be careful steersmen between the Scylla of temperament and the Charybdis of materialism. They would have to throw overboard all sorts of things that they treasured if they were superficial. They could only afford to keep the big things. The next stage was the office. They should pray for a good one to begin in; it was as important as the school. There they got their standard, the standard which they would all subconsciously absorb for good or evil. They should realise they were useless, that they knew nothing, that they had got to use all the will power that was in them to find their true level after the pleasant flatteries of a successful school career. The other day he got a letter from an architect—"Can you tell me of a good assistant, I'll pay him well. I only make one stipulation, that he hasn't been at —— School; I've had some from there!" So don't, said the speaker, try and tell the boss how to design and how to run the office in the first week, and don't say you "designed" an important building for the "old man" if you only drew out details. Perhaps there would follow five hard years of drudgery and routine, five all-important years, where they learnt the application of that excellent theory that they learned at school. It did not always happen that the prizewinner had an "Uncle" or an "Aunt." They might have one who would entrust them with their first job. However small this was, it was so important that it might almost be called the first floor of their soaring fabric of success. Until they had seen a job through from beginning to end they were no architects. "Better a living dog than a dead lion." They might dream of cathedrals and art galleries, but until they had constructed a garage or a lavatory they must not make too much noise about themselves. He remembered a distinguished old French architect looking over his (the speaker's) shoulder at Girgenti and saying, "I see from your sketch that you are an architect." He answered "Yes." Then the French architect said, "Are you really an architect; I mean, have you constructed buildings?"

Until they had run a job of their own, taken the client's instructions, been patient and considerate with his wife, conducted the job successfully, settled up the accoun dared their critics, they had not begu their executed works should they be by their quality, not their quantity, b those who used them thought of them the architect, and by what their pe brother architects thought of the product.

Though they might have passed examinations in the world, and thou had won all the prizes and travelling ships of their student days, and thou had won all the competitions in Engla made a fortune, and owned a Rolls-Ro and were the best dressed men (or wo the R.I.B.A., and a social success; and their planning might be practical a construction faultless and they never extras, if they had not the soul of a a love of the things of the spirit, they nothing. And again, if their æsthetic itself away like some hothouse exotic glasshouse of an exclusive studio, fea fresh air of the big world—if they w prepared to face the facts of an archite —if they nursed their grievance wit high-brow confederates and failed to a bricks and mortar, still they were as Their life was a hard life of compro control. If their creative impulse wou forth to the world it must be thro channel of a severe and exacting di The idea came in a flash; it was only out to completion by patient slogging work and tact. Anyhow, nothing in was of real value that they obtaine without an effort of their own. Suc an architect, as for any profession hung on a very slender thread. A temper, a structural fault, a pile of possibly someone else's carelessness were dependent upon hundreds of me degrees), and the thread was broken. always illusive, always just out of re always well worth striving for. soaring fabric would have its Storms would beat against it, clie strikes would hold it up, but only g very gradually, could they build up perience on the job. There was n which experience counted for so mu they should never cease to learn. was the best teacher in the world. little he had learned, he had learned from clients, clerks of works, builde they were not mere financiers), workmen, specialists, than in any cl and he numbered them amongst friends.

Architecture was co-operative; it most social, the most human of the unless they were imbued with an ur operate with others they had better something else.

It was an age with an unusual a misunderstanding, mistrust and jealo a lack of mutual confidence betwee and old, teacher and student, client a tect, boss and assistant, partner and They must work in with the builder, and specialist of every kind, and t range of workmen, and in particu brother artists, the sculptors, paint those skilled in metal and in glas could they overcome the most serious that divided so many of them? F must understand each other's difficu try and realise where they differed fr without setting up themselves to lor them. The genuine artist, whatever was the architect's equal, if not hi be he only a working blacksmith. T tect must have qualities of leader were not essential in the sculptor. mand only came easily to the man used to it. They did not expect a Jo Epstein to have the qualities necessar a great cathedral. But how could ar grip without the allied arts, how allied arts have their fullest developm out architecture? Was it not up to t tect to take the lead in any great co movement of the arts? Could they

lient a lead in this? They must not of him, nor must they be afraid of edit to others. They must avoid help." It was not honest nor fair. ould encourage young sculptors, nd craftsmen (a loose word) instead going to the old stock firms. They itects) are as much to blame as It was for them to see that young sculptors had not to spend carving jade rabbits on a marble They must not forget that a uniformity, however competent and could not give that warm, appealing ir work for which the collaboration rother artists was essential. The carver must sense of material—for stone, for ivory—just as they must. It was a nistake to draw bunches of stock and expect someone to carve them

nism" was a word that many of idered synonymous with Bolshevism, must face this controversial topic d the art world into such disastrous And they must look at it from the ic standpoint. The new progressive e age could not be waved away with rd" gesture. They could not sit e old colonels in a club. In religion, and the whole realm of ideas there resistible change going on. They d of what they did not understand, ss they understood it the more they inst it. But there was something could not be suppressed, nor should to suppress it. If it was vital and they should rather try and guide fe channels. It should be guided, They should never throw over the commonsense traditions which had the best way of putting stones and slates and wood together, unless sure they had something better. f trouble with much so-called sm" was a self-conscious and empt to be "clever" at any cost. and darts and cusps and crockets, y and applied orders, were merely ard human accretions that each contributed. They must not cling as effete and outworn, even though eem safe. They wanted "Unity in Liberty in non-essentials." If alled modernism was sensational, ll of æsthetic excitement and "out ired eyes," to use a phrase of Pro- haby's; if it was self-advertising, non-co-operative and un-English; precious, abnormal, ephemeral and chuck it. But if it was logical, har- nd well composed; if it was well d well constructed and co-operative sh; if it was sane, masculine and and human, and endued with the the eternal, have it.

hould beware of becoming over- Cynicism, sourness, and soul-destroy- sy were common faults among had been said that actors were bad actors, painters bad judges of Were architects bad judges of archi- e could have too near a view; it was ult to get a correct focus, and pro- aining tended to be narrowing. It difficult to be magnanimous, but y were not, they should try not to brother architect before a layman. another common fault among them about the R.I.B.A. If they never g to contribute to its working was lo this? They should all try and g to serve their profession at some er during their career. There were ent ways of doing this. And they should also try and add something to the accumulated scholarship of their calling. It was not enough to have a thirst for knowledge; they should also try and let others share in the result. No award was made in the Essay Competition this year. It was not a good sign.

It sounded rather crude to say "Never take a trade commission." Hush! But people did, and throve on them. Business clients assumed you did so, sometimes. Never forget that if you ever fell in this respect you had lost caste, even though you were a sidesman. Competition morality was one of the proudest boasts of their profession. Their standard had been very high, and it was recognised abroad. But all these things needed jealously guarding. "If you ever are an assessor, don't abuse a position of great trust and honour," said the speaker. "If you are an unsuccessful competitor, play the game and don't write to the papers; write to the R.I.B.A. if you like, but don't wash dirty professional linen in public."

In conclusion, they must forgive him if he seemed to have been discouraging at times. But he had tried to put himself into the frame of mind that he was in when he passed his Final. Shocks followed—healthy and rousing ones. Theirs was a job they must take seriously. There was no room for "passengers" in their overcrowded profession.

Discussion.

Bishop Gore, called upon by the President to move a vote of thanks to Professor Worthington, said that in his opinion the point of the address lay in the fact that an architect, to be worth his salt, needed to be both an idealist and at the same time profoundly practical. As a clergyman, he had suffered at the hands of architects. He could call to mind an altar step so narrrow that he was in constant peril of tumbling backwards. Architecture, he thought, however, was improving. He had first visited America 30 years ago and thought the architecture deplorable. He went again six years ago and thought the advance enormous. In city after city he saw banks, buildings of all kinds, railway stations, all admirable for their purpose. They were simple in design and harmonious in their relation one to another. In conclusion, dealing with the duties of an architect, he would venture to express the opinion that the use for which a building was intended should come first, to be glorified afterwards by idealism.

Mr. R. F. Cholmeley, in seconding the vote of thanks, said he had not suffered at the hands of architects. With regard to the address, he wished all the heads of the teaching profession had been there to hear. He agreed with the necessity for giving the painter and sculptor a chance. Let them, his hearers, walk through any French public building, and then let them walk through, say, the Board of Trade—or at least as much as they could bear! The difference was patent. He agreed with Professor Worthington on his insistence on being English, and also on the importance of having a sense of humour. Sense of humour was the same as sense of proportion, and no one could deny how necessary the latter was to an architect.

The President put the vote of thanks to the meeting and Professor Worthington replied briefly. The President then presented the Medals and Prizes awarded by the Council for 1927. The list was given in our issue for January 21.

Notes from the Minutes of the Council, January 17

R.I.B.A. Prizes and Studentships.—The Council approved the Annual Award of R.I.B.A. Prizes and Studentships submitted by the Board of Architectural Education.

Rheumatic Heart Disease in Children.—On the recommendation of the Science Standing Committee, the Council passed the following resolution and ordered it to be forwarded to the British Medical Association:—

"The Council of the Royal Institute of British Architects have had their attention called to the Report on Rheumatic Heart Disease in Children by the British Medical Association, and, having regard to the fact that it is in the public interest to eliminate dampness in all dwellings, they note with approval that the Science Committee have appointed a Sub-Committee to investigate and report on this subject."

Exhibitions of Modern Architecture.—On the recommendation of the Exhibition Joint Committee, the Council have approved the arrangements for the first of the Annual Exhibitions of Modern Architecture to be held in the R.I.B.A. Galleries from April 27 to June 3. Full particulars will be published at an early date.

British Architects' Conference, 1927.—A Committee was appointed for the purpose of making and carrying out the arrangements for the Conference of 1927.

The Preservation of Old Bridges.—On the recommendation of the Art Standing Committee, it was decided to support the campaign of the Society for the Protection of Ancient Buildings for the preservation of old bridges by giving publicity in the R.I.B.A. *Journal* to the work which is being carried out by the S.P.A.B. in connection with old bridges by inviting members to supply information regarding such bridges in their locality, and by inviting all recognised schools to encourage their students to measure bridges of architectural or archæological interest.

Conditions of Architectural Practice in Burma.—It was decided, on the recommendation of the Practice Standing Committee, to approach the Secretary of State for India in regard to the conditions of practice for qualified architects in Rangoon.

R.I.B.A. Business Meetings.—On the recommendation of the Practice Standing Committee, it was decided that in future one or more of the business meetings during the session should be devoted to the informal discussion of matters of current professional interest.

Royal Sanitary Institute Congress, 1927.—Mr. H. D. Searles-Wood and Lieut.-Col. P. A. Hopkins have been appointed as Delegates of the R.I.B.A. to the Royal Sanitary Institute Congress, to be held at Hastings from July 11 to 16.

The Royal Sanitary Institute and Sanitary Inspectors' Examination Joint Board.—Mr. H. D. Searles-Wood was again nominated as the representative of the R.I.B.A. on this Board.

Resignations.—The following resignations were accepted: P. J. Warman (A.R.I.B.A.), S. Grabham (A.R.I.B.A.), Alfred B. Black (F.R.I.B.A.), William Charles Clifford Smith (F.R.I.B.A.), E. D. Brown (A.R.I.B.A.), J. J, Cresswell (A.R.I.B.A.), J. Hardman (L.R.I.B.A.). Arthur Loveday (L.R.I.B.A.), F. Howard Mercer (L.R.I.B.A.), James Money (L.R.I.B.A.), F. F. Munro Wilson (L.R.I.B.A.), and B. Gurney-Randall (Subscriber).

Membership.—Nineteen candidates were nominated for the Fellowship, twenty-nine for the Associateship, and one for the Hon. Associateship. The following ex-members were reinstated: As Associates, A. C. Denny and T. Inglis Goldie; as Licentiates, E. W. Hilton and J. G. Reynolds.

Retired Fellowship.—The following members were transferred to the Retired Fellowship:—H. L. G. Hill, elected Associate 1890, Fellow 1926; George W. Webb, elected Associate 1879, Fellow 1890.

Studentship R.I.B.A.—The following Probationers were elected Students:—J. N. Aylwin, Battle, Sussex; A. Bailey, Eltham, S.E.9; L. Bintley, c.o. Architectural Association; A. Bolot, Brisbane; C. E. W. Boreham, Camberwell; P. G. Budgen, Rumney, near Cardiff; J. T. Castle, Roehampton, S.W.15; J. G. Clementson, Bensham, Gateshead-on-Tyne; B. Coghlan, c.o. Westminster Bank, Ltd., 112, Oxford-street, W.1; J. J. Coleman, Sunderland, Co. Durham; P. W. Dawnay, Purley, Surrey; S. J. Docking, Blackpool; A. H. Farmer, Southwick, Sussex; H. C. Farmer, Temple Fortune-lane, N.W.11; I. Forbes, Sheeling, Chalfont St. Giles, Bucks; A. M. Gajjar, Ahmedabad, Bombay Presidency, India; E. J. Harrison, Lancaster; T. C. Haynes, Chester; W. R. Helm, Oldham; D. C. Hodge, Ladbroke-grove, W.10; H. A. Hogarth, Hull; R. T. Kennedy, Northenden, Cheshire; W. H.

Kinnimonth, Edinburgh; O. H. Leicester, Loughton, Essex; E. C. Marriott, Dalston, E.8; T. L. Marshall, Kettering; J. L. Morgan, Bridgend, Glamorgan; C. L. Morris, Chelsea; E. Oakley, Gateshead-on-Tyne; H. T. Parry, Portmadoc, North Wales; J. W. Poltock, Wealdstone, Middlesex; J. E. Potter, Kettering; L. Pugh, Neston, near Birkenhead; D. Roth, Bow, E.3; R. Shaw, Bingley, Yorks; T. F. Thomson, Trowbridge, Wilts; T. E. S. Thwaite, Bridlington; Anne M. O. Trouton, 39, Bedford-square, W.C.1; P. O. G. Wakeham, St. Budeaux, Devonport; N. Willis, Newcastle-on-Tyne; W. G. Wright, Leicester.

Maintenance Scholarships in Architecture.

The Maintenance Scholarships Committee have received from the Liverpool Architectural Society a donation of £35 towards the Maintenance Scholarships Fund.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

The "Ideal Houses Competition."

SIR,—Perhaps you may be able to find room for a few remarks from an unsuccessful competitor in this competition. Discussion should add much to the value of the competition both to participants as well as to all engaged in the construction of a modern house. I make the unit of cost per foot cube in the winning designs to be in the neighbourhood of 1s. 5d. To establish this point is of paramount interest. In my experience very sound work of this kind can be done for rather less in some localities, but if so, it is a very good thing that the owners should realise their good fortune.

There are, however, other points not without interest. I refer to Class A. In the winning design the combined kitchen, scullery and maid's recess, where I find it difficult to find even the 129 sq. ft. indicated, have very scanty accommodation, especially as washing at home was to be provided for. The "maid's recess" seems to have somewhat beguiled the assessors.

Again, the usual axioms of excellence—an east-facing bathroom and internal chimney-stacks—are not complied with. The staircase, also, must be steep or the headroom in the entrance lobby very scanty.

The design placed second is very interesting because a few though important alterations would make it a very good one indeed. Firstly, I would entirely reverse the house so as to get the bathroom on the east side, this also giving the dining-room an east window, whilst the drawing or sitting-room would have an orthodox west aspect. Secondly, room could be easily found for a larder out of offices, and garage (latter 9 ft. wide) in the west wing. Then a direct exit from hall to garden, with additional light and ventilation, would be a great gain. Thirdly, there are external stacks again; I should like the fireplace where the sideboard is shown.

The designs placed third greatly resemble the first but the garage is better placed so that a car can be washed in the yard.

CHARLES PERKS.

Sanitary Institute Congress at Hastings.

At the Congress which will be held by invitation of the Town Council at Hastings, from July 11 to 16, Sir William Joynson-Hicks will preside. Sir Willaim Henry Willcox, C.B., M.D., F.R.C.P., will lecture on "Chronic Rheumatism in its Relation to Industry," while sectional meetings will be held for the reading and discussion of papers relating to—*a*, Sanitary Science and Preventive Medicine; *b*, Engineering and Architecture; *c*, Maternity and Child Welfare, including School Hygiene; *d*, Personal and Domestic Hygiene; *e*, Hygiene of Food; and *f*, Hygiene in Industry. Conferences also will be held for—i, Representatives of Sanitary Authorities; ii, Authorities of Health Resorts; iii, Medical Officers of Health; iv, Engineers and Surveyors; v, Veterinary Inspectors; vi, Sanitary Inspectors; and vii, Health Visitors.

AMERICAN APARTMENT HOUSES—

BY F. E. BENNETT, A.R.I.B.A.

FIG. 18.—TYPICAL PLAN—7 FLATS—6, 6, 3, 3, 4, 4, AND 4 ROOMS.—Corner site, 100 ft. by 107 ft. Sixteen stories. 1060, Park-avenue.

The central stairway gives place to two main stairways—one on each wing, one serving three flats and the other four—with fairly large public hall space. In addition there are two fire towers and two iron stairways, making six

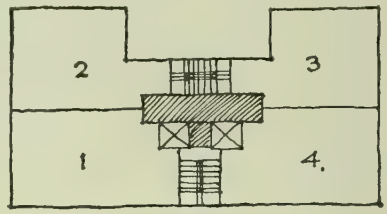


FIG. 17.

stairways in all to provide the two means of exit for each flat. The number of passenger lifts is not increased, but there are now two service lifts also off the public halls. The "foyers" by now have been considerably reduced or eliminated entirely and become just "entries," and there are two flats of two rooms and a kitchen. All, however, are complete living apartments with separate doors to the kitchen and the living room. The two largest flats face out on to Park-avenue, giving them much greater value comparatively over those on the side street. By the arrangement of public halls, the width of these wings becomes wider than before. It should be noticed that in the small flat B there is no fireplace, and the kitchen range is gas-heated.

FIG. 19.—TYPICAL PLAN.—3 FLATS.—12, 10 AND 9 ROOMS.—Corner site, 150 ft. by 100 ft. Sixteen stories. 1120, Fifth-avenue. Mr. J. E. R. Carpenter, architect.

This plan is right up-to-date, the building having been completed only within the last few months. It is conspicuous for its very clean arrangement of compartments and succession of good rectangular shapes. Four lifts have been used, one service lift supplying two kitchens and one passenger lift supplying two hall rooms are nearly all placed with the ends on to outer walls to make the g of the frontage. For aspect bedroom preference and the dining room secondary consideration. The halls ar receive good secondary light from liv Long corridors are avoided and the space is good. A new feature here is t bathroom to the maids' bedrooms, whe narrow compartment with a short tub a entered from each side. It is colloquia as a "hop over," and its desirability co much dispute. It should be not similar the master's bathrooms are, a of standard production. The short building faces on to Fifth-avenue and at the ground level on the right of leads from the pavement to the rear the basement.

FIG. 20.—TYPICAL PLAN—4 FLATS—4 3 ROOMS.—Corner site, 100 ft. Seventeen stories. 33, Fifth-aven

These flats are quite small for a si Fifth-avenue, but at the same time designed. Diagrammatically the p in Fig. 17.

The lifts and stairways are access four of the flats; the public hall an has its "foyer." Each plan has alcove."

Greater Brighton.

A largely-attended meeting of Brig payers approved the proposal of the C to promote in the ensuing session of P a bill for extending the boundari borough, and for other minor purposes the unification of the Poor-law are bill is passed in its present form it Brighton a sea frontage twice as l present frontage. The Brighton front extend from the Hove boundary to S mile beyond Rottingdean. Altogeth 10,000 acres or four times as much as t area of the borough, will be added to

The Astoria Cinema and Dance Hall.

This building, which has just been completed in Charing Cross-road, from the designs of Mr. Edward A. Stone, F.S.I., combines a cinema above ground level and a dance hall below. The entrance to the circle and stalls of the cinema is at the angle of Charing Cross-road and Sutton-street, while in the middle of the façade is a range of shops, beyond which, again, is the entrance to the dance hall. Designed upon Roman lines the Cinema follows the Pompeian style of decoration. From the street an amply proportioned circular hall is approached by five glass doors. The vestibule, 25 ft. wide, has vari-coloured marble columns flanked by gold and white decorations. The theatre provides accommodation for 2,000 persons, all with a clear view of the screen. The proscenium, which is flanked by Doric columns, with a grille on each side concealing the organ, has a richly moulded opening 44 ft. wide, and the stage is of a depth capable of accommodating the most elaborate stage settings. The latest system of concealed lighting has been adopted, and atmospheric lighting will form one of the presentation features. Every seat in the house is of the new "tub" style, giving ample knee and elbow room. The stalls floor is built with a generous rake, and although its width is 90 ft., there is no column or obstruction to interfere with the view of the screen. The same seating mode has been utilised in the circle, which is approached from a foyer, and in which teas and light refreshments are served. Heating and ventilating are on the Plenum system.

As already mentioned, the dance hall is approached by a separate entrance hall in Charing Cross-road, leading to a foyer. From the balcony on this floor level the visitor looks down on the dance hall below, which holding capacity of some 1,000 persons. dance floor is of sprung maple. The ball is reached by two open staircases.

The site of the theatre was formerly pied by a factory, and in designing the th it was found possible to make use of existing brick walls and to reinforce them steel stanchions to avoid heavy loads co on the walls. The main steelwork was hoisted over the top of the walls about 6 above pavement level. This reconstru provides a good example of the economies can be effected by the judicious use of framing. The deep concrete retaining were waterproofed integrally as laid by addition of "Colemanoid" to the gau water, while "Atlas White" Portland ce stucco was used for the exterior elevatio

The general contractors were Messrs. G & Sons, who have carried out the work t complete satisfaction of the architect. following were sub-contractors:—Archi Dawnay & Sons, Ltd., steelwork; Plaste Ltd., external imitation stone renderi Emerson & Morris, external imitation s renderings pre-cast; Fenning & Co., marble; Promarble, Ltd., imitation mar Brookes, Ltd., stairs; Jeffrey, Ltd., hea and ventilating; Sturtevant Engineering vacuum cleaning; Clark & Fenn, decora (cinema); H. The Park-lane Hotel.

The completion of this work, which illustrate this week, marks the successful fi to a project which was begun in 1913, w the steel framework was erected. The front to Piccadilly is about 130 ft. The neces alteration and adaptation of the steelw rendered requisite through the passing decade called for skilled engineering scie Parts of the framework had to be cut and parts substituted, while several main gir which were already placed in position secured to existing steel supports were jected to elaborate alteration. Fire-resis floors and roofs have been erected throug the entire building, while the exterior fac are constructed of fireproof terra-cotta, gl which gives a bright, cleanly exterior to hotel. It also ensures permanence, and vides a surface which does not absorb the and soot inevitable in London. The hotel been designed upon lines of comfort. E bedroom has its own private bathroom, features are the Roman lobby lounge, sev simple in style, the old English breakfast with half-timbered walls, the Louis XIV the ball-room and the French restaurant.

MID-EIGHTEENTH CENTURY BUILDING CONSTRUCTION

WE have received the accompanying illustrations from Mr. Alner W. Hall, F.R.I.B.A., of Messrs. Young & Hall, the architects for the new Middlesex Hospital.

The west wing of the old building is now being pulled down, preparatory to building operations, and in the course of this work very careful examination has been made of the timbers, not only to study their condition, which, incidentally was very bad, but also for the general methods of construction of this type of building, which dates from 1755.

"I think you will agree," writes Mr. Hall, "that the method adopted in joining the principal beams was, to say the least of it, remarkable. The scale drawing which I have had prepared illustrates the general method, in which the timbers were some 14½ in. by 6¼ in. red fir in pairs, with slots 3 ft. long and 4 in. wide and 2 in. deep, cut on the inner faces of the beams. The slots were cut diagonally, as shown, and inserted in between the two slots were 4 in. by 4 in. oak pieces, the whole when placed together being bolted where shown. One can only imagine that the intention was to strengthen the beams, but it would seem that the method was more likely to weaken the beam than anything else, as the cutting of these slots, so close to the top and bottom edges of the beams must have seriously affected their strength. Figure 3 shows the span of a beam, with a string line from end [to end, indicating the tremendous sag, which, in the case of this particular beam, was about 5 in. Figure 1 shows a pair of beams turned outwards, indicating the slots; and Figure 4 shows a different view of a beam before it was taken down, clearly indicating the bolts and also the sag."

Middlesex Hospital: Details of Old Timber Beams across Wards.

Incorporated Church Building Society.

At the meeting of the Incorporated Church Building Society, held at 7, Queen Anne's Gate, Westminster, last week, Mr. Athelstan Riley, F.S.A., in the chair, grants were made towards building new churches at Bitterne Park, The Ascension, £500; Blackpool, St. Stephen, £400; Hapton, St. Margaret, £150; Rishworth, St. John the Divine, £150; Wigan, St. Stephen, £250.

Towards enlarging, reseating or repairing the churches at Battersea, All Saints, £50; Cann; St. Rumbold, £10; Deptford, St. Luke, £30; Hartlepool, St. Barnabas, £15; Ipswich, St. Helen, £25; Monks Risborough, St. Dunstan, £25; Newington, St. Matthew, £75; West Moors, St. Mary, £50; Willington, St. Stephen, £25; Wimbledon, St. Matthew, £200.

The following grants were also paid for works completed at Brant Broughton, St. Helena, £20; Charlbury, St. Mary, £50; Clayhanger, St. Peter, £15; Earlestown, St. John the Baptist, £150; Furzedown, St. Paul, £150; Llanarth, St. Teilo, £30; Merton, St. Swithin, £20; Newport, SS. Julian and Aaron, £225; Sanderstead, St. Mary, £250; York, St. Chad, £250.

In addition to the above the sum of £1,247 was paid towards repairs to thirty-six churches from Trust funds held by the Society.

SOCIETIES AND INSTITUTIONS

YORK AND EAST YORKSHIRE ARCHITECTURAL SOCIETY.

e annual dinner of this Society was held Hull recently, with Major S. Malcolm er, President, in the chair. Amongst those nt were Mr. W. S. Walker, Vice-dent; the Lord Mayor of Hull, Alderman on Boyes; the Rev. Dr. Rigg; Mr. Alfred n; Rev. Arnold Lewis; Messrs. J. vles, H. Andrew, J. R. Ansdell, C. H. ell, W. E. Biscomb, W. B. Blanchard, . Brooks, A. B. Burleigh, Colonel A. on, Councillor Beecroft-Atkinson, Coun- P. Gaskell, Mr. H. E. Gelder, Sir Alfred er, Messrs. G. D. Harbron, D. Harvey, . Horth, H. E. Horth, R. Jackson, C. D. ridge, F. Dyer, J. Rickatson, E. A. rd, J. E. Reid, F. Robson, T. Snowdon, P. Watson, W. B. Wheatley, C. Oliver, . Houldsworth, A. Hick, A. B. B. Jobling, Junns, L. White, E. A. Lawton, L. G. man, B. Ferriby, and J. Ward.

e Rev. Dr. Rigg, Beverley Minster, in osing the civic toast, said he regarded elf as the guardian of one of the most tiful churches in Europe.

e Lord Mayor, Alderman Watson Boyes, eplying, urged architects in designing es to allow for the maximum of sunshine der that the health of the occupants might ft.

r. W. S. Walker (vice-president of the and East Yorks Society), in sub- ng the toast of the Royal Institute of sh Architects, said that at present they engaged in promoting a Registration which they trusted, if they were fortunate e ballot, would pass through both Houses arliament in the coming session. It would ct the public against incompetence and re that none but thoroughly efficient ons would be engaged in the profession of itecture. Architecture could only be pro- l by architects and by those who had been oughly trained to produce them.

r. E. Guy Dawber, P.R.I.B.A., in reply- said municipalities were awakening to the that it was time to take in hand great nes of town planning and for the clear- of slums that had been a disgrace to this ry for so many years. It was gratifying ow that Hull was in the vanguard in movement. The enthusiastic response to the movement for the preservation of England augured well for its future. regard to educational matter, he hoped the authorities of the University College, established in Hull, would see their way abody a School of Architecture.

Ian McAlister, secretary of the B.A., proposed the toast of the "York East Yorkshire Architectural Society," to the President replied, saying that the y's principal aim was to uplift the pro- n of architecture and to ensure a high ard of professional conduct so that they worthily claim the confidence of the

NORTHERN ARCHITECTURAL ASSOCIATION.

President of the Northern Association, -Col. G. Reavell, O.B.E., took the chair annual dinner of the Association, held at s Blackett-street Rooms, Newcastle. gst the guests were Mr. E. Guy Dawber, B.A.; Alderman R. H. Millican, J.P.; . H. E. Galloway, Charles McGhie, T. R. n, Ian MacAlister, T. H. Rae, T. H. . A. M. Oliver, J. S. Earnshaw, A. E. n, H. E. Pitt, E. G. Harvey, J. Douglass ll, R. J. Storey, W. H. Hope, A. K. . R. Burns Dick, W. T. Jones, Geo. H. R. G. Kirkby; Dr. T. H. Blench; Messrs. Hicks, F. M. Dryden, J. E. Shaw, S. Bul- . L. S. Sinclair, P. Clive Newcombe, R. len, R. N. H. MacKellar, W. Milburn, L. W. Taylor, C. Talbot Brown, R. A. ell, P. L. Browne, T. L. Brown, K. Brown, ite, J. Wilson Hays, R. I. Harper, R. H. Walker, Capt. H. T. Wright, Messrs. J. W. Corking; J. E. Stafford, S. F. Bestow, J. C. Maxwell, S. Brinton, P. J. Stienlet, F. A. Child, H. W. Kaye; S. C. Punchard, E. Richardson, J. Gibson, T. H. Turnbull, H. M. Wright, and J. F. H. Checkley, Asst. Hon. Secretary, N.A.A.

"The Royal Institute of British Architects and Allied Societies" was proposed by Mr. H. E. Galloway, who spoke of the very great services rendered and still being rendered the country by architects. They were honoured particularly that night with the presence of the captain of the ship, Mr. E. Guy Dawber, upon whose work in bringing into existence the Council for the Preservation of Rural England, the Newcastle-upon-Tyne Society looked with sympathetic interest and appreciation. The time was not ripe to say more, but there was an indication that the Newcastle Society was keenly interested in very much the same matters as the Council Mr. Guy Dawber had recently established.

In the course of his reply, Mr. E. Guy Dawber remarked that theirs was a great profession which had had a great past, and he was perfectly sure it had a great future of activity and usefulness before it. The profession supplied a human need, and as we all felt to-day that we must get the best out of life, so he believed there was a feeling in the country that we must have the best architecture. He thought there was a feeling at last spreading over the country that we must, as a nation, before it was too late, put a stop to this thoughtless, careless, and ugly building that was spreading like a disease all over the countryside and in our towns and cities. It was gratifying to find that in Newcastle they had a very active civic society. There were a great many of these throughout the country, and he felt that no great city or town should be without a civic society.

Mr. T. R. Milburn responded for the Allied Societies; and Lieut.-Colonel G. Reavell submitted the toast "The Municipal Corporations of the Province." The Deputy Lord Mayor (Alderman B. H. Millican) replied; and Lieut.-Colonel A. K. Tasker then proposed "Our Guests," to which Mr. Charles McGhie (President of the Northern Branch of the Surveyors' Institution) replied.

INCORPORATION OF ARCHITECTS IN SCOTLAND.

The monthly meeting of Council of this body was held last week at 15, Rutland-square, Edinburgh, Mr. G. P. K. Young, F.R.I.B.A., president, in the chair. A presentation was made on behalf of Miss MacGibbon of architectural books and drawings which belonged to the late Dr. David MacGibbon, architect, Edinburgh. A report was submitted as to approaching various public bodies on the subject of the preservation of rural Scotland, preparatory to the formation of a Scottish Council for this purpose. Elections were made of one Fellow, four Associates, and twelve students.

THE FACULTY OF ARCHITECTS AND SURVEYORS.

A general meeting of members of the Faculty was held at the Memorial Hall, London, on Thursday, January 27. Colonel Duncan-Teape (President) was in the chair, and at the outset explained to the members all the Executive Council had done in relation to the proposed Architects' Registration Bill. Mr. A. E. Sockett, Barrister-at-Law, then addressed the meeting at some length on the provisions of the Bill. He pointed out that the Bill had many defects, chief amongst which was that it did not set up a definite Central Registration Authority with proper representation for all professional centres. The experience of medical men in regard to the British Medical Council had been forgotten, and the Bill even went further than medical autocracy and monopoly had done. In this there were dangers not only to unattached practitioners but also to members of the R.I.B.A. What rules of professional conduct, asked the speaker, were the R.I.B.A. going to lay down to regulate a man's right to remain on the Register? The power of removal from the Register was too wide, and there was nothing to prevent the R.I.B.A., constituted by the Bill as the "Little Parliament for Architects," framing rules that no architect could be interested in, or undertake, estate work generally. How many members of the R.I.B.A., said the speaker, were selling land and houses? It seemed to him that in many cases architects could not open up building estates unless they were allowed to do some preliminary work by way of negotiation to sell or buy. If a rule prohibiting such work was framed under the Bill, it seemed to him that all architects without exception would lose part of their means of earning a livelihood. The peculiar position of surveyors under the Bill was explained by the speaker, and he concluded his remarks by stating that at all costs the R.I.B.A. must be prevented from having the power to elect local R.I.B.A. men to function as judges on applications for registration and on the removal of the names of practitioners from the Register. It would not be wise for unattached practitioners to approve provisions allowing the possibility of a right existing in

The Park Lane Hotel, Piccadilly, W.: The Kitchens.

MESSRS. HENRY TANNER, Architects.

the Institute to get local R.I.B.A. men to judge their "professional rivals" practising in the same district. And if the R.I.B.A. was to be given some sort of judicial powers, in addition to a usurpation of Parliamentary authority to legislate rules, there must at any rate be a set of judicial rules which would not allow the R.I.B.A. to erase a practitioner's name from the register without giving him notice of their intention to do so before the act was done, and not after the expulsion had been effected as under the present Bill.

The meeting then approved steps taken by the Executive Council by way of opposition to the Bill, and it was decided to continue opposition unless reasonable amendments were agreed to by the R.I.B.A. in conference with the Faculty. Several members at the meeting expressed the view that the principle of registration was good, but the way in which it was proposed to carry it out was wrong. A resolution (proposed by Mr. Shepherd and seconded by Mr. McEwen Waghorn) was also passed that members of the Faculty be notified not to enrol on the R.I.B.A. voluntary Register, as it meant nothing, and that if any member had enrolled he be asked to write a polite letter to the R.I.B.A. requesting a withdrawal until such time as the Institute allowed the constitution of a real representative Registration Board operating from London only.

Mr. Michaux proposed a vote of thanks to Mr. Sockett for his address, and this was seconded by the President and carried unanimously. Mr. Percy and Mr. Langford Moyle afterwards proposed and seconded a vote of thanks to Colonel Duncan-Teape, and this was carried unanimously.

A meeting of the Executive Council was held on the same day at the Memorial Hall, with Colonel Duncan-Teape (President) in the chair. The appointment of Mr. H. B. Whitfield as Secretary was approved. The Secretary read a letter from Captain Brodrick, the Hon. Secretary of the South-Western Branch, raising the question of election to grades of Fellowship and Associateship. It was decided that the Scrutiny Committee be given instructions to frame proposals on the matter and report to the next meeting of the Council. The Architects' Registration Bill was the subject of a lengthy discussion, and a letter from the R.I.B.A. was read by the Secretary. It was decided to forward to the R.I.B.A. some copies of the criticism of the Bill, and to state that the Faculty was prepared to meet the R.I.B.A. in conference, for the purpose of coming to an agreement on amendments to the Bill and on the constitution of the Registration Board. A Law and Parliamentary Committee was elected, to consist of all the members of the Executive Council, with the addition of Major R. I. Tasker, M.P., F.F.A.S., and Mr. A. E. Sockett, Barrister-at-Law.

THE COLLEGE OF ESTATE MANAGEMENT.

Law of Property Act.

The second of three lectures on the effect of recent legislation on property—this time on the law of vendor and purchaser—was delivered by Mr. Graham Mould, barrister-at-law, at the College of Estate Management, Lincoln's Inn Fields, on January 18. Speaking generally he said the Law of Property Act, 1925, although it was one of the longest and bulkiest Acts of Parliament ever passed, did not make very far-reaching changes as to the law so far as the law came within the province of surveyors and land and estate agents. It made a good deal of difference from the solicitor's point of view, and some solicitors and, he thought, some barristers, were very uncertain as to the law on this subject at the present time; but from the point of view of estate agents, he had been able to discover very few changes. The alterations were chiefly in the sphere of procedure, the form of deeds, registration, and so forth.

The student of Acts of Parliament should always bear in mind the definitions. Definitions in legislation were sometimes a good deal wider than those employed in the language of everyday affairs. For example, the definition of a purchaser in the Act under review included a lessee, a mortgagee, and, in fact, what one would ordinarily describe as a tenant. Another precaution to take in reading long Acts of Parliament was not to dismiss without examination any sub-section; sometimes it happened that the last of a series of sub-sections made all the difference. The last sub-section of section 44, for instance, provided that the section, important as it was and marking a change in the law, only applied if and so far as a contrary intention was not expressed in the agreement. If a contrary intention was expressed, then the whole of the section was wiped out.

Another thing important to bear in mind, which was really, he supposed, the basis of the Law of Property Act, was that henceforward there could only be in law two kinds of legal estate in land—an estate in fee simple absolute in possession, and a term of years absolute. Every other sort of estate in land would be an equitable one only. One might have in law certain interests or charges in land which included easements and rights of entry and so forth, but these also must correspond with the two main estates which he had just mentioned—an easement, for example, must be for an interest equivalent to an estate in fee simple absolute in possession, or for a term of years absolute.

Mr. Mould then went through the various sections of the Act which involved any change in the law affecting vendor and purchaser from the point of view of estate agents. He mentioned one little point which was settled in this legislation. It related to those cases in which, in an accident or shipwreck, it was uncertain whether husband or wife had died first. It had been the practice in some quarters to presume that the husband, being supposedly the stronger, survived the wife; but now by this Act they were presumed to have died in seniority—that is to say, the younger was deemed to have survived the older.

The Law of Mortgages.

The last of a series of lectures on the effect of recent legislation on property was delivered by Mr. Graham Mould, barrister-at-law, at the College of Estate Management, Lincoln's Inn Fields, on January 25. Dealing on this occasion with the law of mortgages, the lecturer said that previous to the Law of Property Act, 1925, if a man had a piece of freehold land and wanted to mortgage it he conveyed the fee simple in that land to the mortgagee, and left himself only with the right to redeem the land on payment of the mortgage money together with interest. Under the new law, though the result might be much the same, the procedure was totally different, for the mortgagor did not part with the fee simple, but granted a term of 3,000 years. He left himself, so to speak, with the shell from which everything had been scooped out. Thus while formerly there was only one legal estate in the land, namely, the legal estate which passed to the mortgagee when the land was conveyed to him, there were now two legal estates, one of them the legal estate of the fee simple, which was left with the mortgagor, and the other the legal estate for the terms of 3,000 years, which passed to the mortgagee. Why the period of 3,000 years was chosen he had no idea; it might just as well have been 1,000 or 10,000 years.

There were certain perceptible advantages in the new scheme, though he did not know that they greatly interested surveyors or estate agents. Under the old law, when the owner mortgaged the fee simple, he had nothing left save the rather fluctuating right called the equity of redemption. If he paid the principal debt and interest he was entitled to have the property re-conveyed to him, so that he received the fee simple again; but this meant a re-conveyance, because he had previously parted with the fee simple, and a formal deed was necessary. Under the new scheme, inasmuch as he had never parted with the fee simple, if he paid the principal debt and interest, a receipt or anything of that kind was sufficient without the drawing up of a new deed, and there was no occasion for conveyance.

In the case of leaseholds perhaps the cha was not quite so radical as in that of f holds, but it followed generally the scheme freehold procedure. In future, leasehe could not be mortgaged by assignment, but a sub-lease for a term less by a few days t the head lease. The legal term in the h lease remained in the mortgagor in the c of a leasehold in just the same way as i freehold, but it was subject to this sub-te for the whole lease less a few days. intention of the Act, notwithstanding its so what elaborate provisions, was to simplify transfer of landed property, making it m easily alienable, approximating in this resp to the manner in which stocks and shares w dealt with. In future, to transfer a mortga it would be necessary to execute only a sl deed, without cumbersome expressions, stat merely that the mortgage or the benefit of mortgage was not transferred.

INSTITUTION OF SANITARY ENGINEER

Under the chairmanship of the retir President, Mr. Edward Willis, members the Institution of Sanitary Engineers recently at Caxton Hall, Westminster, hear the address of their new Preside Dr. G. S. Coleman, Director of the Departm of Municipal and Sanitary Engineering in Faculty of Technology, University of M chester. Looking back over the thirty ye he had been an engineer, Dr. Coleman said, a even reckoning the enormous strides t municipal engineering had made since the mid of the nineteenth century, things in the w of sanitation appeared now to be very cru However, he thought they could congratul themselves that, at any rate, this country the world in both workmanship and simplicity design. It was to the everlasting credit of British engineer that he always took the utm precautions to ensure the success of his w No trouble was too great, no investigation tedious for him to undertake to this end. Wh the engineers of other nations might deem h too cautious and slow to attempt new forms, always kept before him the high ideals of tru worthy service. It was to this that we owed freedom from disastrous failures which ot nations appeared to consider as inevitable the march of progress. Dr. Coleman urged need for more research into the many proble of sanitary engineering, and said what required was an endowed Chair of Research Sanitary Engineering.

Zinc : British Standard Specifications.

The British Engineering Standards Asso tion has just published three British Stand Specifications for different qualities of z namely :—

No. 220—1926 : Fine Zinc (or Spel (Grades A and B).

No. 221—1926 : Special Zinc (or Spelter).

No. 222—1926 : Foundry Zinc (or Spelte

The percentages of zinc in the two "fi grades are specified as 99.95 per cent. minim and 99.90 per cent. minimum respectively. special zinc the minimum zinc content is 9 per cent., and for foundry zinc 98.50 per c The specifications include particulars as to the samples are to be taken for analysis, bot regards the means to be used and also the p tions in the plates from which the samples to be extracted. Copies of these three specifications can be obtained from the B.E. Publications Department, 28, Victoria-st S.W.1, price 2s. 2d. each post free.

New President of National Federation o Employers.

At the annual meeting of the Nati Federation of Building Trade Employers, in private in London last week, Mr. E. King, of Newport (Mon.), was elected presi for the ensuing year in succession to Mr. J Hodges, of Burton-on-Trent.

Obituary.

The death is announced of Mr. F. T. H the founder of the well-known sign-w business.

ARTY WALLS: PRACTICE AND DECISIONS

By J. DOUGLAS SCOTT, A.R.I.B.A.

CHAPTER IV.—(Continued).

Where the respective surveyors are well ainted, a formal award is sometimes dis-ed with and the terms that have been ed are set forth in a letter from the building er's surveyor, stating the name of the third eyor, the nature of the proposed work, how ost thereof is to be borne, and undertaking ake good all damage caused by the execu- of the works and undertaking to pay the ining owner's surveyor's fees, together with other provisions that may have been agreed, undertaking, and this is most important, ake a formal award embodying these terms n called upon to do so. This forms an ement upon which a 6d. stamp can be put; if from death of either surveyor, or other es, the matter passes into other hands, this edure might lead to trouble, especially, if any reason, such a document were brought Court, it would certainly be held to be lid as the statutory duty has not been ormed and the Inland Revenue has been ived of its proper dues in stamps.

he fact that an arbitration is pending not be pleaded as a bar to an action for the e demand unless there is an undertaking not ue. An express stipulation in the award no action shall be brought concerning matters in dispute respecting the party would enable the Courts to stay any legal eedings that might be commenced and ld keep the dispute in the hands of the eyors as intended by Part VIII of the

dealing with old party walls which are not ood repair but are answering their existing pose, the building owner's surveyor will etimes threaten to have the wall condemned dangerous structure, when the adjoining er's surveyor will not agree to a rebuilding. usual object is to obtain payment of half cost of a new wall from the adjoining owner, the threat of condemnation is also used lever for other negotiations. It need not aken for granted, however, that a district eyor will, on the application of one rested party, report the wall as dangerous he L.C.C. if it is merely old or out of repair, representations by the other party that underpinning, repairing and thicknessing it be made serviceable will usually prevail, vided the wall is vertical.

n the case of greater user of a party wall en raising a building against a higher and ker party wall already built, not only the eased area so used must be paid for but the due proportion of the thicker wall foundations below, should the raising and an increased thickness beyond that ch was formerly required and enjoyed by previous lower building. If the extra kness required for the party wall of the inal higher building has been placed wholly the land of the owner of this building, when adjoining owner desires to make increased of the party wall for his intended higher ding, he is sometimes met with a claim for proportion of the land upon which the eased thickness has been built. This and would not be unreasonable and if ed to should be clearly set out in the rd which should direct the execution of necessary deed conveying this strip of land. s stipulation, however, usually results in claim for the payment for the land being ndoned as it involves too many com-ations.

hen the work is started, the adjoining er's surveyor should make the necessary ts of inspection as the circumstances demand, should record the details of the work and s for possible future reference in the event ettlements or other damage caused by the ding operations. In the event of discover- or being informed of any damage to his t's premises or property, the adjoining er's surveyor should immediately acquaint the building owner's surveyor so that the latter may call upon the builder to make same good, as would be provided for under the builder's contract. Should the adjoining owner's surveyor find the work being executed with improper materials and workmanship, or not in accordance with the terms of the award, he must take the matter up with the building owner's surveyor and not with the builder, and may call in the third surveyor.

In the event of dispute as to the cause, extent, or amount in value of any damage, or in the event of the progress of the work disclosing conditions hitherto unknown affecting the work or the rights and liabilities of the parties, these further differences, if agreement cannot be reached, must be settled by a further award of the three surveyors. There is no necessity for the adjoining owner's surveyor to express his satisfaction with the work upon its completion, nor is there any further obligation to the building owner's surveyor in any way.

CHAPTER V.—COUNTRY PRACTICE WHERE THE COMMON LAW APPLIES.

The practice when dealing with party structures situated outside the area governed by the London Building Act varies considerably.

There being no statutory obligation to serve a notice on an adjoining owner and no machinery existing for settling disputes or apportioning the cost of any work to a party wall, except recourse to law when voluntary efforts fail, it speaks well for the architectural profession that its members are usually able to settle these matters without litigation, in spite of a kind of perpetual militancy adopted by some surveyors.

The safest advice that can be offered to those dealing with these problems outside the Administrative County of London, is to adopt the principle of the provisions of the London Building Act; that is, the service on the adjoining owner, either personally or by registered post, of a notice with plan defining the work, the time when it is proposed to commence it, which should be a reasonable period after the service of the notice, and certainly not less than one calendar month, and requesting the adjoining owner to appoint a surveyor to act on his behalf. Failing compliance with this request, or if the adjoining owner ignores the notice entirely, at the expiration of the time mentioned in the notice for commencing the work the building owner's surveyor should write to the adjoining owner stating that the work mentioned in the notice, which he has ignored, will be proceeded with forthwith.

A reference to Chapter III on the common law decisions will indicate the contingencies that may arise, but a notice of the intended work will enable an adjoining owner to take such precautions as he may deem necessary to protect such rights as he may claim in the wall, whilst the failure to do so after notice would prejudice any future action he might afterwards seek to take.

If the adjoining owner appoints a surveyor, when the two surveyors meet, as there is no statutory duty to make a binding award, they should obtain the authority of their respective clients to do so, and should agree to the method of procedure, and also appoint a third surveyor who could be appointed as arbitrator, before proceeding with the consideration of the questions involved.

The safest way is to draw up a simple form of submission under the Arbitration Act, 1889, and for both surveyors to obtain the signatures of their respective clients thereto. A suggested form will be found at the end of these articles.

In any case, the sanction of the respective owners to whatever mode of procedure is adopted, authorising their surveyors to make a binding award dealing with the matters in difference should be obtained in writing and stamped with a 6d. stamp.

The surveyors can then proceed as under the London Building Act, but having regard only to the rights of the parties under common law, in drawing up their award or agreement. A form of award will be found at the end of these articles.

Many provincial architects prefer a less formal procedure, not being acquainted with the London practice, and set forth the intended work and conditions in a letter such as is referred to in the last chapter to which the objections mentioned would not apply. Others prefer to put the result of the negotiations into a formal agreement which should be signed by both parties over a 6d. stamp, or hand it in to a post office to get it stamped with an impressed stamp. Such an agreement should be executed in duplicate so that each party may retain a copy.

If the agreement is drawn up by a solicitor, as is often the case, the appropriate clauses relating to the work to be executed and any conditions in connection therewith should be first settled by the surveyors. It is desirable in such an agreement to provide for the appointment of, or to nominate, an independent architect as arbitrator to settle any dispute or difference that may arise in connection with the work.

THE ROMANCE OF THE ROMAN FORUM

Sir Banister Fletcher, V.-P.R.I.B.A., in a recent lecture on "Ancient Architecture" at the Central School of Arts and Crafts—the second of this term's lectures—described very interestingly the plan of ancient Rome on her seven hills, with the great Forum Romanum in the central valley. The Capitoline Hill dominated this public meeting-place on one side and the Palatine Hill, with its Imperial Palaces, on the other. The Forum Romanum was the heart of Roman civic life, and held much the same position as the Acropolis of ancient Athens, only that for the practical Roman it included the commerce of the City and was flanked by temples of the gods and courts of justice. Here political demonstrations were held much as nowadays they were held in Trafalgar-square, and from the Rostrum orators addressed the populace on matters of State and demagogues harangued the "plebs" and instilled the spirit of discontent. Stately colonnades, spacious basilicas, and the majestic temples all made a fitting setting for the activities of Roman citizens. Here the old Romans walked and talked, bargained, intrigued and worshipped. But the city grew with its growing Empire, and successive emperors, eager to ingratiate themselves with the people, built other fora for the people which rivalled in size, but never in importance, the old Forum Romanum of the citizens. All these fora were monuments to their imperial founders and ornaments to the city. Once hives of human activity, they were now dead sites—broken records of a greatness that had passed. The lecturer also described the Roman temples, which were used for State Religion, and were numerous in Rome and throughout the great Roman Empire.

The Savoy Chapel.

The condition of the fabric of the Savoy Chapel has, it is stated, been under the observation of the officers of the responsible authority, the Duchy of Lancaster. About eighteen months ago a vertical crack was found to have developed in the west wall below one of the windows, and there was also damage overhead, which has brought about a fall of some of the plaster. Examination further showed the existence of some small cracks, not all of them on one side of the chapel. What degree of importance is to be attached to the appearance of the cracks and what measures may need to be taken is, of course, a question for expert opinion. Since the damage was noticed, the building has been examined from time to time by officers of the Duchy of Lancaster and other experts.

THE LONDON BUILDING ACTS AND THEIR APPLICATION.—IV

By H. V. MILNES EMERSON, A.R.I.B.A.

PART II.—FORMATION AND WIDENING OF STREETS.

Section 6.—From and after the commencement of this Act, streets shall not be made and ways shall not be widened, altered or adapted, so as to form streets, otherwise than subject to and in accordance with the provisions set forth in this part of this Act. Provided that this Act shall not affect the powers of any local authority to widen, alter or improve any street.

Note.—Section 44 provides for the formation of new streets on a cleared area.

Section 7.—Before any person commences to form or lay out any street, whether intended to be used for carriage traffic or for foot traffic only, such person shall make an application in writing to the Council for their sanction to the formation or laying-out of such street, either for carriage traffic or for foot traffic (as the case may be).

Every such application shall be accompanied by plans and sections, with such particulars in relation thereto as may be required by printed regulations issued by the Council, and the Council shall forthwith communicate every such application to the local authority.

And no person shall commence to form or lay out any street for carriage traffic or for foot traffic without having obtained the sanction of the Council.

Section 8.—For the purpose of this part of this Act a person shall be deemed to commence to form or lay out a street—

if he erect a fence or other boundary, or lay down lines of kerbing, or level the surface of the grounds so as to define the course or direction of a street;

or if he form the foundations of a house in such manner, and in such position as that such house will or may become one of three or more houses abutting on or erected beside land on which a street is intended to be, or may be thereafter, laid out or formed.

Provided that no person shall be deemed to commence to form or lay out a street if he do any of the acts in this section mentioned for some purpose other than that of forming or laying out a street.

Note.—The L.C.C. require notice in every case before a new street is commenced.

Section 200 provides that every person who (*a*) commences to form or lay out, alter or adapt any street, or way, without having first obtained the sanction of the Council, &c., shall be liable to a penalty not exceeding £10 for every such offence and to a daily penalty not exceeding 40 shillings.

The by-laws as to the formation of new streets in the Metropolis are those embodied in the Metropolis Management Act, 1855, and are by Section 216 of this Act retained in force. The by-laws are briefly as follows:—

1. Four weeks' written notice must be given to the L.C.C. before any new street is laid out also plan of ground showing same.

2. Width of street for carriage traffic, not less than 40 ft., and for foot traffic not less than 20 ft.

3. Every street (unless consent otherwise) to have at least two entrances.

4. Measurement of width to be taken at right angles to the course of the road.

5. Minimum fall from centre of road to be not less than three-eighths of an inch for every foot of breadth.

6. Kerb not to be less than 4 in. or more than 8 ins. above gutter and fall to footpaths to ½ in. per ft. unpaved and ¼ in. per ft. when paved.

7. The word "street" is not defined to the same extent as in section 5, subsection (1), but this is not necessary as the Act overrules the by-law.

8. Provides for a penalty of 40 shillings and 20 shillings for each day for a breach of these by-laws.

The following cases bear upon these and following sections:—

A road formed in 1870 and maintained and used as a private road. A purchaser of a plot in 1903 took down the fence between his plot and the road, erected a new fence, and built a house 50 ft. back.

It was held that he had not commenced to form, or lay-out, or adopt a street for traffic within sections 7, 8 and 10 (L.C.C. *v* King, 3 L.G.R. 1046).

Two blocks of artisans' dwellings erected on vacant land, containing forty separate tenements, and for the convenience and access of the tenants, had a courtyard formed between the two blocks, shut off from the street by means of gates. It was held that such a space or passage forming an entrance from a public street to artisans' dwellings was not a road, passage or way laid out as a street for foot traffic. Sections 8 and 10, L.C.C. *v* Davis, 64 L.J.M.C 212.)

A block of mansions (containing 42 flats) with quadrangle forming courtyard to same intended for use of tenants and others having business there, approached from the road with one entrance only, through an archway, with gates, was held not to be a street within section 7. (Wood *v.* L.C.C. 73 L.T. 313, 1895).

In the case of Armstrong *v.* L.C.C. (81 L.T. 638, 1900) the foregoing decision was dissented from. Application having been made to and refused by the L.C.C. for consent to form a private carriageway (40 ft. wide and 600 ft. long) affording access to twenty buildings, each containing eight flats, sixteen of these buildings to be erected around a quadrangle, the quadrangle having a garden in the centre and connected with the public street by a straight piece of road with the remaining buildings on either side, the carriageway to have gates at the entrance to the public street attended to by a porter. The owner, after giving notice, commenced building operations, and was convicted by the local justices of commencing to lay-out a street without the consent of the Council. Upon appeal to the High Court it was held that the way round the courtyard in question was a street and that the owner was rightly convicted.

A site cleared of old buildings and laid out with a court with 24 shops on one side and 55 small one-story shops on the other side, the court being at basement level and approached from the adjoining streets by means of steps (shut off with gates) and used as a market or bazaar, it was held that there had been a commencement to form a street. (L.C.C. *v.* Davis, 91 L.T. 555, 1904.)

Where a builder, not being the freeholder, had erected six shops in line along a street and had left a space of 40 ft., the property of the freeholder, between the last shop and the houses on the same side (which gave access to a brickfield owned by the freeholder), the last shop being built as a corner house with stables, &c., in the rear (the only access to which was over the said space), it was held that the builder had not commenced to form or lay-out a street, because although the house as built would be available if the space was turned into a street, it was also built to be available otherwise. (L.C.C. *v.* Dixon, 80 L.T. 232, 1899.)

A recent application was made to the L.C.C. for consent to the erection of a number of lock-up garages upon a large area of ground surrounded on all four sides with houses. The access was by means of a private 40 ft. space between the houses in one street (similar to the above) and a 20 ft. private space between the houses in another street. The 40 ft. road was to be the entrance and the 20 ft. way the exit. Between the rows of garages were open spaces or roads about 18 to 20 ft. wide. The L.C.C. refused consent to the formation laying out for carriage traffic of streets lead to garages, &c., the reasons for the refusal be that the new streets would not be of the width of 40 ft. clear and would not, at from the time of forming and laying out, aff direct communication between two stre formed and laid out for carriage traffic.

It will be seen from the effect of the forego decisions the L.C.C. are inclined to treat most insignificant cases as ones of str formation, and they have carried the Armstr case into effect in regard to the foregoing gar application, although the whole of the prope from the gates in the one road to the gates the other road is private property and public (other than those who rented the garag would not have the right of access to premises. The L.C.C., I understand, adopting this attitude to other garage p posals.

Section 9.—In this section it is distinc stated the cases upon which the Council only refuse consent, and in view of their decisi relating to the garages the first and four sections are worth quoting:—

(1) Where any street is proposed to formed or laid out for carriage traffic with being of or being widened to the full wid of 40 ft. clear or such other width as m be required under the provisions of this A

(4) Where any street not being within City is proposed to be formed or laid out such manner that such street will not at a from the time of forming and laying out t same afford direct communication betwe two streets such two streets being (where is intended to form or lay out such street carriage traffic) streets formed and laid o for carriage traffic.

OBITUARY

Sir Charles Warren.

General Sir Charles Warren, who di recently at Weston-super-Mare, in his 87 year, although a very distinguished soldie will chiefly be remembered for his researches in archæology. The son of Major-General S Charles Warren, he went from Cheltenham Woolwich Academy, and was then gazette to the Sappers. In 1875 he had attained th rank of brevet lieutenant-colonel, the brev rank having been obtained in consideratio of his researches in Palestine, carried out in th face of great difficulties attendant upon the lac of sufficient funds. He wrote several book upon the discoveries made by him in Jerusalem among the most interesting being his "Unde ground Jerusalem," published in 1876. Th is not only a romance of research and excitin incident, but is also a curious revelation temperament. In 1880 he wrote "The Temp and the Tomb," while four years later, collaboration with Condal, "Jerusalem" w brought out.

Walter Warren Seton.

We regret to record the death of Dr. Walt Seton, the historian and antiquary, and secr tary of University College, London, at the ear age of 44. Franciscan studies formed one Seton's interests, and he had been secreta and treasurer of the British Society of Fra ciscan Studies since 1923. He edited "Tw Fifteenth-Century Franciscan Rules," 191 "Blessed Agnes of Bohemia," 1915; "Bless Giles of Assisi," 1918; and "Vita di S. Chia Vergine," 1921; and published "Nichol Glassberger and his Works," 1923, as well numerous articles in "Archivum Franciscanu Historicum," the *Scottish Historical Revie* and the *Antiquaries' Journal*. He was a doct of law of Padua and a doctor of philosophy Prague, and a fellow of the Society of An quaries and of the Royal Historical Society.

Robert I. Calwell.

The death took place on Wednesday of l week at Belfast, of Mr. Robert I. Calw M.Inst.C.E. The Ulster Convention buildi was one of his most important works.

RCHITECTS' & BUILDERS' INQUIRY BUREAU

e are glad to give questions and answers, but cannot ept responsibility for contributed replies, especially on l matters.

by we appeal to our correspondents to submit their ries on paper of a size easily filed, and written as tly as possible, or, better still, in typewriting?—ED.

By-Laws Relating to Buildings and Streets.

[REPLY TO "SCRUTATOR," JANUARY 14.]

SIR,—The aim of the model by-law in respect the heights of rooms in attics, &c., is to vent the likelihood of insanitary conditions sing. These are more likely to prevail in ms with sloping ceilings than in those structed with flat ceilings. To attain the l aimed at every attempt is made to secure a d *average* height over the whole of the r of the room, and this could not be done minimum height (5 ft.) were not stipulated. Apart from this, there is the further stipula- n that the full prescribed height must extend r at least two-thirds of the floor; this, in ny cases, results in the minimum height of ft. never being reached. In any case the vision as to the two-thirds above referred would make it impossible to build as licated on the right hand of the diagram companying the question, and the temptation erred to could not arise.

t is under Section 157 of the Public Health t, 1875, that (apart from any local Act) al authorities obtain their powers to make -laws as to (*inter alia*) new streets and build- s, and it is under this section by-laws are de by local authorities in respect to windows lighting purposes. It is true that it is quite ssible that a room may be dark because of position in which the window is placed, t a minimum area of one-tenth the floor area hich is little enough) is prescribed for the ndow space clear of the sash frames; also, nerally, the height of the window above the or, and the fact that it must open into the ternal air and be made to open for venti- ion is demanded.

The point that "Scrutator" raises anent the ross wall" arises from the fact that by-laws nerally do not prescribe for the one-story ll but for a wall 30 ft. in length which may 25 ft. in height, sufficient for two stories. ie by-laws should undoubtedly be made ore elastic in many respects.

BY-LAWS.

Precautions Against Dry Rot.

SIR,—I recently noticed in my house, built n months ago, that, principally on account of e air bricks being on a level with the floor, ere was no through current of air, and all the oring joists became wet. The linoleum has en taken up and the air bricks set lower and e flooring joists are now drying out. Is there y danger of dry rot, and what further pre- utions should be taken before and after all the ber is thoroughly dry?

H. S.

Demolishing Hollow Brick Walls.

SIR,—I shall be glad to know whether any of ur readers have had experience of demolishing llow brick walls in which iron ties have been ed. If so, would they kindly answer the lowing questions:—What was the condition the ties? Were they rusted through? How g had they been in the wall? Was there any rtar lodged on the ties?

H. E. B.

Cottage Casements.

SIR,—I have been so impressed with the mber of operations involved in forming rises and reveals, &c., in plaster round linary cottage casement windows, that I ve seriously considered using 7 in. by 2¼ in. pated linings to all these windows with the ck face flush with the plaster and cloaked th a small architrave. The reveals are en done once for all, and the inner edge of e frames gives the line for the plasterer to ish to. I wonder whether any of your quantity surveying readers would be sufficiently interested to give an opinion upon this arrangement from an economical point of view?

EXPERIMENT.

Reinforcement of Floor.

[REPLY TO "PRACTICAL," JANUARY 28.]

SIR,—To be consistent, "Practical" should arrange bars to dip down from the top of the free ends to a point a quarter of the span along the beam, if the ends are pinned into the supports, since the ends are then cantilevers for some such distance, and the rods would then follow the plane of maximum tension. In *in situ* work there is no need to run any of the rods straight through over the central support, unless the floor is being reinforced also in its compressional members, as is often the case where it is desired to bring the neutral axis nearer the centre of the floor. If the work is pre-cast, a proportion of rods run straight through will reduce the risk of damage when handling. It is hardly possible to advise in fuller detail without further particulars of the proposed floor.

STRUCTURE.

Measurement by Cube.

SIR,—Can you inform me what is the correct way to measure the cube of a building finished with a mansard roof? Is it correct to take the area on plan at the junction of the slopes by the full height, plus the remaining area of the plan by the height to half-way up the steeper slope, and then deal with the top pitch as for an ordinary roof?

ESTIMATE.

HOUSING (RURAL WORKERS) ACT, 1926.

THE Ministry of Health has issued a circular (No. 756, price 2d. net) on this Act, explaining its provisions. "The object of the Act," it is stated, "is to secure a contribution to the improvement of housing conditions for agricultural labourers and other country workers by facilitating the reconditioning of old houses in such a way as to bring them up to modern standards of comfort and sanitation and by the conversion into dwellings of buildings not previously used for that purpose. To this end the Act provides for assistance both by grants (towards which exchequer contributions will be available) and by loans, to be made available by local authorities to owners who are willing to undertake the carrying out of approved works. The Act attaches conditions to the grant of public money which are designed to secure that the benefits shall go practically entirely to the tenants and not to the landlords. The Act directs attention to the necessity for preserving any historic, architectural or artistic interests in buildings dealt with under the Act, and to the importance of securing that the dwellings when completed will be in all respects satisfactory. The Act is temporary, assistance only being available in respect of applications received by the local authority before October 1, 1931.

"It is contemplated that the Act should be administered by local authorities in accordance with schemes to be approved by the Minister. The first step, therefore, to be taken by the local authority is the formulation of this scheme for submission to the Minister. The scheme, which should indicate the method in which the local authority propose to apply the act to their area, should form the basis of information to be given to possible applicants for assistance, and it is suggested that when a scheme has been approved by the Minister the local authority should take steps to publish as widely as possible, by leaflets or otherwise, information as to the assistance available and the way in which it may be obtained.

"The Minister desires to emphasise the importance of the local authority taking immediate steps to formulate and submit their general scheme. It must be understood that it is essential that the approval of the Minister to the general scheme must be obtained before the local authority make any promises of assistance under the Act, and that individual applicants must obtain the approval of the local authority specifically for the purpose of assistance under the Act before commencing any of the work in respect of which they desire to obtain assistance. It will not be possible to admit to assistance under the Act any case which does not comply with these conditions and the particular attention of local authorities and of individual applicants is directed to these points.

"Assistance under the Act is available—(1) for the conversion into dwellings of buildings not previously used for that purpose; (2) for the improvement of existing dwelling accommodation. In this connection the Minister relies on local authorities to make such suitable arrangements in carrying out schemes under the Act as will prevent the disfigurement of buildings and will secure that so far as possible the special character, beauty and fitness of these buildings for their surroundings will be maintained. It will be realised (continues the circular) that the beauty of the English countryside depends very largely on the general appropriateness of local materials and character of building generally found in the older buildings. The types of cottages vary very much in different localities and go far to give a special character to each district. Consequently, the preservation or destruction of the amenity of the countryside depends not merely on the smaller number of cottages which have an exceptionally high degree of architectural merit or special antiquarian interest, but on the larger number of country cottages of the average local type.

"If the work of reconditioning contemplated by the Act is carried out with reasonable skill and care, very much may be done to preserve and perpetuate the styles of cottage architecture which have come down to us from former times; while, on the contrary, if repairs and conditions are carried out without regard to the suitability of the material and treatment or so as to involve the destruction of the proportion and beauty of the design, much damage might result. Local authorities will realise that much may be accomplished by timely and tactful suggestion in such matters, and, bearing this in mind, should consider what method will be most convenient under their local conditions for securing this end; whether it will be best to co-operate with some voluntary advisory committee or panel, or whether to appoint for the different districts an architect who has such knowledge of the locality and has had such experience of the kind of work contemplated as will enable him to advise the local authority in each case whether contemplated works are or are not appropriate."

A local authority cannot grant assistance under the Act where the value of the building after the completion of proposed works exceeds £400; where the estimated cost of the works to be executed in respect of the dwelling is less than £50, or in the case of works for the grant benefit of two or more dwellings is less than £100; where the interest of the applicant is a leasehold interest with not more than 30 years unexpired; or in the case of a house to which any historic, architectural, or artistic interest attaches, where the proposed works would destroy or seriously diminish that interest. One of the conditions attaching to grants by local authorities is that the dwelling shall not be occupied except by a person, whether as owner or tenant, whose income is such that he would not ordinarily pay a rent in excess of that paid by agricultural workers. Loans, with interest, will be secured by mortgage; the amount of principal must not exceed 90 per cent. Local authorities will be furnished with forms of application for Exchequer subsidy.

Correction.

In reporting Mr. J. M. Macfarlane's speech at Manchester in our last issue we referred to him as "President of the Institute of Builders in Manchester." This is incorrect, Mr. Macfarlane being Chairman of the Manchester Branch of the Institute.

THE BUILDING TRADE

BY-LAWS RELATING TO BUILDINGS AND STREETS.—V

Control by By-laws.

HAVING considered the statutory powers under which by-laws are made and the recommendations of the Committee on the best method by which control can be exercised, which the Committee decided to be by by-laws, we now come to consider what was described as the central question the Committee was appointed to advise upon, the control by by-law over buildings and streets. It has been necessary to mention the various methods of control now in existence which we referred to in our last article because the Committee found that many of the complaints urged against by-laws were founded upon a misapprehension, many grievances being attributed to by-laws which were really due to other forms of restriction.

The complaints which could properly be attributed to by-laws were classified in the Report under three heads: (1) the retention of a considerable number of by-law codes either obsolete or in various degrees of obsolescence; (2) the imperfections of the authorising statutes; and (3) that the system set up by section 157 of the Public Health Act, 1875, leaving each local authority to formulate its own by-laws, has allowed an irksome variation, though sometimes only in a slightly different wording from the model codes.

Under the first heading the Committee found that difficulty from obsolete by-laws was most noticeable where in a rural area the by-laws have followed the old urban model, although it was by no means confined to such cases and it is usually found in the smaller places where there has been least development, although one case had been cited in evidence where a large county borough had retained by-laws made in 1867.

Under the second heading the Committee observed that whilst the Ministry of Health appeared in the main to have succeeded in keeping their models abreast of enlightened architectural practice, the imperfections of the authorising statutes had caused difficulties; also it was always possible to find flaws in such a code, or even (in spite of all attempts to provide beforehand for such a possibility by the use of general words) for some new method or material to come into use which had not been provided for. It was also pointed out that by-laws not in themselves unsuitable for the purposes for which they were intended may, owing to the limits imposed by the governing enactments, prove ineffective to secure good building development or may divert attention and expenditure to requirements which, owing to improved methods of development, such as the limitation of the number of houses on a given area, have ceased to have the importance they would have had.

On the third heading the Committee considered this objection the least important of the three, as divergence in by-laws was not such a snare to the architect and builder as diversity of local Acts, but they admitted that homogeneous wording of by-laws in force in different districts was of assistance to architects and builders and also to the lawyer, inasmuch as the interpretation of a clause once settled would govern all districts, and they suggested that the Ministry of Health should endeavour to secure that by-laws newly made should not vary so much as those at present in force have been allowed to from the model forms at the time of submission, and that the Ministry to effect this should be a little less ready to allow deviations from a common form clause without some definite reason in connection with the local circumstances.

It was also pointed out in the Report that the recommendations we are about to refer to meet the objections in the first and second grounds of complaint set out above under the headings (1) and (2), viz., the retention of obsolete by-laws and the imperfections of the authorising statutes would incidentally tend to remove divergence in by-laws. The Committee discussed these two grounds of complaint jointly. The Report sketches the process by which the existing by-law system has grown up, commencing from the by-law-making powers conferred by the Public Health Act, 1875, which made by-laws subject to confirmation by the predecessors of the Ministry of Health, and the issue of the first model series in 1877, up to the urban and intermediate models which were subject to great revision in 1912. The Committee observed that from the complaints made it might be thought that the original model series remained in force to the time when the Committee were sitting, and therefore referred to the various revisions which had taken place; besides the issue of the rural series which first appeared in 1901 and the intermediate model first issued in 1905, the Committee pointed out that the constant revision and amendment of the models rendered necessary to keep them up to date, though an inevitable process, is one which must in itself to some degree contribute to divergence in different areas, and they came to this important conclusion, "that while there may be legitimate differences of opinion as to particular clauses, it is broadly true to say that if all local by-laws could be brought up to the model standard almost all the complaints they had received which really had to do with by-laws would have been avoided."

As to these complaints, the following passage from the Report is of interest:—"Distinct complaints such as unnecessary uniformity in the width of streets, unduly stringent heights of rooms, the prohibition of the most modern building materials, the excessive requirements in the matter of yard paving, or of timber scantlings (two subjects not touched by the models of the Board), or of drainage, have proved to be referable to other methods of control than by-laws, or to by-laws not in agreement with the present, or even for the most part with the older, model series. And not only have the Board done all they could under the existing law to keep the model series up to the standard of the best modern building practice (in which the evidence before us seems to show that in the main they have succeeded), but especially and increasingly in recent years they have made great efforts to persuade local authorities also to keep local by-laws up to date."

Keeping By-Laws up to date.

The Report then contains some examples of the difficulties experienced by the Board in persuading local authorities to bring their by-laws up to date, and then states: "This is the crux of the whole matter: What steps can best be taken to ensure that local by-laws are brought and kept up to the standard attained by the models, with of course such variations as are needed for local circumstances? This involves two problems related but distinct: firstly, the best method to be adopted for bringing up to date existing by-laws which may be unduly restrictive, and secondly, the best method of securing that by-laws, when once brought up to date throughout the country shall not fall behind the general level of the best practice in building and development."

This is one of the most interesting and important subjects dealt with in the Report. The Committee pointed out that the Ministry of Health have no powers when once by-laws have been confirmed (except under the Housing Acts) to interpret them, to enforce them, to entertain appeals from their requirements, nor to insist upon their repeal.

Three suggestions were laid before the Committee for dealing with such difficulties in the existing position as are properly referable to by-laws: (1) The amendment of the Housing Town-Planning Act, 1909, section 44; (2) t conferring upon a builder the right to fol the model series instead of the series in fo in the district; and (3) the automatic sweep away of all existing by-laws at a certain da or at different dates, according to the or in which they were confirmed.

The Committee adopted the first and th suggestions, as we shall show hereafter, dismissed the second, although they recogni that it was in some ways the readiest meth for securing the object they had in view.

The first suggestion has already been put force as we have stated in former articl but only to a limited extent. Section 44 of t Housing Act, 1909, has been extended section 101 of the Housing Act, 1925, so as apply to the erection of any buildings wit any borough or urban or rural district, as we explained in our first article, the secti only applies where the Minister can be satisfi that "the erection of any building is or likely to be unreasonably impeded in con quence of any by-laws." The second su gestion—the conferring upon the builder t right to follow the model code of the Minist instead of the by-laws in force in the particul district—had some attraction for the Co mittee, but it was rejected for the followi reasons: To have concurrently in operati two sets of by-laws would lead to sor confusion, might occasionally allow t adoption of methods or materials which in lo circumstances have properly been forbidde and would inevitably lend to lax administrati as local authorities would not consider it wor while to revise by-laws themselves under su circumstances, whilst friction would occ between the builder and the local authority.

These reasons appear unanswerable on t suggestion as it stood, but when reading th part of the Report it occurred to us that th suggestion could be varied and that the obje desired could be obtained by putting the mod series in force in the various districts to whi they are applicable, leaving local authoriti an opportunity to show cause for any deviatio from the models called for by local circum stances. This is not similar to the suggesti we referred to at the end of our last article, t enforcement of a uniform minimum code eith by statute or statutory order, a suggestio rejected by the Committee.

After we had penned the above propos we found that in another section of the Repor when the Committee were considering th question whether it should any longer be le optional to local authorities to omit to mak by-laws for their districts, a suggestion som what akin to the above had been made b two witnesses, and we quote from paragrap 108 of the Report: "We have already spoke of the diversity of building law in differer districts, and with this especially in view w were at one stage of our inquiry attracted b the suggestion made to us by Colonel Le Ro Lewis, and more fully explained by Mr. Su cliffe, who advocated a single code of by-law for adoption in all districts subject to necessar local variations to meet, for instance, differenc of climate and with further variations accordin to the nature and density of the developmen This is an application and extension such as w advocate in paragraph 30 of the principle clause 5 in the Intermediate Model Series, an as the application of this plan would be abs lutely automatic there is something to be sai in favour of it. Nevertheless upon consider tion we have come to the conclusion that would involve a good deal of trouble to arch tects and builders, local authorities an inhabitants of areas which were not in nee or likely to stand in need of the stricter clause particularly those (220 in number at th opening of our inquiry) which have not ha by-laws hitherto of any kind; that such single code with alternatives automatical operating would be exceedingly complex, ar that on the whole it would involve perplexi

d changes in established methods which it is necessary to introduce. Some consideration due, we think, to the country builder, and for s sake, if for no other reason, we prefer to see e building code kept as simple as it can be, process certainly aided by the tripartite vision into urban intermediate and rural." lause 5 above referred to has now been serted in the urban model code in consequence of the recommendation of the Committee.)

This passage occurs in a section of the eport where the matter being considered was ether some by-laws should not be made under mpulsion in all districts (a question we shall fer to in a later article), but this suggestion, e that referred to at the conclusion of our t article, is not the same as that we have de above, for it is quite a different thing to t in operation one standard set of by-laws all districts, and to put in force, as we have ggested, the different models appropriate to e several districts. In the first case considerable variation would be necessary in many tricts from the standard forms, and the ticism of the Committee would be justified, t if the appropriate model for each district cording to its stage of development were put force it would very generally be accepted d variation would only be claimed on very ecial grounds.

As the Committee found the two proposals de, attractive, we propose in our next article endeavour to show that our proposal meets good many of the objections which caused ose proposals to be rejected.

ATIONAL ASSOCIATION F CLAYWORKS MANAGERS

We have received the following "Bulletin" m the Secretary of this Association :—

Meetings.—An organising meeting, convened Mr. Titus Searson, was held in the Midland tel, Derby, on January 13, when it was animously decided to form a branch of the sociation to be named the Nottingham and rbyshire Branch. Mr. Titus Searson was cted chairman, and Mr. J. Vernon secretary. e next meeting of this branch will be held at Midland Hotel, Derby, on Thursday, bruary 10, at 7 p.m. Arrangements are ng made to have a paper read and cussed.

Staffordshire and District.—The committee of this branch met on January 11 and arranging to hold a meeting, probably on bruary 12.

Flintshire, Denbighshire, Cheshire and strict.—A meeting will be held at the Westnster Hotel, Chester, on February 5, at 3 p.m., l a paper read.

Sheffield and District.—A meeting has n arranged to be held in the Royal Victoria tel, Sheffield, on January 29, at 7.30 p.m. rangements are being made to have a paper d.

Lincolnshire and District.—An organising eting was held at the Metropole, Hobartet, on Saturday, January 29.

lectrical Contracting : Variation of Wages.

The National Federated Electrical Association ounce that, in accordance with the National ges Agreements entered into by the National erated Electrical Association and the Electri- Trades Union, the variation in cost of living ifies a 24 and five-twelfths per cent. reduction vages, and that the net hourly rates of pay licable to the respective Grades of the eements are as follows :—

rade A ..	1/10¾	Grade C	1/7
rade B ..	1/8½	Grade D	1/5½

*This rate includes a travelling allowance. No further allowances to be paid except as provided by Rule 9 of the London Rules, dated February, 1920.

he above rates will come into effect on the nd pay day in February, 1927, for the od covered by that pay day, and will in current up to and including the period red by the first pay day in June, 1927.

BUILDING UNIONS

The trade unions in the building industry sent representatives last Friday to a conference summoned by the General Council of the Trades Union Congress in fulfilment of an instruction by last year's Congress to call conferences of the trade groups "in order to arrange for the merging of the separate unions within those groups into industrial unions." At bottom, says the *Times*, the differences spring from the rivalries of unions of skilled and unskilled men The bricklayers who belong to the Amalgamated Union of Building Trade Workers, and the plasterers in the Plasterers and Granolithic and Cement Workers Union, both seceded from the National Federation of Building Trades Operatives in 1925 in order to follow independent policies of economic improvement. The bricklayers' explanation was that they must be free to press for payment for time lost through stress of weather or other causes over which they had no control. The plasterers did not trouble to name any particular matter of difference with the federation, but frankly stated that independence gave them greater bargaining power. It is well known that the supply of bricklayers and plasterers is below the requirements of the industry.

Friday's conference showed that the bricklayers' union (the Amalgamated Union of Building Trade Workers), as well as the National Federation, is considering the possibility of regaining unity in a new confederation. The discussions, which were described as wholly friendly, were preliminary in character, but they indicated the extent of the difficulties to be overcome. A first necessity of unity, whatever form of organisation may be set up, is the establishment of a single, centralised control. The conference, it is reported, did not reach a point from which agreement on this essential condition could be described as in sight. An official statement said :—

"Representatives of the various organisations expressed their sympathy with the purpose for which the meeting had been called, and the difficulties which presented themselves were considered in a most sympathetic and amicable spirit. It was finally agreed that the proceedings should be reported to the General Council, and the conference adjourned until a date to be decided later. In the meantime the executives of the unions concerned are to discuss the matter in the light of the discussions which took place to-day."

TOWN PLANNING IN LANCASHIRE

Representatives of the South-West Lancashire local authorities met in Liverpool recently and formed a joint town-planning committee for their area. They also decided to ask their respective bodies to spend the equivalent of a twentieth of a 1d. rate for three years on the co-ordination of local developments. The new committee embraces the authorities of the county boroughs of Liverpool, Bootle, St. Helens, and Southport; the urban districts of Formby, Great Crosby, Huyton-with-Roby, Lathom, and Burscough, Litherland, Little Crosby, Ormskirk, Prescot, Rainford, Skelmersdale, Waterloo-with-Seaforth and Widnes; and the rural districts of Sefton and Whiston.

Mr. G. L. Pepler, chief Town-Planning Inspector to the Ministry of Health, said there were now over 40 joint town-planning committees operating all over England and Wales. They covered more than 6,000,000 acres, and comprised about 600 local authorities. Several joint committees were giving careful attention to the question of reserving tracts of country for recreation and food production, and to preserve the beauties of the countryside.

NEW BUILDINGS IN LONDON

Aldwych.—THEATRES.—A scheme for the building of four theatres on the vacant plots of land in Aldwych, W.C., is being developed by Mr. Charles Gulliver, who hopes to lay it before the London County Council, the owners of the land, within the next six weeks. The buildings, it is estimated, will cost £500,000. One theatre, it is intended, is to have a seating capacity of 2,160, a second 1,600, a third 1,342, and a fourth 1,100. Two of the four playhouses will have frontages on the Strand and two will face Kingsway. If the land is available one theatre will have next to it a building containing a cabaret and a restaurant with suites of offices above it. Between the two buildings will be an arcade with shops, and above that a winter garden. Messrs. W. & T. R. Milburn, of 11, Esplanade West, Sunderland, are the architects.

Catford.—CINEMA.—At Rushey Green, Catford, a new picture theatre is to be erected to the plans of Mr. E. A. Stone, of 20, Berkeley-street, W.1. This cinema is to accommodate 4,000 persons. The builders are Messrs. Watts.

Charing Cross.—ESCALATORS.—The Underground Railways are to erect three more escalators at Charing Cross Station in connection with the general remodelling of the station.

Colney Hatch.—ASYLUM.—Messrs. C. Miskin & Sons, of St. Albans, are the general contractors for the new wing now being erected at the Mental Asylum, Colney Hatch. The work is being carried out to the design of Mr. G. Topham Forrest, F.R.I.B.A., Architect to the L.C.C. The constructional steelwork is being supplied by Messrs. Young & Co., 6, Queen Anne's-gate, S.W. 1.

Edgware-road.—CINEMA.—A 3,000 capacity cinema has been planned by Mr. A. E. Abrahams, to occupy the eastern corner of the junction of Edgware-road and Oxford-street.

Francis-street.—EXTENSIONS.—Premises to be known as the Army and Navy Mansions are now being erected at the back of the stores in Victoria-street. This building is for the use of the Army and Navy Co-operative Society, Ltd., and not as mansions. Sir Aston Webb, P.-P.R.A., & Son, of 19, Queen Anne's-gate, S.W. 1, are the architects; and Messrs. Dove Bros., Ltd., 1, Cloudesley-place, N. 1, are the builders.

Fulham.—SHOWROOMS.—The Fulham Council is considering a proposal for the erection of buildings in the Broadway for electricity show rooms. The scheme is to cost £12,000.

Hendon.—EXCHANGE.—Tenders are now being invited by H.M. Office of Works for a new telephone exchange at Hendon. Mr. Scott, of the Architects' Department, has prepared the plans.

Kennington.—TENEMENTS.—Messrs. R. J. Rowley, of Belmont Works, Belmont-road, N.15, are to erect 105 tenements on the White Hart-street site, Kennington, for the London County Council. The plans for the dwellings have been prepared by the L.C.C. Architect; and the price of the tender is £53,180.

Lee.—GARAGES.—The London County Council has sanctioned the erection of fifty-one lock-up garages at Burnt Ash Hill, next Lee Railway Station, by Mr. S. F. Prior.

Lee Green.—GARAGES.—Messrs. Purvis & Purvis, architects, of 417, New Cross-road, have received the London County Council's approval to the erection of 43 lock-up garages, with car showroom, &c., at Meadow-court-road, Lee Green. No contracts have yet been let.

Lime-grove.—STUDIO.—The Gaumont Co. are erecting a new studio in Lime-grove, Shepherd's Bush, W.12. The new building will be next to the present studio, and will be of a much larger type. The builders are Messrs. J. Jarvis & Sons, Ltd., 8, Wormwood-street, E.C.2.

London Bridge.—OMNIBUS STATION.—The London General Omnibus Co., by arrangement with the Southern Railway, are to erect an ominbus station. Four wooden platforms—two long and two short—are to be erected. Should the scheme meet with public approval, it is probable that concrete platforms with departure posts will be erected.

Stratford.—CINEMA.—The new £120,000 cinema and variety theatre in Tramways-avenue, Stratford, is about to be commenced. The building is to accommodate 5,000. The architect is Mr. George Coles, F.R.I.B.A., of 40, Craven-street, W.C.2.

Tottenham.—OFFICE.—Mr. Scott, of the Office of Works, has prepared plans for the erection of a new post office at Tottenham, N. Tenders are now being invited.

Waterloo.—ESCALATORS.—Escalators are to be installed at the Waterloo Underground station for the Underground Railways, during this year.

Waterloo-road.—ALTERATION.—At the annual meeting of the supporters of the "Old Vic." Sir Wilmot Herringham, chairman of the governing body, said that the main problem now before them was that of the improvement of the auditorium, which had been called for by the L.C.C. Mr. Philip Tilden said that the theatre would be greatly brightened and the line of sight from all parts of the house improved.

Westminster Bridge. — BUILDING. — St. Thomas's Hospital is to have a new residential building for its students. The building will include a club-room in addition to the residential quarters. The architect is Mr. H. W. Currey, of 37, Norfolk-street, W.C.2, and the builders are Messrs. Sabey & Son.

NEW COMPANIES

THE particulars quoted below have been compiled by Messrs. Jordan & Sons, Ltd., Company Registration Agents, of 116 & 117, Chancery-lane, W.C.2, from the documents available at the Companies' Registry.

HIGH BRIDGE HOUSE (NEWCASTLE-UPON-TYNE), LTD. (218,226). Registered December 16. 70, Pilgrim-street, Newcastle-upon-Tyne. Land and building owners, builders and contractors, &c. Nominal capital, £500.

H. KING & SONS, LTD. (218,189). Registered December 15. 97B, Drayton-gardens, South Kensington, S.W. 10. Builders, &c. Nominal capital, £1,000.

SYDNEY CLARKE, LTD. (218,205). Registered December 15. Builder and contractor. Nominal capital, £3,000.

MARK HOOKHAM, LTD. (218,200). Registered December 15. Builder and contractor. Nominal capital, £10,000.

M. J. ALLEN & SONS, LTD. (218,199). Registered December 15. Builders, contractors, &c. Nominal capital, £6,000.

SHEPHERDS (ACTON), LTD. (218,303). Registered December 18. Slag merchants, owners and lessees of quarries, mines and ballast heaps, &c. Nominal capital, £20,000.

JAMES BURRELL, LTD. (218,384). Registered December 22. Builders' merchants and manufacturers. Nominal capital, £5,000.

ROBERT BEATY & SONS, LTD. (218,302). Registered December 18. Lee-road, Harpurhey, Manchester. Builders and contractors, joiners, &c. Nominal capital, £4,000.

J. R. DAVIES, LTD. (218,415). Registered December 23. 4, Paternoster-square, E.C.4. Builders and estate developers. Nominal capital, £5,000.

LONGWORTH & WHITELEY, LTD. (218,430). Registered December 24. 4, St. Mary's Parsonage, Manchester. Builders, building contractors. Nominal capital, £1,000.

TOLWORTH ESTATES, LTD. (218,446). Registered December 24. Builders, contractors, decorators, &c. Nominal capital, £1,000.

HOWARD FARROW, LTD. (218,492). Registered December 28. 1, Russell-parade, Golders Green, N.W.11. Public works contractors, builders and general contractors. Nominal capital, £50,000.

W. A. HARRIS, LTD. (218,505). Registered December 28. 108, Campden Hill-road, Kensington, W.8. Builders, decorators, &c. Nominal capital, £500.

NEWCASTLE BUILDING TRADES ASSOCIATION

There was an attendance of over 300 members of the building and allied industries at the annual dinner of the Newcastle District Building Trades Employers' Association, which was held on January 13 at the Oxford Galleries, under the chairmanship of Mr. Thomas Clements, President of the organisation.

"Our Governing Authorities" was proposed by Councillor Wm. Hall, of Gateshead (the president of the Northern Counties Federation of Building Trades Employers), and the Lord Mayor of Newcastle, Councillor A. W. Lambert, responded. The Sheriff, Councillor R. Stanley Dalgleish, then proposed the toast "The Building Trade," and referred to the activity of the industry. He emphasised the necessity for lower costs of production, and said it was a duty of the trade to endeavour to bring about such a reduction. Replying, Alderman Stephen Easten, hon. treasurer of the National Federation, said that while the costs of building were higher than they ought to be, and greater than the trade could stand economically, it was not wholly the fault of the builders. On the other hand, he averred that a large amount of the blame was due to the municipal authorities and the Government, who had insisted on building proceeding under circumstances unfavourable to economic production. For instance, no one would seek to place orders for, say, a number of ships with a yard which had more vessels on the stocks and on order than the makers could cope with. Yet the late Government had insisted on houses being let on contract when there were not men enough in the country to deal with them. The builders fully appreciated that anything which increased the cost of building was detrimental to industry generally. They also recognised that they could only succeed if the general community prospered. Building was one of the last things which people required, for they only built when they had money to spare. That was not quite true of the present situation, which was abnormal, however, and builders did not desire that the municipalities should continue to subsidise the industry. They desired an economic basis of activity.

BRITISH INDUSTRIES FAIR

THE British Industries Fair (Birmingham) which will be opened at Castle Bromwich on February 21, and will remain open until March 4 will be by far the largest industrial exhibition ever held in the provinces. The Birmingham Chamber of Commerce is, as previously, responsible for the organisation and control of the Fair and representative Birmingham and Midland manufacturers serve on the council, and large expenditure has been incurred in enlarging the three exhibition buildings. Approximately the extension is equal to 50 per cent. of the old buildings. The schedule of exhibits is precisely the same as that of last year. General hardware and ironmongery, cabinet work and building construction materials, &c., will be shown in building "A," while in halls "B" and "C" (which will, in reality, be one building, having a length of over 200 yards) will be found the bulk of the heavy engineering and electrical exhibits, as well as stands dealing with metals (ferrous, non-ferrous and alloys). In this building there will be a good deal of power plant and many working exhibits. A new and important feature will be a complete boiler-house and engine-room with turbines and reciprocating sets. The electrical industry will again be responsible for a first-class display of plant and equipment, representing many phases of its diverse activities. Sheffield and Manchester engineering firms will be well represented at the forthcoming Fair.

A luncheon in connection with the exhibition was held recently at the Savoy Hotel, the Government being represented by Sir Philip Cunliffe-Lister, President of the Board of Trade. Mr. Walter Lines presided over a large company.

THE INSTITUTE OF BUILDERS

Licentiate Discussion Club.

THE monthly meeting of the Licentiate Discussion Club of the Institute of Builders was held on January 20, when Dr. W. N. Thomas, M.A., M.Sc., D.Phil., of the Government Building Research Station, Watford, delivered a lecture upon "Tradition in Building," illustrated by a number of excellent lantern slides. The lecturer considered how the effects of tradition could be traced throughout the ages (*a*) in the materials used; (*b*) in the arrangement and planning of buildings, and (*c*) in constructional details and ornaments. The various invasions of foreign tradition into England, *e.g.*, at the Roman invasion, in Norman times, and at the Renaissance, were noted.

The use of brushwood and mud was traced from its most primitive forms, *e.g.*, from the screens used as substitutes for homes by such people as the aborigines of Australia. Its employment was noted in tree huts and wigwams, and finally in conjunction with a heavier timber framework as "wattle and daub." Similarly the use of brickwork in England was briefly summarised, including its use in pre-Roman times, the introduction of the Roman tradition, the failure of the Saxons to carry on the tradition, and the revival in mediæval times largely, but not wholly, due to intercourse with the Low Countries. Other materials such as stone, pisé-de-terre, cob, &c., were likewise dealt with.

As regards planning it was noted how the most primitive form of dwelling—a pit dwelling—was more or less circular in plan, and how this traditional form is found in beehive dwellings, Esquimaux houses, &c. The rectangular plan, a more advanced form, is found in pile dwellings and tree shelters at very early times. A further point was that these early dwellings were "community" shelters. This tradition of a single room had persisted from the pit dwellings until the present day in certain localities. In England, even in Saxon times, the same feature was found; but gradually separate houses were erected for women's quarters, &c., at first detached, then attached, and finally incorporated in the main building with the hall. The importance of the hall in the Middle Ages and its gradual loss in importance was shown. The use of single-roomed houses, often with no opening but the door, and with a central hearth, had persisted until comparatively recent times even in our own country, in the wilder districts. The persistence in the use of a central hearth and the reluctant break away from this tradition was illustrated by references to mediæval literature. In matters of detail and ornament many illustrations were given to show the influence of tradition, *e.g.*, examples showing the influence of the early reed and mud construction in Egypt, the influence of previous timber construction on the stone buildings of Greece and Egypt, and even on our own late Saxon structures (*e.g.*, Earl's Barton Tower).

In concluding his paper the lecturer invited his audience to consider seriously how far tradition influenced our own methods. Examples from modern practice were given to show how in some cases tradition was hampering us and in other cases how attempts were being made to avoid its baneful influence. Tradition might be bad in so far as it hampered progress, but good in so far as it guided evolution along definite lines of advance and promoted team work. We wanted to realise this, and to investigate scientifically traditional materials and traditional methods in order that we might apply intelligently the vast store of knowledge that had been accumulated through the experiences of the past.

Northern Building Trades' Employers.

Mr. J. S. Earnshaw, of Stockton, has been appointed president of the Northern Counties Federation of Building Trades' Employers, in succession to Councillor Wm. Hall, of Gateshead.

CONTRACTS, COMPETITIONS, &c.

For some contracts still open, but not included in this List, see previous issues. Those with an asteri are advertised in this number. Certain conditions beyond those given in the following informati are imposed in some cases, such as that advertisers do not bind themselves to accept the lowest or a tender; that a fair wages clause shall be observed; that no allowance will be made for tenders; a that deposits are returned on receipt of a bona-fide tender unless stated to the contrary.

The date given at the commencement of each paragraph is the latest date when the tender, or the nam of those willing to submit tenders, may be sent in; the name and address at the end is the person from wh or place where quantities, forms of tender, &c., may be obtained.

BUILDING, PAINTING, ELECTRIC LIGHTING, HEATING, etc.

FEBRUARY 7.—**Brynmawr.**—HOUSES.—Ten houses at Park-crescent, Twyncynghordy, for the U.D.C. Surveyor.

FEBRUARY 7.—**Chester.**—PAINTING.—Painting and decorating the interior of St. James' Hospital, Hoole, for the B.G. G. S. N. Hull, clerk, St. Martin's House.

FEBRUARY 7.—**Crowmarsh.**—HOUSES.—Pair of parlour-type houses at North Stoke, Oxon, for the R.D.C. H. B. Barnsley, architect, Knightsbridge Farm, Shirburn, Watlington, near Wallingford. Deposit £3 3s.

FEBRUARY 7.—**Earsdon.**—HOUSES.—Seventy "A" type houses on the Park House estate, for the U.D.C. J. R. MacMillen, surveyor, Council Offices, Shiremoor.

FEBRUARY 7.—**East Grinstead.**—ALTERATIONS AND ADDITIONS.—To the existing offices in the London-road, East Grinstead, for the U.D.C. Cooper & Sons, quantity surveyors, 20, Bridge House, 181, Queen Victoria-street, E.C.4. Deposit £2 2s.

FEBRUARY 7.—**Hove.**—HOUSES.—Erection of 100 small houses at the housing estate at The Knoll, Old Shoreham-road, Hove, for the Borough Council. Borough Surveyor's Office, Town Hall, Hove. Deposit £3 3s.

★FEBRUARY 7.—**Kingston-on-Thames.**—HALL.—Erection of St. John's Church Parish Hall, Hampton Wick, Middlesex, for the Hampton Wick St. John's Church Council. A. Jessop Hardwick, F.R.I.B.A., architect, Eagle Chambers, Eden-street, Kingston-on-Thames. Deposit £1 1s.

FEBRUARY 7.—**Leatherhead.**—HOUSES.—Twenty-six houses at the new housing site in Kingston-road, for the U.D.C. S. R. Drake, surveyor. Deposit £1 1s.

FEBRUARY 7.—**London.**—WORKS AND STORES.—Execution of work and supply of stores (separately) for the United Districts of Brentford and Chiswick, for twelve months commencing April 1, 1927, for the Chiswick U.D.C. Edward Willis, M.I.C.E., Engineer and Surveyor, Town Hall, Chiswick, W.4 (stamped addressed foolscap envelope).

FEBRUARY 7.—**Newcastle-upon-Tyne.**—HEATING.—Extension of the heating system at the Poor Law Institution and Nurses' Home, Westgate-road, for the B.G. G. Walker, Clerk to the Guardians, 127, Pilgrim-street. Deposit 10s. 6d.

FEBRUARY 7.—**Nottingham.**—BATHS.—Baths and Manager's House, Noel-street, for the T.C. T. Wallis Gordon, City Engineer. Deposit £2.

FEBRUARY 7.—**Stockport.**—SHELTER.—Public shelter in artificial stone at the corner of Wellington-road North and Heaton Moor-road, for the T.C. H. Hamer, Borough Surveyor.

FEBRUARY 7.—**Swinton and Pendlebury.**—HOUSES.—182 houses on the Folly-lane site, for the U.D.C. H. Entwisle, engineer and surveyor. Deposit £3.

FEBRUARY 7.—**Thingoe.**—COTTAGES.—Four cottages, in pairs, at Chedburgh, for the R.D.C. A. F. Chamberlayne, clerk, 50, Abbeygate-street, Bury St. Edmunds. Deposit £2 2s.

FEBRUARY 7.—**Ventnor.**—HOUSES.—Six houses on a site at Lowtherville, Upper Ventnor, for the Ventnor U.D.C. Surveyor.

FEBRUARY 7.—**Windsor.**—HOUSES.—Erection of 144 in 28 blocks of four and sixteen blocks of two, for the T.C. E. A. Strickland, Borough Engineer, 16, Alma-road, Windsor.

FEBRUARY 8.—**Armthorpe.**—LIGHTING.—Installation of electric lighting at Armthorpe new school and temporary building, for the West Riding E.C. Education Department, County Hall, Wakefield.

FEBRUARY 8.—**Blackpool.**—ALTERATIONS.—Alterations to the Employment Exchange, &c., Victoria Schools, for the Commissioners of His Majesty's Office of Works. Contracts Branch, King Charles-street, London, S.W.1. Deposit £1 1s. (cheques payable to the Commissioners).

FEBRUARY 8.—**Chesterfield.**—HOUSES.—The erection of 34 A3 type and 16 A2 type houses on the continuation of Tapton View-road on the Highfield Hall estate, and the same number for the continuation of Gloucester-road, for the T.C. Rollinson & Sons, architects, Corporation-street. Deposit £1 1s.

FEBRUARY 8.—**Cork.**—BUILDING.—General store for the Southern Command at Collins Barracks, for the Commissioners of Public Works. T. Cassidy, Secretary Oifig Oibreach Puibli (Office of Public Works), Baile Atha Cliath (Dublin). Deposit £1.

FEBRUARY 8.—**Cowbridge.**—HOUSES.—Fifty houses and for certain works in connection therewith at Red Hill, Llanharry, for the R.D.C. E. Loveluck, A.R.I.B.A., 12, Dunraven-place, Bridgend.

FEBRUARY 8.—**Darfield.**—SCHOOL.—New school for 250 children at Darfield, for the West Riding E.C. Education Department, County Hall, Wakefield.

FEBRUARY 8.—**Ecclesfield.**—SCHOOL.—New school for 300 boys at Ecclesfield High Green, for the West Riding E.C. Education Department, County Hall, Wakefield.

FEBRUARY 8.—**Featherstone.**—LIGHTING.—Improvements to the lighting and ventilation at Featherstone Council schools, for the West Riding E.C. Education Department, County Hall, Wakefield.

FEBRUARY 8.—**Knottingley Holes.**—REBUILDING.—Rebuilding of boundary wall at Knottingley Holes Council school, for the West Riding E.C. Education Department, County Hall, Wakefield.

FEBRUARY 8.—**Near Eastbourne.**—ALTERATIONS AND ADDITIONS.—To the Coastguard Station, Birling Gap, near Eastbourne, for the Commissioners of His Majesty's Office of Works. Contracts Branch, King Charles-street, London, S.W.1. Deposit £1 1s. (cheques payable to the Commissioners).

FEBRUARY 8.—**Newhaven.**—HOUSES.—Forty-one non-parlour type houses, for the U.D.C. C. T. Hoop Town Surveyor. Deposit £2.

FEBRUARY 8.—**Portsmouth.**—GARAGE.—Motor omnibus garage at the tramway depot, Portswood, for the Southampton C.B. Tramways Manager, 161, Above Bar-street, Southampton. Deposit £2 2s.

FEBRUARY 8.—**St. Asaph (Flint).**—HOUSES.—Twelve houses, including drains, sewers, roads and fencing at Dyserth, for the R.D.C. E. O. Evans, Hafod Elwy Deposit £3 3s.

FEBRUARY 8.—**Sheffield.**—PAINTING.—Exterior painting of the woodwork, ironwork, &c., of various buildings at the Nether Edge Hospital, for the B. Chief Engineer and Surveyor, Firvale House.

FEBRUARY 8.—**Stoke and Wolstanton.**—HEATING.—Alterations and additions to the central-heating and hot-water services at the London-road Institution near Newcastle, Staffordshire, for the B.G. Edward Shaw, consulting engineers, Birmingham. Depo £5 5s.

FEBRUARY 8.—**Thorne.**—INSTALLATION.—Providing and fixing of low-pressure hot-water installation Thorne new (boys') school, for the West Riding E. Education Department, County Hall, Wakefield.

FEBRUARY 8.—**Wenlock.**—HOUSES.—Two pairs parlour type houses at Park-lane, Madeley, for the T. G. Riley & Son, architects, Central Chambers, Wellington.

PROPOSED NEW BUILDINGS & OTHER WORKS*

In these lists care is taken to ensure the accuracy of the information given, but it may occasionally happen that, owing to building owners taking the responsibility of commencing work before plans are finally approved by the local authorities, "proposed" works at the time of publication have been actually commenced. Abbreviations: T.C. for Town Council; U.D.C. for Urban District Council; R.D.C. for Rural District Council; E.C. for Education Committee; B.G. for Board of Guardians; B.C. for Borough Council; P.C. for Parish Council; M.H. for Ministry of Health; M.T for Ministry of Transport; C.B. for County Borough; B.E. for Board of Education; M.A.B. for Metropolitan Asylums Board; and M.W.B. for Metropolitan Water Board.

ALTON.—At a meeting of the Cottage Hospital General Committee an important announcement regarding the further enlargement of the hospital was made. Mr. Bond said that Mrs. Summers had asked him to announce that she proposed to buy a strip of garden behind the wards, including the cottage there and the garden round it, and present it to the hospital. The cottage could accommodate four nurses, and would enable them to have three private wards in the hospital. In addition she proposed to turn the old operating theatre into a children's ward to hold four or perhaps five cots. She would furnish the cottage as a nurses' home, and would fit the new ward with all the latest improvements.

BARNET.—Plans for the proposed extension of the nurses' dining room in the hospital have been approved by the B.G. The estimated cost of the extension is £3,900.

BARROW.—The Barrow-on-Soar R.D.C. has received a report from the Housing Committee in regard to the negotiations for the purchase of housing sites at Anstey, for the erection of 20 houses, sites at Rothley for 20 houses, and sites at Mountsorrel and Sileby. At Barrow tenders have been accepted for 20 houses at £8,236 and eight houses at £3,218. An agreement was reached for the erection of 10 houses at Bakehouse-lane, Woodhouse Eaves.

BARROWFORD.—At a meeting of the U.D.C. the following plans were approved: Billiards room, organ chamber, &c., at Holmedale, Wheatley Lane-road, for Mr. A. Jopson; new lavatory accommodation at the "George and Dragon" Hotel, for Messrs. J. Smith's Tadcaster Brewery Co., Barrowford

BEDDINGTON AND WALLINGTON.—The U.D.C. passed:—Elgin-road, four lock-up garages, for Mr. Clark; The New Way, Demesne estate, 14 houses, for Austin & Routledge; Demesne-road, 14 houses, for G. Bland; The Drive, house and garage, for F. B. Bryant; Coldharbour estate off Stafford-road, five houses in one block, fronting road No. 4, for M. Ellard; Tritton-avenue, off Bridges-lane, 16 houses in pairs, for T. E. McCollock; Stafford-road, six houses with shops in one block, near Sandy-lane, for W. H. Harrison, Abbey-road, Abbey Hulton, shop and house premises.

THORNABY.—The Newcastle T.C. has decided to go ahead with a scheme for the erection of a central school at a cost of £15,700.

TODDINGTON.—The plan for the proposed practical subjects centre to be erected at Toddington at an estimated cost of £875 has been submitted to the County E.C. and approved. Subject to the approval of the B.E., the Surveyor has been directed to invite tenders for the erection of the building.

TOLWORTH.—The Surbiton Council has approved the lay-out plan of 47 more houses to be erected on the Tolworth site. The architect (Mr. J. Hill) reported that he had made arrangements with Messrs. Thorogood, who were prepared to enter into a contract with the Council to build the houses for £425 each.

TWICKENHAM.—The B.C. has approved plans as follows: H. L. Moyle, 10 houses, Chudleigh-road; J. S. Deacon, four houses, site of Burley, Cambridge Park; P. Hoffman, 37 houses, Orford-gardens, Orford estate.

WALLSEND.—The E.C. is proposing to erect a new school at Wilington Quay, and a central school in Wallsend

WALSALL.—A scheme for building a dining hall and shelter at the Walsall Children's Summer Camp at Streetly, at a cost of about £1,000, is about to be launched.

WARMFIELD.—Warmfield Bridge, which carries the L.M. & S. Railway over the main road, is to be reconstructed at an estimated cost of £36,720.

WHICKHAM.—The U.D.C. has received sanction from the M.H. to erect another 20 houses on their Swalwell site.

WILLESDEN.—The U.D.C. recommend: (*a*) that flats be erected on the land on the Gibbons estate which has been set aside for housing purposes, and (*b*) that the engineer be authorised to prepare bills of quantities of one block of flats of either two or three stories and that tenders be asked for.—The Clerk is to apply to the M.H. for sanction to a loan of £1,660 for the erection of a public convenience at Willow's Yard, and for a further sanction to a loan of £1,000 for the erection of a similar convenience at Kensal Rise.—The Electrical Engineer has reported that a number of new static sub-stations will be required in the near future and that he had made tentative enquiries with regard to sites at (*a*) the corner of Okehampton and Chamberlayne-roads, and (*b*) in Lydford-road, near Dartmouth-road, and the Council recommend that he be authorised to continue these negotiations.—The Council further recommend (*a*) that, subject to the consent of the B.E., the E.C. purchase the entire piece of land of 12½ acres, and re-sell the surplus of 6½ acres not required for the purpose of an open-air school.—Plans passed: Three houses, "Highridge," "Basildon," "Chelwood," Brondesbury Park, for C. W. B. Simmonds, Ltd.

WINCHESTER.—Extensions are to be carried out to the heating apparatus at the County School for Girls, by the Hants E.C., at a cost of £122.

WINDSOR.—The M.H. has approved the proposal by the T.C. to proceed with the erection of 144 houses on the Dedworth-road site.

WOLVERHAMPTON.—The School Attendance Committee of the E.C. reported that an intimation had been received as to a proposal by the Roman Catholic authorities to establish an elementary school to accommodate 250 children between Heath Town and Low Hill, Bushbury.—The B.E. has agreed in principle to the preparation of detail plans for the completion of the Joint Technical College, which is to cost a further £112,000.

TRADE NEWS

Dutch Industries Fair.

e understand that the Dutch industries to be held at Utrecht from March 15 to will this year for the first time include a on devoted to the building trade. Tiles, s, roofing materials, asbestos, cement s, materials for road building, etc., of h manufacture will be shown.

Heavy-oil Engines.

e have received a copy of the current issue Petter's Monthly News," the journal of srs. Petter's, Limited, of Yeovil, from h we understand that this firm has acd the whole of Messrs. Vickers' interest e Ipswich works. A speciality of produc- of these works is " C " type heavy-oil nes, fitted with a completely cooled com- ion chamber. All sizes up to 2,000 h.p. onstructed.

A Staff Social.

esars. Trollope & Colls, Ltd., held their h united social evening on Saturday, ary 29, at Prince's Hall, Lambeth. There 1,100 employees and friends present, the directors of the firm mingled with all nt, creating a pleasing and cordial relation- There was a concert for about an hour, afterwards dancing for the remainder of evening, the artists and dance orchestra g selected exclusively from employees of the For the success of the evening, credit is hiefly to the committee under the chairman- of Mr. Clifford Trollope.

The Importance of Lift Reliability.

der this heading we have received a book- rom Messrs. Smith, Major and Stevens, , of London and Northampton, dealing the problem of lift service and reliability. firm claim that reliable lift service can be ned with the utmost economy, and a y of the average running and repair costs S.M.S." Electric Lifts would seem to antiate that claim. Amongst other build- fitted with " S.M.S." lifts are Caxton e, S.W.1; Gresham House, E.C.; and algar Buildings; while the installation at Union Cold Storage Co.'s premises at rpool comprises 28 " S.M.S." lifts.

THE SCOTTISH BUILDER

NEW BUILDINGS IN SCOTLAND

Dunfermline.—EXTENSIONS.—In the report for last year, the managers of the Dunfermline and West Fife Hospital outline details of proposed extensions of the hospital buildings. It is proposed to provide two new wards of 21 beds each, an operating theatre, a department for orthopædic and other electrical and X-ray treatment, new laundry and kitchen accommodation, and a heating installation which will be adequate for at least one additional ward of the same size. It is proposed, further, to utilise " Priory House " as a residence for the nurses. The expenditure upon the work, with which it is proposed to proceed immediately, is expected to be not less than £46,000. —POLICE BUILDINGS.—The T.C. has received the approval of the Scottish Office to proceed with the erection of new police buildings upon a site in Carnegie-street.

East Lothian.—BUILDING.—The erection of 200 new houses in the western district of East Lothian was a subject brought before a meeting of the District Committee at Haddington. The Committee finally recommended the erection of the houses, and that provision should be made now for the building of 40 houses—12 at Aberlady, 12 at Gullane, 8 at Longniddry, 4 at Dirleton, and 4 at Macmerry.

Edinburgh.—HOUSES.—Plans passed: Transformer house, Crewe-road, for City; four houses, Thorburn-road, Colinton, for Mr. J. M. Gardner; five double bungalows, Stevenston-road, for Mr. Chas. H. Dunlop.

Falkirk.—BUILDINGS.—At Falkirk Dean of Guild Court, Messrs. W. Alexander & Sons, Ltd., were granted warrant to erect at an estimated cost of £2,800, an omnibus garage, shop and wash-house, in Brown-street, Camelon. Mr. J. G. Callander, architect, Falkirk, has received sanction to erect in Camelon-road a bungalow, estimated to cost £1,000; and the Falkirk and District United Co-operative Society sought and were granted warrant to make alterations at their model dairy and butcher's shop in Bainsford, so as to form meat and milk cold stores, the estimated outlay being £600. Warrants have also been granted to the Falkirk Town Council in respect of three fresh schemes, comprising a total of 276 houses, to be built at an estimated expenditure of £101,000. At Gairloch 122 houses are to be erected in five blocks, each containing four two-apartment houses; 18 blocks, each of four three-apartment dwellings, and 15 double cottages of four rooms each. The Millflats scheme comprises 114 houses and will consist of eight blocks, each of four two-apartment houses; 18 blocks, each containing four three-apartment dwellings, and five double cottages, each of four rooms. At Burnhead-lane 40 houses are to be built.

Glasgow.—SCHOOLS.—A Committee of Glasgow Education Authority has under consideration a minimum of £300,000 as the estimated cost of a school building programme for the city. This involves new buildings and alterations to existing schools.

Inchcolm Abbey.

Inchcolm Abbey, an important and in some respects unique building from an archæological point of view, was described by Mr. J. Wilson Paterson, M.V.O., in a recent lecture to the Glasgow Archæological Society. Since 1924 works of preservation had been carried out under the lecturer's supervision. The investigation which followed the removal of the modern works had traced the development from its foundation in 1123 to the dissolution in the sixteenth century. The first church, erected by Alexander I, was a simple oblong building with a chancel attached. A choir was added at the end of the twelfth century, the tower and chapter house in the thirteenth century, and the present cloister range of buildings in the fourteenth century. The last-named was interesting as being the only cloister range in Scotland with its upper story complete. During the investigation of the church a painted panel was exposed, and found to be a fine example of late thirteenth-century art. This was being carefully preserved.

BUILDING TRADE WAGES IN SCOTLAND.*

THE following are the present rates of wages in the building trade in the principal towns of Scotland. Every endeavour is made to ensure accuracy, but we cannot be responsible for errors that may occur:—

	Masons.	Bricklayers.	Carpenters, Joiners.	Plasterers.	Slaters.	Plumbers.	Painters.	Labourers—Masons', Bricklayers', Plasterers',

LONDON.—The L.C.C. has granted permission to the undermentioned contractors for the erection of the dwellings indicated on the Council's estates to sub-let portions of their contracts :—

East-hill Estate—J. E. Billings & Co., Ltd., superstructures of blocks Nos. 9 & 10; paving and tar macadam work.

Baker's-alley, &c., Scheme—R. Woollaston & Co., Birchfield House, Birchfield-street area; joinery work.

George's-road, &c., Scheme—R. Woollaston & Co., Branston House and Rollit House, Brand-street area; joinery work.

LONDON.—The L.C.C. has accepted the tenders for the following :—

Clapham Common—Conveniences and shelter accommodation: E. Hall, Ltd., £239.

Finsbury Park—Pavilion adjoining the running track: E. Hall, Ltd., £748.

Horniman Gardens—Conveniences: J. & C. Bowyer, Ltd., £604 10s.

Ken Wood—Conveniences: C. H. Boyd & Son, Ltd., £842.

Ravenscourt Park—Enlargement and improvement of the men's conveniences: R. Gibson, £273.

Brockwell Park—Wrought-iron fencing: W. H. Allen, £129 4s. 2d.

Hackney Marsh—Supply and fixing of unclimbable fencing and the coating thereof with bitumastic solution: Bayliss, Jones & Bayliss, Ltd., 8s. 3d. a yard.

Parliament-hill—Renewal in reinforced concrete of the wooden staging at the Highgate bathing pond, &c.: H. Farrow, £379.

Telegraph-hill—Renewal of boundary fencing: Bayliss, Jones & Bayliss, Ltd., £203 17s. 6d.

MANCHESTER.—Laundry at Elsinore-road, Old Trafford, for the Waldorf Toilet Saloons, Ltd. Mr. A. H. Walsingham, architect, 62, Market-street :—

*J. T. Hollinworth & Son, Manchester.
Sub-contract for building work—*The Russell Building and Contracting Co., Manchester.
Floors and asphalting—*F. H. & S. Daniels, Manchester.

MANCHESTER.—Six houses in Moss Side, for Messrs. Tooth Bros. Messrs. Pendleton & Dickinson, architects, 16, Brazenose-street :—

Plumbing—*Mr. Dean, Manchester.

MIDDLESEX.—Constructing the second and fourth sections of the North Circular-road, for the Middlesex C.C. :—

*H. Farrow £81,247

NORTHALLERTON.—Conversion of house in High-street to shop premises, for the Northallerton Co-operative Society, Ltd. Mr. W. Watson, Market-place, engineer :—

Co-operative Society, Stockton-on-Tees	£1,132 19 4
J. Stockdale & Son, North-allerton	1,023 15 0
Moody & Garner, Northallerton	929 12 0
*T. & J. Willoughby, Northaller-ton	851 19 3

PORTSMOUTH.—Garage at Beatrice-road, for Mr. F. J. Currey. Mr. S. E. White, architect, 73, Waverley-road, Southsea :—

F. Corke & Co.....	£438
Tanner Bros.....	423
F. J. Privett.....	400
*John Lay & Co.	349

QUEENSBERRY.—Twenty-two houses at Hastings-avenue :—

*E. Balmforth & Sons.

SHEFFIELD.—Cleansing and painting to engine room, fitters' shops, mess rooms, &c., at Blackburn Meadows power station, for the T.C. Mr. S. E. Fedden, General Manager and Engineer, Commercial-street :—

*Melling Bros., Ltd., Sheffield..... £322

SHEFFIELD.—Transformer sub-station on the Longley housing estate, for the T.C. Mr. S. E. Fedden, General Manager and Engineer, Commercial-street :—
H. C. Hornbuckle, Sheffield.... £987 13 6

SHEFFIELD.—111 houses on the Longley estate, for the T.C. Mr. W. Geo. Davies, City Architect :—
*S. Higton & Sons (30 houses).
*M. J. Gleeson, Ltd. (63 houses).
*C. W. Alflat (18 houses).
(All of Sheffield.)

SHEFFIELD.—Alterations and additions to Ecclesall Union buildings, Nether Edge, for adaptation as boys' secondary school, for the E.C. Mr. W. Geo. Davies, A.R.I.B.A., City Architect :—
*Abbott & Bannister, Ltd., Sheffield.. £6,257

SHIPLEY.—Sixty-eight houses on the Albert-road estate, for the U.D.C. Mr. H. Dawson, surveyor and architect :—
*Paul Rhodes, Ltd., Leeds £27,336

THE BUILDER

JOURNAL FOR THE ARCHITECT AND CONSTRUCTOR.

WITH WHICH IS INCORPORATED "THE BRITISH ARCHITECT."

CXXXII.—No. 4384. FEBRUARY 11, 1927

A SUGGESTED CHANGE IN BUILDING LAW

PROFESSOR REILLY, in the inaugural Bossom lecture which he delivered on February 3 (a report of which we give on p. 238), dealt with some of the methods adopted in America for achieving the immense expedition which has become such a feature of American g activity, and which is regarded with not a little envy miration by building owners in this country. As land increase in London and other big cities the necessity for sing the losses incurred during the unproductive period ding becomes ever more insistent, and although it is y that we shall ever conduct our building operations her on the lines of the United States, owing to traditional mperamental difference of outlook, there is almost certain a continued tendency towards speeding-up.

order that this process of speeding-up be facilitated it is al that the architect be as little harassed as possible, for the most amazing features of the American procedure is mense speed at which the architects prepare their very te drawings, and it must be remembered that it is to awings rather than the specification or bills of quantities he contractor looks for his instructions in America. which to say that everything must be cut and dried, so to speak, outset. The American architect must know not only s expected of him by his employer, but also what the s and regulations will permit him to do. There must be bts, no ambiguities, no delays in obtaining sanctions and sions of whatever nature.

w there is certainly a tendency in London to-day not only ulate, to some extent, American methods, but also to American types of building, and one of the types which ng more and more favour with us is the block of flats, or ent houses, to adopt its transatlantic name, and in ng buildings of this description the English architect is with a very great difficulty from which the American ct is free. The difficulty to which we refer arises from cessity in this country of having water-closets ventilated to the open air, and having at least one external wall; and , from the necessity of having a ventilated lobby between and a habitable room. Now this, on the face of it, may very small matter, but any architect who has attempted nning of large blocks of good-sized flats will know that it he contrary, a very big matter, and one which influences ire lay-out of the plan and greatly increases the problem eving a satisfactory and an economical arrangement. It efore, worth considering whether the imposition of this ion is still necessary in the interests of the public.

the continent of Europe, England, of course, quite otedly leads the way in matters of sanitation and hygiene, r care in matters of this kind is amply justified in the tatistics. France laments her birth-rate. What she lament is her death-rate; particularly her infant death and, we believe, were she to adopt English methods of ion, she would soon note a speedy decline in her mortality cs. Let it not, therefore, be thought that we are unaware value of high standards in this country in matters so affecting the public well-being. But America has d our methods, and it has been admitted that the an standards of sanitation and hygiene generally are as are to be found in any part of the world. Yet America ot insist upon outside ventilation for water-closets in types of buildings.

building laws vary in different cities of the United but in very few of them is an outer wall insisted on for water-closets. We have cursorily examined the laws in some cities of the U.S., and we find these variations: the water-closet may ventilate into a shaft or flue; may not open off a sleeping apartment; must have windows to outer air or to shaft of 40 ft. superficial area; must not open into shaft ventilating habitable room; closet must be a separate room, but may ventilate into same shaft as bedroom. On the other hand, the illustrations of apartment houses which are now appearing in *The Builder* show that where possible the w.c., &c., has one external wall, but in cases where this is not convenient a vent shaft is provided, and the w.c., which is usually placed in the bath room and not separated from it — thus giving a larger area—can be entered direct from a habitable apartment, generally the sleeping chamber, without the intervention of a ventilated lobby. It would appear, therefore, that America is satisfied with arrangements far less onerous than those in operation in this country, and it seems to us that it is one which should, at any rate, receive serious consideration in this country. We do not think it would be advisable to allow facilities for internal closets in every type of building; neither does the same difficulty arise in connection with working-class flats and tenements. Where the unit and also, for the most part, the block itself is very much smaller, the planning of an outside closet is not such a difficult matter. The kind of building we have in mind is the large apartment block, the latest and most up-to-date example of which is to be found in Piccadilly—Devonshire House, in fact. In planning this building we know that the architects were put to considerable difficulty over this very matter. Was it a necessary, an essential, difficulty; essential in the interests of the public at large, or was it due to the insistence upon a law which could be modified without risk?

Let us look at the matter from a different angle—from a philosophic angle. Laws have their basis, for the most part, in a desire to prevent the exploitation of the weak by the strong. Most of the building by-laws exist to prevent landlords building inferior, unhealthy, unsafe houses and letting them to the poorer classes. But the Devonshire House type of building is for a very different class of tenant. The tenants of Devonshire House are well able to protect themselves, and they would be the first to protest, and protest most vehemently, against any arrangement, sanitary or otherwise, which led to any unpleasantness. In fact, if the sanitary arrangements were not absolutely above reproach, in every respect, the apartments would, of course, remain outlet. The Devonshire House tenants—we use this name freely to typify a class of building of which it is the only example in the country—are not in the dire position in which any house, despite its imperfections, is better than no house. They want the best and can insist on having it. And they believe in America that with internal water-closets their flats are still the best.

We suggest, therefore, quite tentatively, that the matter is worth the consideration of local authorities; but whatever decision is come to, let it be absolutely unequivocal. It must not be discretionary. Let it apply to certain buildings only, and those buildings only under certain conditions. But if any advantage is to be obtained towards facilitating and expediting building operations it is the absolute first essential that the architect knows precisely how he stands. He must be able to know at once: this is or this is not a building in which internal closets are permitted. On no account must he have to run round and consult a set of officials to find exactly what he may do. Of course, the real building expedition can only come about when we have a codified set of building laws; but that is a matter which must be reserved for another occasion.

NOTES

Co-operation between Architect and Builder. A CORRESPONDENT who signs himself "Builder" urges the point that the Government should not sanction the building of cottages by small local authorities unless the works are supervised by a competent architect. This very desirable procedure is not so easily brought about, and in many cases it is held, and sometimes rightly, that a council engineer or surveyor is quite competent to act in the capacity of architect. We are all aware that in certain cases this is so, but numberless works have been carried out which prove the contrary, and the legitimate hopes of the profession for appointments they deserve are defeated. We are glad that our correspondent sympathises with our plea for a closer co-operation between architect and builder, but so long as public bodies endeavour to save professional fees by the employment of their own officials, there seems little chance of a better state of things but in the education of our authorities. Any appeal to the Government veto has, we fear, little chance of success.

Steeper Cottage Roofs. REFERRING to the subject of good cottage design, we have received a letter from a correspondent, who asks whether the difference between good and bad design does not often lie in the difference between a high-pitched roof and a low one? He is quite right. The high-pitched roof in Cotswold cottages is largely responsible for their charm. When we get low eaves and a high-pitched roof, we get an effect of a comfortable settling down of the cottage on to its site. Thousands of our modern cottages are spoilt by a high-shouldered and black aspect, owing to the disproportions between walls and roof, and often with a very unhappy disposition of solids and voids. A lower wall surface and a steeper roof would often be found quite as economical a form as could be wished. The extra cost of a steeper roof is not, after all, so very much and might often be counterbalanced by saving on a lower wall.

The Institute Essay Prize. WE are glad to think that "Try Again" is the motto of one who has been disappointed in his efforts to win the Essay Prize. In his letter to us he brings out clearly the difficulties for those who compete; but we would suggest, what we know he will agree with, that whether a writer has literary grace or not, he should not hesitate to tackle any subject on which he thinks he has something of interest to say, and to clothe in the simplest form of English at his command. Directness and simplicity will always command a hearing, and the flourishes of writing are of little moment if the writing be legible, informative, and interesting.

Amendments to R.I.B.A. By-laws. WE note with satisfaction the extended representation which has been conferred upon the societies allied to the Royal Institute of British Architects by amendments to By-law 29 (*c*), as approved by the Privy Council. It may be remembered that the above By-law in its original form provided that the Council of the Institute should comprise, in addition to Fellows, Associates and Licentiates, fifteen representatives of allied societies within the United Kingdom or the Irish Free State. The number is now increased to twenty-two, which is decidedly a step in the right direction.

Shakespeare Memorial Theatre. THE announcement of the competition for the new Shakespeare Memorial Theatre at Stratford-on-Avon reminds us of Mr. C. E. Montague's observation upon the old one which was recently destroyed by fire. We from "Dramatic Values" an which has a particular interest wh observed that the book was first pu in 1910. "Of the Memorial itself—that is, of its outside—char say little. How the vision both form and its colour came to afflict mind, however, as fire from heav not yet smitten it, let not man jud

A Government Telephone Exchange. THE Telephone Exch Clontarf, near Dublin trated this week, unusual interest in as it shows a piece of practical ar ture, carried out by a Gove Department, on exceedingly econ lines, and which yet succeeds in pos an individuality of its own. Na enough it contains possible poi criticism, but one hopes that it ma to introduce the public to "u buildings that do not conform standard of dullness that is unfort the rule. It would be an excellen if Government Departments wou courage their architects to expe more with designs for simple bu They are free from the restrictio often imposed by clients, and even they produce work that is ahead prevailing public taste the public w learn to appreciate the buildings are good.

The Late Professor Gourlay. THE name of the la fessor Charles G B.Sc., F.R.I.B.A., Scot., was well kno our readers, and we are glad to no the Royal Technical College Archit Craftsmen's Society, Glasgow, of he was the founder, decided som ago to erect a memorial to his m The death of Professor Gourlay great loss to the architectural pro and we are not surprised to le reason of the many inquiries r from his past students in many

Detail of Coloured Pulpit, South Burlingham.

Canopy of Rood Screen, Bamfield Church, Suffolk.

Detail of Dado of Rood S Southwold Church.

(*See page* 234)

reat Britain and Ireland, and from iends who had been associated with him, at the desire to participate in any such ovement requires the broadening of the sis of the scheme to include all such pporters, and accordingly an influential mmittee has been set up to complete e scheme. The nucleus of the fund has ready been received, but the Committee sire immediate support to enable the ection of the memorial to be under-ken so that it may be unveiled during e summer. We give further particulars p. 232.

An Empire Academy.

With all the desire to create further facilities for the exhibition of the work of artists and the opportunity which the building of such an academy as proposed presents for fine chitectural treatment, there are yet me doubts left in the mind in regard the arguments adduced, and we must t ignore this side of the matter. We e told "the Royal Academy has to ject 14,000 works of art each year ring to lack of space." We must member that these pictures are not all jected for want of space, but a great mber of them because they do not ach the standard qualifying them for hibition. An Empire Academy built th the object of accommodating these rks might not be altogether in the blic interest. On the other hand, it equally certain that among so many ected contributions a good picture or her work of art will be sometimes rned down. This is more than likely be the case if it is a very good work art. Such cases are, however, rare—d we do not anticipate that an Empire ademy will be less subject to this fect. The opportunities for a certain hnical efficiency in painting at the esent time are very great, and should t be confused with the creation of rks of art, and we feel much of this

ring Buttress at Lady Chapel Altar, Ranworth Church, Norfolk.

House Front, Peterborough.

kind of facility were better absorbed into more productive activity. The problem is, we admit, a difficult one. We desire every opportunity for the artist, but whether such extended facilities as those proposed in the projected Empire Academy will promote the interests of art itself we do not feel at all sure. Is it not encouraging what is best retarded, for in one sense we are already suffering from the multiplication of exhibition facilities? We take it the new Academy would offer artists facilities for exhibition on more possible terms than those sometimes made for renting galleries, and this is very important, as the expense to artists wishing to show their work in public galleries is often prohibitive. The idea of an Empire Academy is a good one, but will require some very careful steering.

The Tomb of Mausolus.

One is inclined to ask whether it was really likely that there would have been a pointed arched opening in the end walls of the tomb of Mausolus (writes a correspondent). "The arched doorway, as seen in the photograph of the model published in the *Times* is hopelessly out of keeping with the general design and makes one doubtful whether the designer of the tomb had this feature in mind. The general view of the tomb is not particularly pleasing, but the arched doorway is a distinctly jarring note."

Travelling Congestion.

One of the latest developments in the problem of congestion has arisen on the L.N.E.R. line between Ilford and London in connection with the immense L.C.C. housing estate at Becontree. The proposal to build a further instalment of more than two thousand houses has elicited letters of protest from the Ilford Council to the Ministers of Health and Transport. It is pointed out that the Traffic Advisory Committee held a public inquiry last March and found that overcrowding then existed in that area; it is further pointed out that the building of a tube would be too expensive. In such cases, where the railways are already taxed to the utmost, it might be desirable to experiment with an adequate service of fast omnibuses that would take passengers, say, from the neighbourhood of Chadwell Heath to the City with at most one or two stops, thus the delay and inconvenience associated with the usual bus and tramway routes might be eliminated.

The Healthy Middle Floor.

The report of a sub-committee of the British Medical Association, dealing with rheumatic heart disease in children, points to some astonishing conclusions. The disease is not prevalent in the slums, neither is damp so powerful a predisposing factor as most people have been inclined to imagine. On the other hand, life in the industrial town seems to favour rheumatism and its incidence in these towns is far greater than it is in the country. But the most remarkable conclusion is that the middle floor is on the average healthier than the top or the bottom floor. This seems to indicate that the even temperature of the middle floors, due to insulation from extremes of heat and cold, keeps up the vitality of the occupants. But it is often found, in problems of this kind, that the answer is of a quite unexpected nature. It is certainly one of the health questions, like tuberculosis, that architects and doctors will have to tackle in co-operation.

Rural Ugliness.

We see that a country firm has been fined recently for exhibiting an advertisement calculated to interfere with the amenities of the district. We are glad to see that public authorities are at last realising that there are æsthetic values quite as important as commercial interests.

Detail of Roof, Cawston Church.

GENERAL NEWS

Professional Announcement.

Mr. Stephen Wilkinson, of Northumberland-avenue, London, consulting architect to the London and North-Eastern Railway, has been appointed Lancashire County Architect, in succession to Mr. Henry Littler, who retired in December.

"An Encyclopædia of English Furniture."

Messrs. Ernest Benn issued last month "An Encyclopædia of English Furniture," edited by Mr. Oliver Brackett, of the Victoria and Albert Museum.

Milton's Cottage.

Milton's cottage at Chalfont St. Giles is undergoing structural alterations with a view to the incorporation of the adjoining dwelling. This is necessitated by the increasing popularity of the museum of Miltonic relics. The work is partly to restore the plaster roof, which discloses the fine oak beams.

Durham Bridges.

The Durham County Works Committee has received a latter from H.M. Office of Works intimating that the Ancient Monuments Board have reported to the Commissioners that Framwellgate Bridge, Durham, Elvet Bridge, Durham, Chester New Bridge, Lambton, and Sunderland Bridge, Croxdale, are monuments, the preservation of which is of national importance, and they have accordingly been included in the official lists for that purpose.

Memorial to the late Professor Charles Gourlay.

A fund has been opened for this memorial, and subscriptions ranging from 2s. 6d. to a maximum of two guineas will be received and acknowledged by the Hon. Treasurer. The Committee in charge of this "Memorial Fund" have had representations made to them that many old students and friends are anxious to give their support. If any such have been overlooked, will they please send their contributions to the Treasurer, Mr. James Rodger, Royal Technical College, George-street, Glasgow?

Dinner to Mr. William Woodward.

To mark their appreciation of Mr. William Woodward's services to the R.I.B.A., and more particularly to the Council Dinner Club, for the last fourteen years, the members of the Club gave a luncheon in his honour at The Trocadero on January 7. The luncheon was attended by over thirty members and past members of the Council, and the opportunity was taken to present Mr. Woodward with an illuminated address signed by the members of the Council Dinner Club. Mr. Woodward was presented with the testimonial by Mr. E. Guy Dawber, the President, and Mr. Woodward briefly replied.

What is an Architect?

The Incorporated Society of Auctioneers, says the *Glasgow Herald*, recently wrote to the Registration Committee of the Royal Institute of British Architects pressing for a fuller definition of the expression "bona-fide architect."

They have received a reply stating that the Institute "consider this to mean a person who has been trained as an architect, and who is engaged in the practice of architecture as his sole, or at any rate his main, means of livelihood. If a person practising as an architect combined with it any other calling which might be considered inconsistent with the usual practice of an architect, they think it would be a matter for the registering authority to decide as to whether or not the applicant was as a matter of fact solely, or at least mainly, in practice as an architect."

The Incorporated Society of Auctioneers state that they consider that if this definition is repeated in the provisions of the proposed Bill it would have the effect of depriving many properly trained architects of part of their livelihood. They point out that an "attempt to legislate against those who combine one calling with another was the very cause of the failure of the Landed Property Practitioners Registration Bill in 1922."

The Foundations of St. Paul's.

We reprint from the *Times* a letter by Mr. J. A. Gotch on this subject, in which he says:—

"In view of the widespread anxiety as to endangering the stability of St. Paul's Cathedral by underground work in its vicinity, it is interesting to know that similar apprehension was felt some 300 years ago in respect of its predecessor, Old St. Paul's, and was allayed in rather summary fashion.

"In the year 1631 a vault was being dug by the parishioners of St. Gregory's against the wall of the Cathedral church and the Lollard's Tower, whereby part of their foundations had been laid bare. Inigo Jones, Surveyor of His Majesty's Works, was instructed to report upon the matter, which he did in the following words on February 25, 1632:—

"'Although I cannot say there is any present danger to the church or tower by digging the said vault, yet in my opinion I hold it not fit that the foundation of so great and noble a work should be underwrought upon any occasion whatsoever.'

"The Privy Council thereupon ordered the parishioners to desist from digging the vault. Further than this, in the following April the Commissioners for Pious Uses, having been informed that there were cellars under certain houses at the west end of the Cathedral, 'which may much prejudice and endanger the foundations of the said church,' Inigo Jones was instructed to take effectual order that the cellars be forthwith substantially and firmly filled up at the charge of the owners.

"The care bestowed upon Old St. Paul's may well be renewed for its magnificent successor."

New Delhi Government Building.

Every description of the new building which is to house the Chamber of Princes, the Council of State, and the Legislative Assembly, must begin, says the *Times*, with the magnificent Central Vista, which is the outstanding feature of the new capital of India. The observer anywhere along the Vista sees one end closed by the grand, ruinous pile of the old Fort built by Humayun in the mid-sixteenth century, and three miles west of the Fort the superb mass of the Secretariat, with a broad road running, between its twin towers and two mighty wings, to the Viceregal Lodge, which stands high on rising ground on the horizon. On both sides of the Vista are wide stretches of turf with three lines of trees and a series of long, shallow water-filled tanks. A few yards north of the Secretariat is the great Council House, or Parliament House, built on a pattern resembling that of the Coliseum. Massive columns encircle the building on the first floor and form a finely proportioned balcony. Due north runs the road towards the Juma Masjid (Great Mosque), which closes the view in that direction. Green lawns and palms around Parliament House add to the beauty of the nobly conceived building. The cost of the Parliament House is £562,500, and its cubic content is 10,900,000 ft.; of the Secretariat, £1,312,500, with cubic content of 25,900,000 ft.; of the Viceregal Lodge, £937,500, with cubic content of 11,200,000 ft., and of the residential scheme, £1,125,000. The net cost of the new capital is about £10,500,000, and of the gardens, parks, and other ornamental places about £375,000. About £9,250,000 have been spent up to the present.

Interesting comparisons with other buildings are the Houses of Parliament, which, in 1840, cost £2,000,000, and would now cost £12,000,000; the London County Council Hall, about £4,250,000, and the new Parliament Buildings and Law Courts for Northern Ireland, about £1,750,000. The average cost of the Delhi Parliament House, Secretariat, and Viceregal Lodge is about 11d. only per cubic foot; the corresponding cost in England now would be about 9s.

COMPETITION NEWS

Modern Furniture Designs Competition.

No prizes were awarded in Section B (Designs for the Complete Furniture for a Drawing-room) and C (Designs for the Complete Furniture for a Sitting Hall).

New Façades, Manchester.

The directors of the tenth Manchester Building Trades Exhibition are promoting a competition for designs for new façades on the north, south and west sides of Albert Square, Manchester and on one side of a new Grand Avenue which it is proposed to lay out. The vista at the upper end of the avenue will be terminated by the Town Hall and at the lower end by Rylands Library. A new line of frontage may be made on the west side of the square, and competitors may close Queen-street and Tasle-alley if they desire to give continuity to the façade facing the square. Elsewhere all existing approaches must be retained, but competitors may suggest improvements in the lines of frontages where these approaches enter the square. The façades of the buildings in the Grand Avenue and the west side of the square to be designed as suitable for shops with showrooms and offices over. The façades of the buildings on north and south sides of the square to be designed as suitable for offices only. The whole of the designs should comply with the by-laws and regulations required by the Manchester Corporation.

The following architects will act as assessors:—Mr. H. S. Fairhurst, F.R.I.B.A.; Professor C. H. Reilly, M.A., F.R.I.B.A.; Professor A. C. Dickie, M.A., A.R.I.B.A.; Mr. Francis Jones, F.R.I.B.A.; and Mr. John Swarbrick, F.R.I.B.A.

A prize of £200 is offered, and may be subdivided, withheld, or part awarded at the discretion of the assessors.

All designs must be addressed "Architectural Competition," Competition Manager (from whom full particulars, together with plan, can be obtained), City Hall, Deansgate, Manchester, and be delivered not later than 1 p.m. on March 26.

COMPETITIONS OPEN.

Students' Union, Glasgow. Competition open to architects in practice in Glasgow. Mr. James Kennedy Hunter, F.R.I.B.A., assessor. Apply not later than January 26 to Mr. Robert Brough, Hon. Sec., Student Welfare Scheme, the University	Particulars published in "Builder" Jan. 14 ..	Sending in date —
New Offices, Wiltshire Working Men's Conservative Benefit Society, Trowbridge. Assessors: Messrs. Cyril A. Farey and Robert Lowry, A. & F.R.I.B.A. Premiums amounting to £250 will be awarded. Apply Chief Secretary, Mr. Henry H. Dyer, Stallard-street, Trowbridge, Wilts. Deposit £1 1s.	Jan. 28. ..	—

EAST ANGLIAN RURAL CHURCHES AND THEIR DECORATION

AT a meeting of the Associates' Section of the Edinburgh Architectural Association held on January 24, a lecture was delivered by Mr. William Davidson, F.R.I.B.A., on "East Anglian Rural Churches and Their Decoration." The chair was occupied by Mr. J. C. Cunningham, president. In opening the lecture, Mr. Davidson stated that in no other part of England, during the Middle Ages, had there been a greater activity in ecclesiastical architecture and decorative and applied art than in East Anglia. Many fine examples of all periods of architecture, from pre-Conquest work, as at Great Dunham, to the Perpendicular rural churches of the fifteenth century, such as Walpole St. Peter, Cawston, Sall, &c., were shown on the screen and described.

The influence of material on design was illustrated by the great prevalence of flint work (no other building material being readily available), built either in the form of concrete walling, or used as a mosaic facework in various colours. The frequent use of round towers was also held to be due to the same cause—the lack of stone for corners and dressings. Of Norman work, the central tower at South Lopham, the arcades at Castle Acre, Walsoken, Binham, Wymondham, Hales and Hadleigh, and the doorways at Thwaite, Aldeby, South Burlingham and Easton were described as fine examples.

The beautiful parish church at West Walton, with its magnificent detached lych gate bell campanile, and the west front at Binham were stated to be as fine Early English detail as any in the country. The stone carving of the nave pier caps at West Walton marked the high-water mark of such work in England. The Pilgrim's Chapel at Houghton-le-dale was given as an exquisite example of decorated work.

In discussing the transition from Decorated to Perpendicular, instances were quoted which, in the lecturer's opinion, proved that these two styles were not aways true to the supposed dates generally given, as it was evident that much of the Decorated work was executed after the birth of the Perpendicular. This mixture of ridged and flowing lines gave the Perpendicular work in East Anglia a freedom and charm not to be found in work of a similar period in other parts of the country. In speaking of the great churches of the fourteenth and fifteenth centuries, the lecturer gave the main dimensions, and the evolution of the parish church plan was described.

In the East Anglian church, the chancel roof was usually lower than that of the nave (Long Melford and Southwold were quoted as notable exceptions), from which it was usually separated by a chancel arch and rood screen, and in some cases a window existed in the east gable of the nave, over the chancel arch. The loftiness of many of these churches, with their high clerestory windows, was shown by examples at Sall, Cawston, Upton and Potter Heigham. Slides were shown of the great towers at Sall, Cawston, Blofield, Tunstead, Wymondham, Lavenham, &c., which in some cases, the lecturer considered, from their unfinished appearance, must have originally had a wood or lead lantern such as we find at East Harling, Swaffham, Aylsham, &c. The walls of some of these towers were 7 ft. thick at the ground level.

Many north and south porches with decorative flint work and carving existed—among others, Worstead, Lavenham, and Kersey being mentioned and shown as good examples. The great wealth of fine fonts and font covers was illustrated by many notable examples. Walsingham, Upton, Hadleigh and Palgrave being specially mentioned; also the font covers of various types, particularly those at Trunch and Sall, which showed traces of the original colours.

A series of slides of single and double hammer-beam roofs were shown. These, said the lecturer, along with the painted rood screens and fonts, were the chief glory of the Eastern Counties. Of the single hammer-beam type, Ludham, Potter Heigham, North Burlingham, Trunch, and Southwold were stated to be among the most beautiful in composition, line, design and detail. The magnificent double hammer-beam roofs at Knapton, and Cawston were illustrated by many detail slides. The evolution in design from the stone vault was traced and the various schemes of roof painting were given in detail. A short account was then given of the famous painted rood screens of Norfolk and Suffolk, and many beautiful examples of figure paintings were illustrated by water-colour drawings and lantern slides, with details of colour treatment of mouldings and floral ornaments. A description of the main colour schemes was given.

Several schools of figure painters were shown to have existed, and the lecturer had no doubt whatever that most of the work was done by English artists, although foreign influences were very marked, notably Flemish, Florentine, German, Persian and Sicilian. There was sufficient documentary evidence in the archives of London and Norwich to prove the existence of a pre-Holbein school of portrait painters in England. The archaic influence of the Byzantine was said to have persisted for a hundred years later in England than in Italy. In speaking of screen and wall paintings, the lecturer expressed the opinion that these did not seem to have been studied in a detailed and comprehensive manner, otherwise the great beauty of many of these fragments would have been pointed out to students of decorative art. The lecturer stated that William Morris undoubtedly drew much of his inspiration from the decorations of these Eastern counties. Many rooms at the National Gallery were devoted to foreign schools of art, but so far this East Anglian school seems to have been entirely overlooked. No one wished to see these paintings removed from their right and original places in the churches, but there were many examples in the hands of private individuals, a few of which could surely be acquired by the nation.

In concluding the lecturer showed and described the work of various crafts, such as stained glass, ironwork, brass and leather work, the fine quality of which illustrated how all the arts arose and developed with that of architecture. The mediæval church in East Anglia, at the height of its splendour, possessed a great architectural and decorative unity, and must have simply glowed with gorgeous colour; tiled floors, frescoed walls, painted screens, painted roofs and stained glass, all blending harmoniously together. In such work we had a great heritage and inspiration, but under existing conditions it was difficult for even the best of our architects to emulate such glorious work.

A vote of thanks was proposed by Dr. Thomas Ross, LL.D., and seconded by Mr. E. J. MacRae, A.R.I.B.A., Edinburgh City Architect. Mr. John Begg, F.R.I.B.A., Mr. J. A. Arnott, F.R.I.B.A., and others took part in the discussion.

International Colonial Town Planning Exhibition in Paris.

A despatch has been received by the Comptroller-General of the Department of Overseas Trade from His Majesty's Embassy in Paris reporting that an International Colonial Town Planning Exhibition, under the patronage of the Ministers of the Colonies, Public Instruction and Foreign Affairs, will be held from May 1 to June 30 next in one of the rooms of the Grand Palais in Paris, which will then be occupied by the Salon. It is understood that the title of the Exhibition will be interpreted in its widest sense, and that the exhibits will include models of monuments or public buildings designed for the Colonies, plans of new towns, designs for garden cities and the like. All inquiries should be addressed to M. Albert Parenty, 10 rue Lavoisier, Paris.

CORRESPONDENCE

[While we are glad to publish letters on professional and other matters of interest to our readers, it must be understood that we do not necessarily endorse the remarks of correspondents, who will oblige us if they will express their views as briefly as possible.]

The Registration Bill.

SIR,—Without going into the question as to whether the registration of architects would be of any value to the public, it is hoped, at least, that the R.I.B.A., in assuming the responsibility of representing the profession for this purpose will not appear antagonistic to architects who are not subscribers to their Institute. From evidence afforded by the Institute's calendar of last year, it appears there are over 2,000 Licentiates; proper architectural training and the serving of articles did not appear to be necessary for admission to that class.

Now, under their proposed Registration Bill these subscribers are styled "Chartered Architects," whilst many architects who have received a proper training and have served the term of articles, but are not subscribers, are to be styled "Registered." It is interesting to note that not 50 per cent. of the Fellowship class of the R.I.B.A. have passed their Institute examination; so, apart from the fact that they are subscribers, they appear to have no right to be presented to the public as "Chartered Architects" to the exclusion of experienced architects, just because they do not happen to be subscribers to the Institute.

It is hoped that the Government will not pass a Registration Bill which is unfair to the profession as a whole, especially as many architectural public servants are not subscribers to the Institute.

JUSTITIA.

The Essay Prize.

SIR,—Now that our elders are lamenting over the non-award of the Essay Prize, and crying woe because only one entrant was intrepid enough to face the poetic, philosophic, satiric, and what-not eyes of the inquisitors, perhaps you will permit a victim, defeated more than once on occasion by the jury, commiserated by the critic, to say a few words.

Under the existing conditions it is essential that the successful essay should have two merits:—

(1) Literary;

(2) Be an original contribution to architectural knowledge.

In the past, with rare exceptions, the essays have not been distinguished for their originality, unless to the few original in matter may be added those original in manner, due to the angle from which the subject has been viewed by their authors.

It appears, then, that the jury have from time to time differing conceptions of the interpretation of the second of the essential merits, and possibly with this discrepancy in mind recent juries are endeavouring to raise the standard meriting the award.

As you pointed out in a recent Note on the subject, there is a certain incompatibility between the two essential requirements, whereas this might prevent the jury making an award of the prize, such contradiction does not seem adequate to account for the scarcity of competitors.

I think the small entry is due to a variety of causes, from which you have selected four. May I suggest others? Quite rightly the choice of a subject rests nowadays with the competitor. But the ability to write upon an original theme calls for other facilities, namely, special knowledge and special opportunity. Moreover, granted such special knowledge or opportunity, every subject so selected does not lend itself equally readily to artistic literary treatment.

The competitors are, in consequence, handicapped by their environment. On the other hand, I may be able to write quite learnedly and not without charm, on "Parish Pumps," yet, although my theme has been approved by the jury, find myself disqualified because

ılting matter is not deemed to be of sufficient hitectural interest.

Vhatsoever theme be selected, the writing an essay of the length usual in the com- ition is an arduous task, but the work is ial in comparison with the time, patience labour involved in accumulating the matter n which it is based. Any possible com- itor who has read, say, a manual like Ch. V. nglois and C. H. Seignobos's "Introduction he Study of History," will think long about, postpone often, any attempt to treat of an orical or biographical theme. And should possess all the qualifications, facilities and ortunity necessary to compete, he will se ere he posts his work, because his pro- ty, the copyright in the successful essay, omes that of the Institute. This clause vents some writers from competing.

t would be encouraging to learn that the y give due weight to the inherent difficulty otherwise in writing upon any theme which been approved by them. I hope that the ze will not be abolished, as I intend to, as ign myself,

TRY AGAIN.

Beauty in Country Cottages.

IR,—An old friend of mine in Surrey once harked that beauty in country cottages depends largely on having a high-pitched gable roof, or hipped roof, and that this costs money. Is not this the reason why so many ugly cottages are built, with low-pitched slate roofs of purple colour resting on red brick walls, the whole resembling a box with a lid? It would be interesting to hear what solution of this difficulty can be offered by those of your readers who possess the technical knowledge of construction which I myself unfortunately lack.

CECIL HALLETT.

Covent Garden Bill.

Chelsea Borough Council has decided to present a petition against the Covent Garden Market Bill, and to ask the M.P. for the borough (Sir Samuel Hoare), to oppose the second reading. The Bill, which seeks power to transfer Covent Garden Market from its present site—where it has existed for 300 years—to the Foundling Hospital site in Bloomsbury, and to raise the rents and tolls levied by the market, is already being opposed by the Westminster City Council, the Holborn and St. Pancras Borough Councils, the Covent Garden Tenants' Association, and by the Foundling Estate Protection Association, which comprises the residents in houses adjacent to the Bloomsbury squares.

THE ROYAL ACADEMY EXHIBITION 1927

SENDING-IN DATES.

THE dates for receiving works at this year's R.A. Summer Exhibition are as follows:—

Water-Colours, Pastels, Miniatures, Black-and-White Drawings, Engravings, and Architectural Drawings: Friday, March 25.

Oil Paintings: Saturday, March 26, and Monday, March 28.

Sculpture: Tuesday, March 29.

Hours for the reception of works: 8 a.m. to 10 p.m., except Saturday, March 26—8 a.m. to 2 p.m.

Not more than three works may be sent by any one artist. No work will be received before or after these dates. All works must be delivered at the Burlington Gardens entrance. Labels and forms can be obtained (during March only) from the Academy. Applications by letter must be addressed to The Secretary, Royal Academy of Arts, Piccadilly, W.1, and be accompanied by a stamped and addressed envelope. The Exhibition will open on Monday, May 2, and close on Saturday, August 6.

AMERICAN APARTMENT HOUSES.—V

By. F. E. BENNETT, A.R.I.B.A.

FIGS. 21 & 22.—TYPICAL PLAN—28 FLATS—VARIOUS, 2, 5, 6 AND 7 ROOMS. City Block, 400 ft. by 200 ft. 14 stories. 277, Park-avenue. Messrs. McKim, Mead & White, architects.

THE site of this block consists of 32 plot units divided in this building into 12 fire units, except in the basement and main floor. Following are some facts relating to the work :—There are 28 flats to a floor; a railway runs underneath the building; the lifts run through to towers on the roof; each apartment has water disconnection from general supply; two-room flats have central refrigeration; there are no dumb waiters; telephones are fixed in service lifts; there is one fireplace to each flat; service, cooks, maids and restaurant are provided by the management.

Criticism.—Kitchenettes are in a bad position facing windows; some bedrooms are not large enough for two beds and furniture; the bathroom is often too small, and tiles have not been carried all round the walls; cupboards and closets are not well shaped, and are too small.

Plans of some of the flats are given, together with a view of the building.

PERSPECTIVE VIEW.

ROMAN FAMILY LIFE

THE lecture by Sir Banister Fletcher, V.-P.R.I.B.A., at the Central School of Arts and Crafts, Wednesday week last, described the Roman Circular Temples, which, he said, were of peculiar interest to the whole Christian world as prototypes of the first Christian baptisteries, just as the Roman Basilicas or courts of justice were probably of the early Christian churches. These were among the many instances in architectural evolution in which Christian forms were based on pagan originals, and they helped us to realise that architectural styles were not divided into watertight compartments, but were evolved one from another, according to the changing needs of civilisation. Of all the circular temples in Rome the little Temple of Vesta had the most attraction for English people, as the symbol of that united family life which the old Romans, like the modern English, regarded as the unit of the state. In its simplicity of plan, with its central altar-fire, it stood in the Forum Romanum at the centre of civic life, as a reminder of the sacredness of the Roman hearth, and its importance was intensified by the consecration of six "vestal virgins" to the service of the goddess. The convent-like building which housed them could still be traced, but of the temple little remained. Other little circular temples there were, most attractive in their plan and treatment—the Temple of Mater Matuta, in the Forum Boarium, the Temple at Tivoli, rising sturdily over the rocky gorge, and that at Baalbek, with its unique external design.

The lecturer then gave an exhaustive account of "the most majestic of all circular buildings in the world," the Pantheon at Rome, with its great expanse of dome open in the centre to the winds. Finally, he described the large halls or "Basilicas" which, while housing courts of justice, served as rendezvous for business and consultation—the "Royal Exchanges," indeed, of ancient Rome.

OBITUARY

Michael Bunney, F.R.I.B.A.

We regret to record the death of Mr. Michael Bunney, F.R.I.B.A., after a few days' illness, at the age of 53. Mr. Bunney's early days were spent in Venice. His father, the late Mr. J. W. Bunney, the artist, was at that time making, with the encouragement of Ruskin, topographical water-colour studies of buildings in Venice and other Italian towns. On leaving Fettes, Michael Bunney was articled to Mr. Horace Field, F.R.I.B.A., and he studied also at the Academy Schools. Before setting up a practice of his own in conjunction with Mr. C. C. Makins, he was for some time Mr. Field's chief assistant. It was at this time that Mr. Field and Mr. Bunney undertook the production of a book of measured drawings and photographs of the small English domestic buildings of the seventeenth and eighteenth centuries, which was published in 1905.

Mr. Bunney had a good deal to do with the development of the Hampstead Garden Suburb and of Gidea Park in Essex. Most of his work consisted of small domestic buildings scattered throughout the country. After the war Mr. Bunney worked for some years at the Housing Department of the Ministry of Health.—(Extracted from the *R.I.B.A. Journal.*]

John Charles Bourne, L.R.I.B.A.

Mr. Bourne, who died recently, was born in 1866, and educated at the Richmond Grammar School, Yorkshire. He then studied at King's College, London, and subsequently became articled to the late J. E. K. Cutts, A.R.I.B.A. Mr. Bourne was for many years an assistant to his uncle, the late Richard M. Roe, F.R.I.B.A., and in 1915 became a partner in the firm. The principal work of the firm was confined to office and business premises in the City of London.

DEVELOPMENTS IN BUILDING METHODS

On Thursday last, at the Royal Society of Arts, Professor C. H. Reilly, F.R.I.B.A., delivered the Inaugural Bossom Lecture of the Chadwick Trust, dealing with recent developments in building methods in the United States. Having given a brief summary of historical methods, he said that the modern system of competitive tendering had led in England to the establishment of the profession of quantity surveyors, who cast up beforehand all the materials and labour required, and made a bill of it which the contractor priced. In America this profession did not exist, yet competitive tenders were obtained. Instead, the architect made much fuller drawings before the building started, showing on these drawings details of such things as plumbing, ventilation, heating, as well as construction. This meant that the architect was forced to think out his scheme more completely. The speaker then quoted from Mr. Bossom as follows, to show how this worked out in practice.

"For large office buildings or apartment houses, and even hotels, and it is in these that America has specialised, once the client has selected his architect it becomes the architect's duty to recommend the economically desirable building. This is a matter of vital importance, for if he should settle on too small a proposition it immediately invites competition by the erection of a similar building near by, possibly reducing the ability to obtain the highest rent, or if he recommends too big a structure much of it will stand vacant for awhile and ruin the investment that way. To hit the bull's eye, so to speak, a thorough analysis is first made of the number of existing available offices of a similar quality, the general progress of their development, that is how the aggregate number of such offices has been added to each year by new buildings and the poorer ones eliminated, and this is judged in relation to the increased population of the community. By charting these two items it is reasonable to suppose that the gap that will be demonstrated is a safe margin to provide for. Then comes the point at which you can increase the rent over the existing market by an educational campaign throughout the community, and by giving better facilities. All of this is quite unarchitectural, but the profit shown has been the cause of America's voracious consumption or adoption of the skyscraper as a national habit, for they are moneymakers of the best character if worked out scientifically and built to meet the correct demand. For instance, the average apartment house will earn anywhere from 12 per cent. upwards. One example I know in Richmond, Virginia, built in 1911, paid 18 per cent. on the investment at the start, and has slowly increased that ever since until to-day it is earning fully 26 per cent. every year.

"Now, the architect having been selected and with his recommendations in the hands of the client, he has to turn those figures into building facts, and the head of the office has the task of laying out his general plan—the arrangements of the offices or apartments or rooms, deciding the type of the building, as to height, according to the zoning law, and the general materials that may be employed so as to bring them within the fixed amount of investment that is allowable. All big architects' offices have a private draughting-room where this is worked out and where there are the real designers who work with the head of the office in turning the scheme into practical shape, and it is then that the work commences at a tremendous speed. With the general sketches all approved, a group of men, either within the architect's own office, or specially employed for the purpose in a structural engineer's office, start laying out the steel frame, which, in spite of all experience, is not yet standardised, as every architect endeavours to make a slight improvement or saving over those previously built. Another group of men start on all the plans, others who only do that type of work start on the elevations. The plumbing men start laying out their plumbing drawings on unfinished or incompleted blue prints of the plans that have been handed to them for their work, as do also the electrical men, heating men, the bells and telephone men. As to the elevators, these are put on the plans by the office, but without exception I should think a firm of elevator specialists is called in for advice or consultation.

"The specification writer is working on his part, collecting his information and in turn giving his information for the notes which have to be placed upon the drawings, and junior draughtsmen are preparing the large sheets of tracing linen, printing on titles, in preparation for the tracing of the completed plans, after they have been fully drawn out. The result of all this is pretty nerve-racking, but it is possible, and has often been done, to complete the entire drawings from the sketch stage to submission to contractors for, say, a twelve or twenty story building (which are the sizes most common to tall buildings) in anywhere from three weeks upwards, six weeks to two months being about the very maximum which would be allowed for buildings of this nature. Owners who have to pay at the rate of 1,000 dollars a day interest are not particularly anxious to have an architect to delay or dream while preparing his drawings. It is this terrific rush that has compelled so much of the old European detail to be incorporated into the buildings.

"When the drawings and specification and form of contract (the latter more or less tentative) have been completed, about half a dozen or more contractors are allowed to submit an estimate, usually on the completed building or upon the building exclusive of what are termed the utilities, which are estimated upon separately. The utilities consist of the elevators, the electrical work, the plumbing, heating work and ventilating work. A number of estimates are invited from a series of contractors along these lines at the same time, and the contractors are usually allowed now more time than they used to be to make these estimates. Years ago it used to be about a week or ten days, now it is more often two or two and a half weeks.

"The general contractor does very little of his own work, except in the case of a few big firms. His own work, if any, is rough brickwork, rough carpentry, general labourer work, and sometimes face brickwork, but all the rest he sub-lets. For this an almost unlimited number of copies of the drawings and specifications are required. All the figures are due in on a certain day, and they do not come in many minutes before the specified hour, so that the contractor's estimating clerk, on the night before the opening of bids, usually spends the entire night compiling his figures and checking up the various sub-contractors' estimates to see that no two men have included the same item or that nothing has been omitted. Then he foots these up, as it is called, or, in other words, adds up all the totals, adds on the office expense, the contractor's own supervision costs, and often then cuts off as much as 10 per cent. and sends that in as his estimate. This sounds, of course, a paradox; but they have found by experience that if they can trade or bargain with their sub-contractors when they actually have the job themselves they can very materially reduce their figure, so much so that they can not only cut out this percentage but yet have a very substantial profit to themselves."

Continuing, Professor Reilly said that in spite of the rushes which occurred occasionally, more time was spent in the study of the building before the final plans were drawn than was usual in England. There were often a number of partners, and they held a competition among themselves. The design was kept in a fluid state as long as possible so as to receive all possible criticisms and embody all good suggestions. The much larger staff of draughtsmen in an American architect's office meant that when the scheme was settled the actual working drawings could not only be made at much greater speed but with much greater detail.

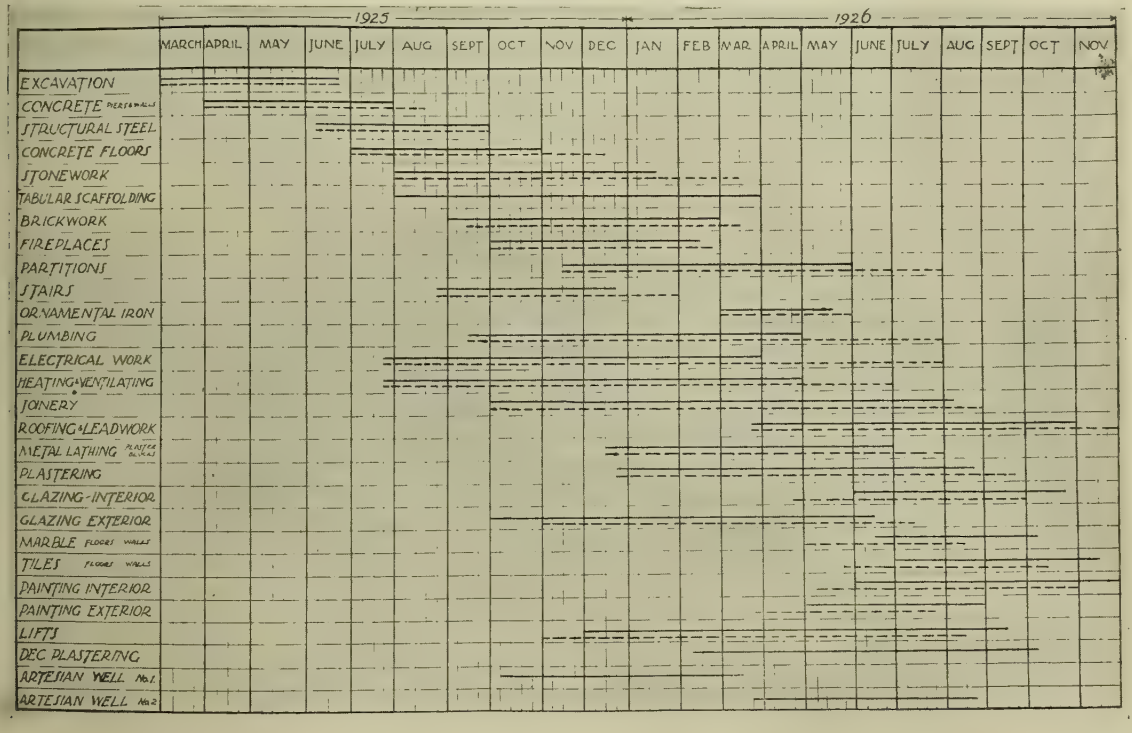
"Coming now to the organisation of the actual building work, the introduction of the steel frame had made possible the application of the Scottish method of building from the inside outwards on a vastly increased scale. Each floor could be completed directly the steel was in place and could become both storehouse of materials and a workshop. As the external walls were carried on, the steel equally with everything else, they could and were built in sections and did not have to rise everywhere at the same time. With the greater heights of building, American builders had to give up the external scaffold and do everything from the inside or from slung boats wound up by winches. These boats were covered in and heated in winter. The plumbing, ventilating shafts and pipes of all kinds went up with the steelwork, which was rendered possible by the very accurate working drawings and careful setting-out on the plans of all such details. The lecturer again quotes Mr. Bossom, as follows:—

"The system is that every sub-contractor has to make a complete set of drawings of his work, giving the complete detail and dimensions of everything that he intends supplying. These have to be checked by the architect to see that everyone fits with every other one, and it is no unusual thing to have as many as 10,000 drawings of various forms and kinds before a job is completed. As to the erection of the steel, the steel columns are always made two stories long, *i.e.*, going up through two floors each time—this being technically known as 'one lift,' and on a swift-moving building it is not at all unusual to lift the derrick, which signifies the completion of two floors, twice a week; in other words, four floors of steel are erected but not fully riveted per week, the riveting gangs following close behind, in very direct connection with the derrick men.

"As to the brickwork. About three floors a week of this, or a floor every two days, is about the best satisfactory speed, for the brick work has to be carried floor by floor on the steelwork; and if greater speed than this is adopted it is found difficult to maintain the proper gauge with the joints of brickwork. As to the floors, we now try to hang our centres for the concrete directly from the steel frame by bolts which afterwards can be pulled out, or by some tin pan or inter-locking tile system, forming a tile arch, so that none of the old methods of supporting one floor concrete from the floor below are employed. The riveting gangs go up at the rate of about four floors a week behind the derrick men, the steel erection, and this indicates how quickly the floors have to be installed."

How were we to adapt these methods to English practice, continued Professor Reilly, if it was desirable that we should? First it was obvious that English work, both from the architects' and the builders' points of view, was much more individual in its character, much less standardised. The architect certainly did not take so much of his detail from the books in his library. It would probably be better in the majority of cases if he were more of a scholar and knew more about his work. But this was no reason why he should not make more complete working drawings, study his building beforehand, in all its aspects and details, as thoroughly as his American colleague. Assuming, however, the architect had done that and produced as perfect a set of drawings as possible, was there anything the builder could do to make his organisation of the job more efficient? It was here, indeed, he thought most could be learnt from America. The best contractors on that side had an excellent system by which they drew up, before the building started, a time schedule or chart showing exactly when all materials were to come on to the site and when each portion of the work was to be finished and each contractor to clear up and go. This chart was a very elaborate thing, going into every de-

Even such apparently small things as the exact dates between which the medicine chests in the bathrooms were to be fixed were given. He had been asked by the Trustees to mention the building of the new Devonshire House because he supposed it was erected so much more quickly than was usual in this country. He thought a year, possibly eighteen months, was saved to the owners by the speed at which the builders, Messrs. Holland & Hannen and Cubitts, worked. This, of course, meant a very large saving in cash, and he attributed it more than anything else to the Progress Schedule which was drawn up by them before the building started. It was made the basis of all sub-contracts, which were let on the understanding that the sub-contractors came on to the job and left it on the days specified, having made all their preparations accordingly. These contract dates were, in general, kept to. They were no doubt assisted by a system of bonuses and fines, but—and this was an important point—they could not have been carried out if the progress schedule had not been skilfully drawn up. Indeed, it seemed to him largely the secret and kernel of the whole matter. The builders in this case, by their great knowledge, gained on both sides of the Atlantic, were able to visualise the building progress beforehand with such detail and accuracy that they neither set an impossible nor too easy a task in each individual trade. The sub-contractors all accepted the schedule, found it reasonable, and worked to it. To facilitate this there were held once a fortnight meetings of all the sub-contractors, at which the schedule was produced and all difficulties, which might cause delays, adjusted. This was a very important part of the work. The builders were able to act like this because for this building they were not contractors in the ordinary sense but building managers, acting in a professional capacity as much as the architects, and paid like them a definite commission. This at once brought the builder on to the side of the architect. He was there to help by his advice and experience and not to make difficulties or to find extras in order to make a profit on his contract. The essence of the matter was that the builder became the architect's friend and adviser as he was in Wren's day and not someone to be watched night and day by a clerk of the works. He understood that there was a much better personal relationship between architects and builders in America than there was with us. Perhaps owing to our system of tendering and the very tight contracts, based on bills of quantities which did not always follow the drawings very closely, because the latter are not full enough, they as architects sometimes put the builders into unfair positions. If, however, the builder could be made into a professional man and paid a definite sum on commission for his skill in organising the work, the whole position was reversed. He (the speaker) was very sure such a change would not only make for better building, which in the end, was more economical building, but, where speed was necessary, very much quicker work.



THE CITY CHURCHES

Mr. Mervyn Macartney, Surveyor to the Fabric of St. Paul's, in a recent lecture on "The City Churches and St. Paul's," dealing first with the Wren churches, said that St. Bride's, Fleet-street, represented pretty well Wren's idea of a parish church. It had been copied by all classes of architects. The Non-conformists had adopted it, and some of the Romanists as well. It was quite the accustomed type for the Church of England. Wren introduced galleries which he, the lecturer, had never thought particularly beautiful, but they carried out what Wren wanted. Wren's idea was that there should be an auditorium which should seat practically 2,000 people. Among the Wren churches which would hold 2,000 people were St. Andrew's, Holborn, St. Andrew-by-the-Wardrobe, St. Peter's, Cornhill, and Christ Church, Newgate-street. Later, Wren reduced the size of his churches considerably, and the Church of St. Nicholas Cole Abbey was a small building compared with St. Bride's. St Peter's, Cornhill, was supposed to be the oldest site in London.

The lecturer said that he was rather annoyed with some City clerics, who had allowed their churches to be damaged and had had them painted and had permitted stained glass windows to be put into them, making them as black as possible. Unless the lights were turned on inside some of these churches it was impossible to see anything. That sort of thing was not at all an improvement. Of the six "dome" churches of Wren, the climax of design was to be found at St. Stephen, Walbrook, one of the most wonderful compositions ever evolved. There was an idea in the minds of some people that these "dome" churches in the City were designed by Wren as a sort of exercise in domes before he started St. Paul's. He, the lecturer, could not think that was the case, because Wren was dealing with quite a different problem. In the churches the columns supported nothing more than lath and plaster, very light, but St. Paul's was not a light thing by any means. It was therefore not much use for Wren to design these churches as an exercise before starting on St. Paul's. Wren was not that sort of man. He would consider weights as being the things to design for, not appearances. One great improvement in the City churches the lecturer said he had noticed. He had visited them recently and had found every one of them open in the mornings except one, the Welsh Church of St. Benet, Queen Victoria-street, where, he supposed, services were held only on Sundays. St. Benet was a very interesting church inside. It was a very small church, but it would be a good deal better without some of its stained glass. A good deal of the woodwork in the Church of St. Nicholas Cole Abbey had been varnished too much; the oak there had become too dark. At St. Martin, Ludgate Hill, they were afraid that the "death watch" beetle had got in, but they must hope for the best. St. Martin had a narrow frontage, and formed a picturesque foil to the dome of St. Paul's. The finest spire was to be found at St. Mary'-le-Bow, but that spire was supposed to be tumbling down. He knew that it was not quite perpendicular. The most graceful steeple that Wren ever designed was at St. Vedast, Foster-lane. He had seen nothing in Italy to come up to it. St. Mary Woolnoth was started by Wren, but was handed over to one of his pupils, Hawksmoor, to finish. In conclusion, Mr. Macartney showed a number of lantern slides of old and new St. Paul's, and pointed out some of the difficulties with which Wren had to contend.

Plymouth Mental Hospital Extension.

Plymouth Town Council has approved a recommendation of the Mental Hospital Visiting Committee for the first instalment of the scheme of extension of the accommodation at Blackadon mental institution at an estimated cost of £149,000.

Progress Schedule of Devonshire House, Piccadilly.

THE SURVEYORS' INSTITUTION

THE GARDEN SQUARES OF LONDON.

MR. FRANK HUNT, C.V.O., F.S.I., read a very interesting paper to this Institution on Monday, his subject being "The Garden Squares of London." There were, said the lecturer, in London about 250 garden squares of the class to which it was proposed particularly to refer. The great majority were called "squares" (though very few were so dimensionally), but amongst them were some "crescents," "gardens," "terraces," etc., which might be regarded as falling within the same category. The residential squares might be regarded as a distinctly British institution, or, perhaps more correctly speaking, a distinctively London institution, for whilst there were examples of such squares abroad, they did not, as in London, form an almost continuous feature of city development over a long period. On turning to the history of London squares, there was a considerable amount of material available. In the first place, they had been the subject of a good deal of legislation, and although resort to private Bill legislation was a much more common practice in past times than it was to-day, it was some indication of the importance of squares in London development that over forty Acts of Parliament had been passed relating to their management and maintenance. In the second place, there were the results of the painstaking researches of more than one local historian on the subject. In the references to the history of the early West End squares it was generally suggested that something earlier might be found in the City, but this was perhaps rather intended as a word of caution on the ground that, as the development of the City came first, it would be likely to contain the first square. On investigation of the point, however, it was found that the old City squares were street squares without garden enclosures, and it was doubtful whether the City was entitled to the distinction of providing the first garden square in London. It appeared that the garden square was a West End institution, a feature which began with the high-class residential development of that part of London. Three squares appeared to have some claim to consideration as the pioneer enterprise of their kind—St. James's-square, Leicester-square, and Bloomsbury-square.

About the same time as Leicester-square, Bloomsbury-square was coming into existence, while a further course of development of London squares followed that of the high-class development of London. Before 1700 a number of additional squares had been laid out, including Soho-square and Golden-square in the Soho neighbourhood, Grosvenor-square in Mayfair, Red Lion-square in the Bloomsbury neighbourhood, and Kensington-square, the latter being an outlying scheme of development.

Between 1700 and 1750, the provision of squares in the Mayfair and Bloomsbury districts continued, including Hanover and Berkeley Squares in the former, and Queen's-square in the latter, and their construction extended farther outwards, namely, to Hoxton-square, Shoreditch, and to Cavendish-square, north of Oxford-street. Between 1750 and 1800 many additional squares came into existence, including Bedford-square in Bloomsbury and Portman and Manchester Squares to the north of Oxford-street, whilst the development of squares in Chelsea appears to have begun in the period with Markham and Marlborough Squares. About 1800 there was exceptional activity in the development of the squares, including squares on the Bedford Estate, Bloomsbury, and in the Camden Town neighbourhood. Between 1800 and 1850 the squares development was at its height, and during this period the Clerkenwell Squares, the Hyde Park and Bayswater Squares, and the Belgravia and Pimlico Squares were formed. By 1850 the development of the most important squares was completed, the last management Act passed in regard to the fresh development of squares being for the improvement of the Norland Estate, North Kensington, in 1843. Cadogan-square, as it at present existed, was not laid out till 1883, and this was no doubt the last of the important squares to be formed.

The preservation of London squares in various forms, continued the lecturer, had been proceeding over a long period. Some gardens had been handed over to the local authorities by public-spirited owners; others had been acquired by local authorities and various bodies or individuals; some were rented or leased by the local authorities; a few had been preserved either as public or private open spaces under the Town Gardens Protection Act, 1863; and by the London Squares and Enclosures (Preservation) Act, 1906, a number of squares were preserved from being used for building purposes. One of the earliest cases of preservation was that of Leicester-square—it might be said appropriately enough—as one of the first squares to be provided in London, and the nearest to Charing Cross, which might be regarded as the point from which the squares development of London proceeded.

Perhaps the most important chapter, however, in the history of the preservation of London squares was that in regard to Edwardes-square, Kensington. This square, on the south side of Earl's-terrace, Kensington-road, comprising about 3.2 acres, was laid out about the year 1819 as part of the development of the estate of Lord Kensington. In the same year an Act (59 Geo. III, cap. cxx) was obtained for paving, cleansing, lighting, watching, watering, planting and otherwise improving the square (and other places on the estate). This Act provided that inhabitants or occupiers of houses for the time being should be appointed trustees for putting the Act into execution, and that the sole power of fencing, embellishing, repairing and maintaining the enclosure within the square should be vested in the trustees. The enclosure or garden was to be kept private for the use and enjoyment of persons occupying houses in the square, and to obtain the necessary funds the trustees were empowered to levy rates on the occupiers of the houses in the square.

In 1851 the Act of 1819 (and other Acts in relation to Kensington-square, Brompton-square, and the Norland Estate) was superseded by the Kensington Improvement Act, which extended and more or less consolidated the local Acts which it repealed.

In 1903 the square, with other property adjoining, was sold. This created such alarm as to its impending destruction that the London County Council introduced a Bill (Edwardes Square Protection Bill, 1904) for the preservation of the square, for which, however, it was not found possible to obtain a second reading. In 1910, when the lease of the square granted by Lord Kensington in 1820 terminated, the question of the future of the square came to be determined. In the Court of Chancery Mr. Justice Warrington held that the Act of 1819 created a modification of the rights of the owner until the statute was repealed, and that the Act of 1851 perpetuated the provisions. He accordingly gave judgment in favour of the Committee (July 26, 1910), and this was upheld by the judgment of the Court of Appeal (November 7, 1910) and the House of Lords (January 22, 1912). This decision was not only of importance as affecting the future of Edwardes-square itself but the future of all squares subject to statutory provisions of the same or a similar character.

In 1905 the London County Council, in view of the great public interest evinced in the question of the preservation of squares which had arisen, particularly in connection with the sale of Edwardes-square in 1903, promoted a Bill designed to prohibit building on the garden squares and enclosures of London. The question was raised as to whether prohibition against building could not be secured on the basis of the payment of compensation, and the view was advanced that it would appear probable that in cases where the square had been so laid out in the ordinary course of estate development that the compensation might be nil. The Bill of 1905 was thrown out by the House of Lords, but a similar Bill was passed in 1906. The efforts for the preservation of London squares, said the lecturer, had not been always successful up to the present, but the process of destruction on any considerable scale had begun only in the years since the war. The real reason for the question arising about this time was due to the fact that on those estates where the squares were found, the original building leases were only now expiring.

The serious threat of the destruction of the squares began with Mornington-crescent and Endsleigh-gardens. Mornington Crescent-gardens formed part of an estate of about 4½ acres consisting of about forty houses and a garden enclosure of about 2½ acres in extent. So long as it remained in the hands of the family of Vice-Chancellor Hall, the garden was maintained as such, and was subject to a garden rate, the last time the rate was levied being in the year 1921-2. The leases of the houses being about to fall in, the trustees of the original owners disposed of their interest, and it passed into the hands of a property speculator who contemplated the development of the garden enclosure for the erection of commercial buildings. There being no effective occupiers of the houses who previously benefited from the maintenance of the garden, the garden rate ceased to be levied after 1922, and steps were taken to dispose of the garden enclosure for the erection of buildings for business purposes. A similar story was associated with the alienation of the Endsleigh-gardens enclosure.

As regards the future of the garden squares of London, it was no doubt true that in the hands of enlightened owners there was little risk of the original intentions of those who were responsible for the first lay-out of the estate being thwarted by the garden enclosures being built over. But the experience in the case of Mornington-crescent, Endsleigh-gardens, Edwardes-square, and more recently in the case of the squares on the Foundling Hospital Estate, indicated that there might be a serious risk of new purchasers not being animated by the same generous desire for preserving the amenities of the district, and attempts might be made to utilise the garden enclosures for purposes for which they were not originally intended. There further emerged a point which was of considerable importance to the owners of interests in, and the occupiers of, the houses around the garden enclosure. The main problem, particularly from a town-planning point of view, was the preservation of the general character of the locality which was impressed upon it in the original scheme of development by the allocation of generous areas to be kept unbuilt upon and had since been laid out as pleasant garden enclosures. That benefit was twofold: one the immediate advantage to the premises adjoining; the other, the wider benefit conferred upon the community as a whole by stamping a district with amenities the value of which it was difficult to assess. In the opinion of the lecturer it was essential, therefore, that for the success of any scheme which would aim at securing from building the garden enclosures in question, it should not be complicated by an attempt to secure that those enclosures should be opened at all times for the use of the public. His own conclusion on the subject was that public opinion and the control exercised by Parliament over the use of property, which every year was limiting for the public weal the freedom of an owner to do just as he wished, had reached a stage when it could hardly be considered unjust to require by statute the general preservation of the *status quo* so far as it related to these garden enclosures.

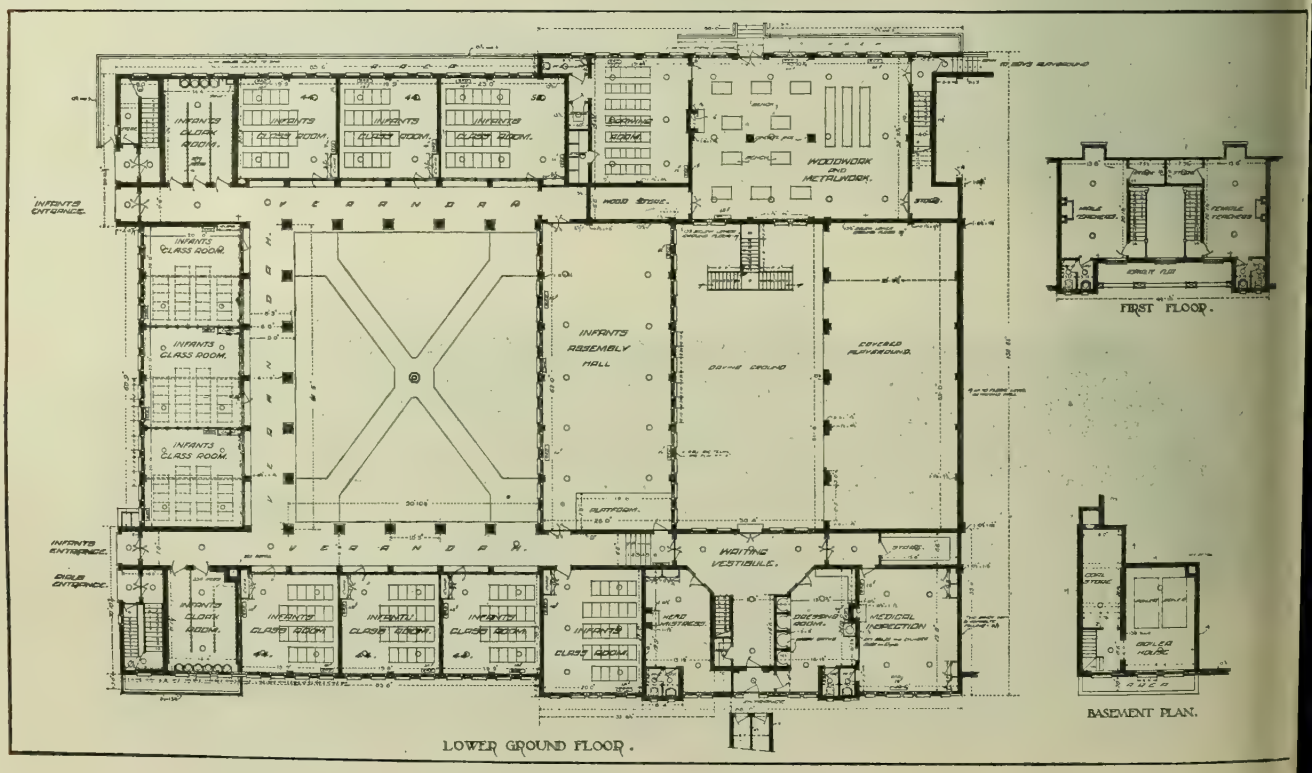
Townhill Elementary School, Swansea.



This school, which is built in the centre of one of the Council's housing schemes consisting of about 1,000 houses, faces south, overlooking the town and Swansea Bay. The area of the school site, which is about 500 ft. above sea-level, is 2½ acres. The playground has an area of 8,200 sq. yds., which is equivalent to 56 sq. ft. per unit of recognised accommodation. The plans, which were approved by the Board of Education in 1924, were prepared by the Borough Architect, Mr. Ernest E. Morgan, A.R.I.B.A., on open-air principles. The school, which provides accommodation for 420 boys, 420 girls and 452 infants in three separate departments, together with special subject rooms for handicrafts and domestic science, has been designed in sympathy with the general character of the surrounding housing scheme. The classrooms have been grouped around two open turfed quadrangles, and have screens opening the whole of their width on to cloisters. The third or central quadrangle with covered drill shed adjoining affords facilities for drill. The boys' department consists of ten classrooms, a large assembly room, together with woodwork, metalwork and drawing rooms. The girls' department consists of ten classrooms, a large assembly room, together with a fully-equipped special subjects department, including cookery room, laundry and model housewifery rooms. These model rooms are duplicates of the rooms provided in the surrounding housing scheme, and are fitted with similar appliances. Folding screens and stage-lighting effects are provided to the laundry and cookery rooms, which enables these rooms in connection with the assembly rooms of the boys' and girls' departments to be adapted as stages for school theatricals and other purposes. The infants' department also consists of ten classrooms a large assembly hall. There is a fu equipped medical inspection department, cluding inspection room, changing room spray baths, common to all three departme The changing room and spray baths have independent entrance, and can be used dressing-rooms in connection with the adja public playing fields. The skeleton fram and reinforced concrete beams and stanchi take all strains and stresses. Exterior curt walls are 11 in. hollow brickwork. The ternal and internal elevations have been signed as simply as possible with a view economy in maintenance, architectural ef being obtained by simple planning, group and colour contrasts. The building is hea on the low-pressure hot-water system w radiators. All rooms, halls, etc., have cr ventilation, and blackboard surfaces have b provided the full length of one wall in e classroom.

The general contractors were Messrs. Ll Bros., of Swansea, and the amount of the c tract was £52,560 (including heating £2,0 electric lighting £967, tar-paved playgrou £2,680). The cost per unit of accommodat was £40 13s. 7d., and cost per cubic 1s 6.4d. The cost of furniture was £2,7 The clerk of the works was Mr. Harry Weav

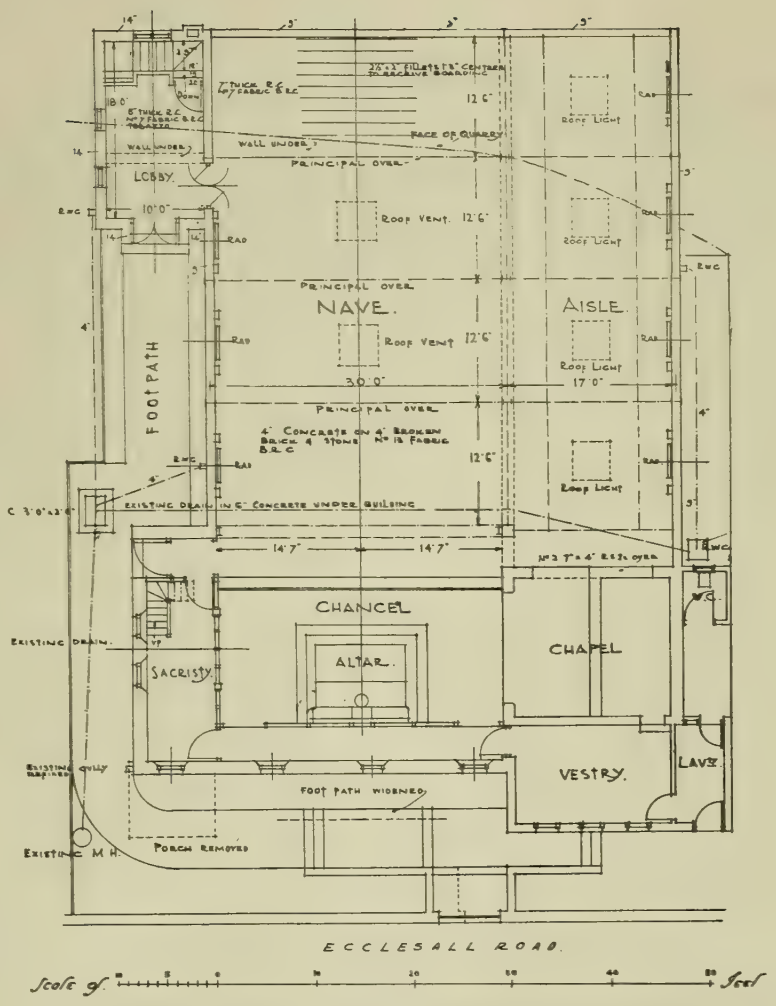
s building has just been completed by ree State Board of Works to the designs r. W. H. Howard Cooke, A.R.I.B.A., ng under the Chief Architect, Mr. T. J. . The four corner pylons are built of ed bricks, and are battered by means of inished cavity reduced from 5in. at the o 1¾in. at the top, the batter being ob-by sloping the side of the plumb bob. atter of the panel reveals of the pylons propriately less than that at the angles. reatment of the concrete sills and the e texture in brick and tile serve to en-the design.



Domestic Work at Imperial Delhi.

se buildings are in all cases constructed in and lime plaster, the living and bedrooms protected from the heat and glare by ooms, dressing-rooms, &c., and by veran-the size of the latter being reduced to the nnm owing to financial stringency. architect is Mr. R. T. Russell, D.S.O., B.A., Chief Architect, Public Works tment.

Parish Church of All Saints, Glossop, Derbyshire.

s church has been rebuilt on the site ctual foundations of its mediæval pre-or, which was destroyed in 1831, and hen and there replaced by a building te of which was a sufficient indication of chitectural character. A survey of the of the parish, written by the Rev. Lawrence in 1916, contains such records ustrations of the original church as were le. The tower and spire, which still , were built in 1853. The removal of based nineteenth-century building, which come necessary owing to its structural rity, was rendered possible by a bequest he late Rev. W. H. L. Rusby for the n of a new nave and aisles, a work was carried out in 1914-15. The cost recently completed chancel was borne cal benefactress, Mrs. Harriet Jackson awshead House, Glossop), in memory deceased husband.

church, as now completed, comprises nd aisles with south porch, of a total ! length of 74 ft. and a width of 48 ft. ancel, 45 ft. by 20 ft., has a morning on the south side and vestries with chamber on the north. The Memorial on the north side covers the site of the chancel aisle known as "St. ne's Chapel." Its western arch has reserved *in situ* and forms the only re-g portion of the mediæval building. lls of the new church are built in local ne, the ashlar work of the nave and being in "Weldon" and that of the in Stancliffe (Darley Dale) stone.

St. William's Mission Church, Ecclesall, Sheffield: Plan.
MESSRS. HADFIELD & CAWKWELL, Architects.

The nave columns are of Glossop (Mouselow) sandstone, and the arches and internal wall linings of Monks Park (Bath) stone.

The contractors for the nave and aisles were Messrs. Robert Bridgeman & Son, of Lichfield; and for the chancel, Messrs. D. O'Neill & Son, Sheffield.

Mr. C. M. Hadfield, F.R.I.B.A., of Sheffield, was the architect.

Mission Church of St. William, Ecclesall, Sheffield.

This is an addition to a small chapel which was built in 1905, and which has been converted into the chancel, side chapel and tribune to a new nave and aisle 56 ft. by 46 ft., planned at right angles thereto, with seating accommodation for 400 persons. This new portion is of steel-framed construction with brick panel walls, the internal lining and casing of the stanchions being carried out in Conisborough "Rustic" brickwork. The walls are panelled to a height of 10 ft. with British Columbia Pine "Drytone" panelling. The tribune and chancel fittings are carried out in the same process and materials. The total cost of the work, including fittings, heating apparatus, etc., was £3,000.

The building contractors were Messrs. D. O'Neill & Son, of Sheffield, and the heating was by Messrs. G. N. Haden & Sons, Ltd., of Manchester. Messrs. Hadfield & Cawkwell, of Sheffield, were the architects.

Sculpture for Australia.

The National Gallery of Victoria, in Melbourne, has acquired, through the Felton Bequest, three bronzes by the late Mr. F. Derwent Wood, which were included in the Memorial Exhibition of his works at the Royal Academy.

MEETINGS

FRIDAY, *February* 11.

Royal Institution of Great Britain.—Mr. E. Lane on "Old Hampton Court Palace Revealed." At 21, Albemarle-street, W.1. 9 p.m.

Town Planning Institute.—Major H. Barnes on "Slum Problems." Caxton Hall. 6 p.m.

The Northern Architectural Association.—Mr. Arnold Mitchell will give an Architectural Talk. 6, Higham-place, Newcastle-upon-Tyne. 7 p.m.

MONDAY, *February* 14.

Institution of Electrical Engineers.—Mr. W. M. Selvey on "Power Stations and their Equipment." At South Wales Institute of Engineers, Cardiff. 7 p.m.

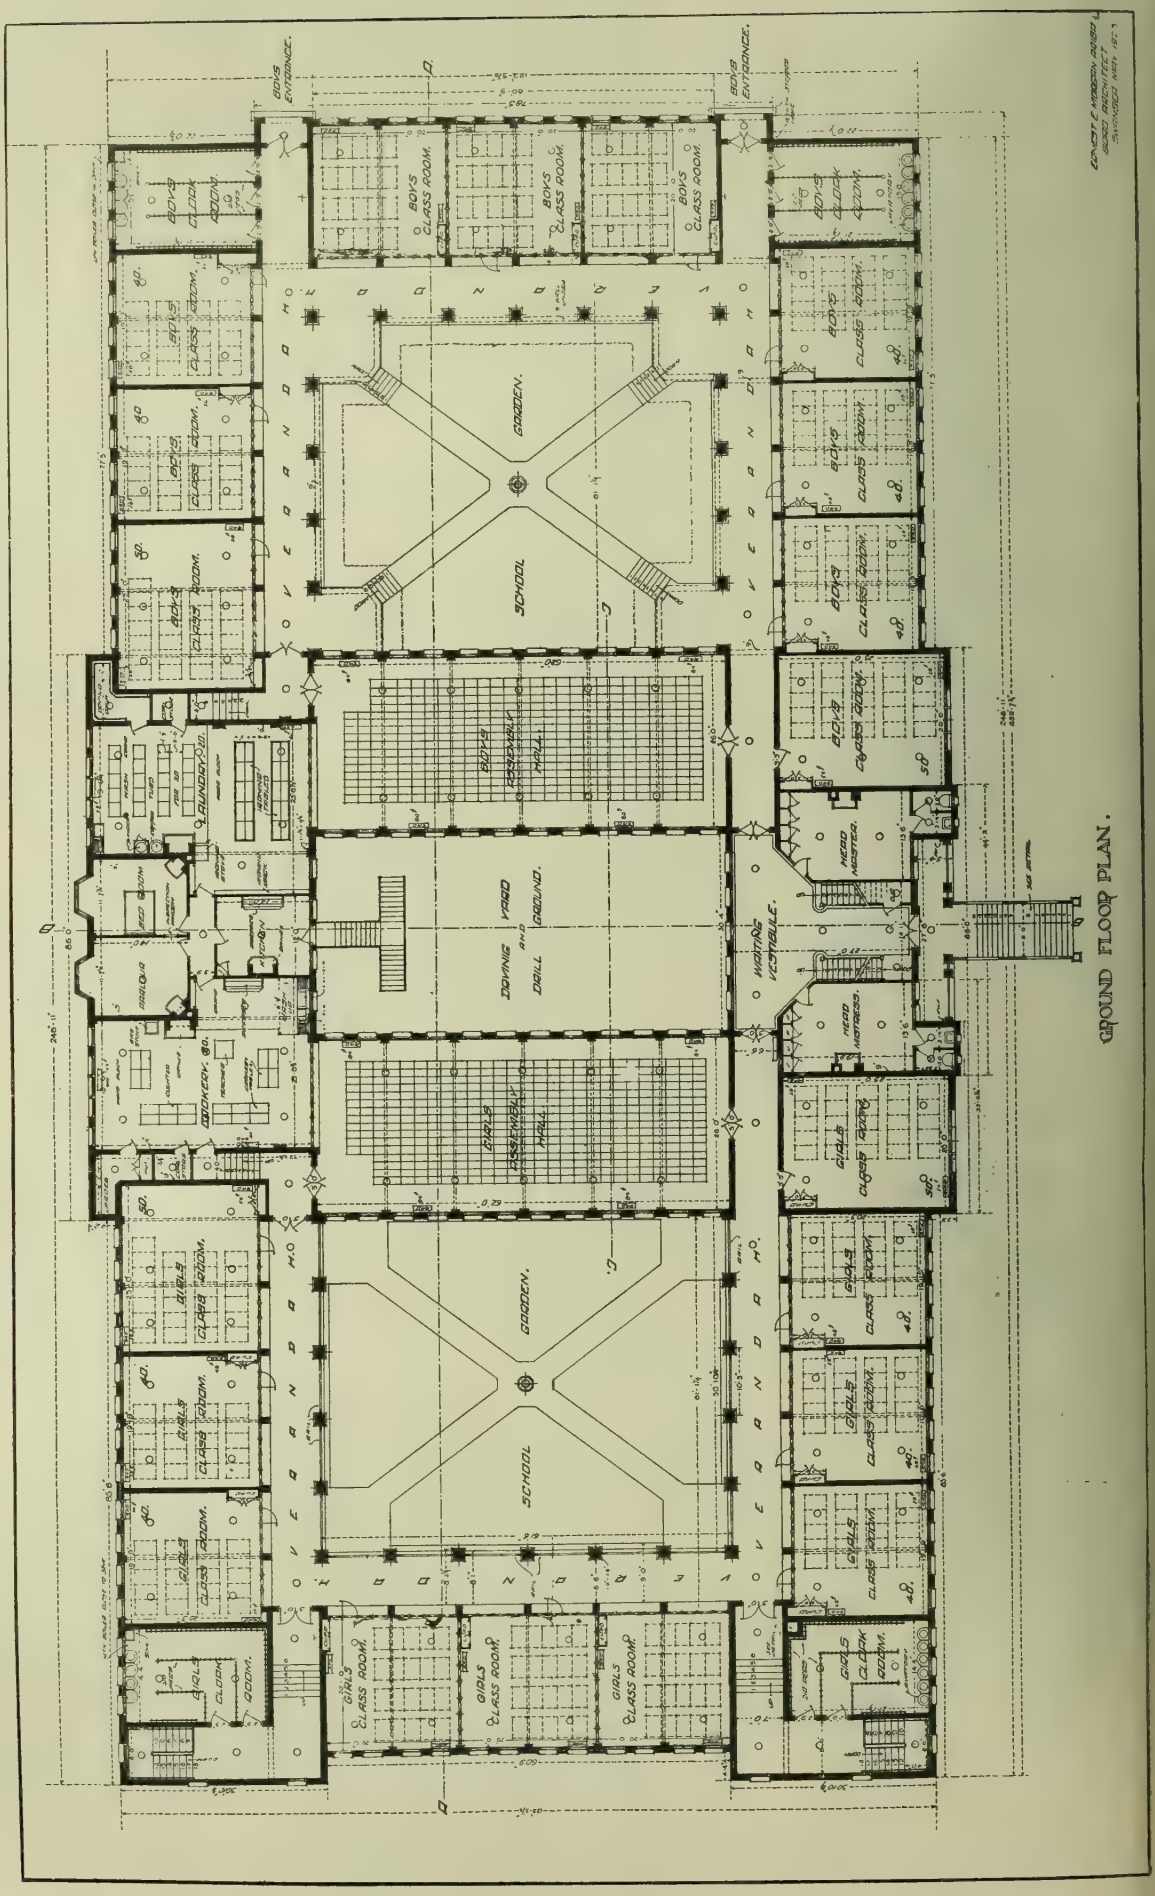
Royal Sanitary Institute.—Mr. J. H. Clarke on "Museum Demonstration—Building Sites." 6 p.m.

Royal Institute of British Architects.—Business General Meeting. Election of Candidates for Membership. Nomination for the Royal Gold Medal, 1927. 8 p.m.

Institution of Structural Engineers.—Mr. H. C. Toy on "Permeability of Concrete." At the Chamber of Commerce, Birmingham. 7 p.m.

WEDNESDAY, *February* 16.

St. Paul's Ecclesiological Society.—Rev. C. R. Davey Briggs on "Church Architecture in Britain from St. Joseph to St. Wilfrid." At 9, Conduit-street, W.1. 8 p.m.



London Society.—Visit to the Hall of the Haberdashers' Company, Gresham-street, E.C.2.

THURSDAY, *February* 17.

Society of Antiquaries.—Mr. P. B. Chatwin on "Decoration of the Beauchamp Chapel, Warwick." 8.30 p.m.

FRIDAY, *February* 18.

Royal Sanitary Institute.—Mr. E. Willis on "House Drainage." 6 p.m.

SOCIETIES AND INSTITUTIONS

LIVERPOOL ARCHITECTURAL SOCIETY.

IN the course of a paper on "Modern American Architecture," given recently before this Society, Mr. Howard Robertson, F.R.I.B.A., S.A.D.G., said that to understand American architecture we must realise conditions of living and of commerce. The country was so vast, with such variations in climate, that there was a place for nearly every type of architecture. But everywhere was big opportunity, which meant that life was strenuous and the chances of reward great. Hence the necessity for conveniences in the more modest home, and the growth of luxury in the case of the wealthy. The high cost of labour, the pressure of existence, meant that mechanical devices replaced human hands. But the art of living, as opposed to merely existing, was not understood in America as it was in Europe. The most noteworthy contribution of America to the world of architecture had been in the solution of its own particular problems—buildings for commerce, for transportation, for dwelling. The problems of every American city were different, but they all had one factor in common—the congestion in the business and favourite residential quarters, with the result that the skyscraper was introduced as a palliative. Therefore, the skyscraper, though specially associated with New York, was a national asset—or liability.

Money-making was the great American pastime and recreation. It was not money-grubbing, but the joy of power and zest for the battle of wits. American commercial buildings, banks, offices, warehouses, were efficiently, even luxuriously designed as a setting for this national occupation. Money largely replaced aristocracy, hence the magnificence of business premises. The banks were temples, as they were beginning to be in this country. The new telephone building at the foot of Manhattan, the Buhl building in Detroit, the Tribune Tower in Chicago, the telephone building in San Francisco, were amongst the finest new business blocks; while the Bush Terminal building and the Woolworth Tower still held their own. Transportation had called into being magnificent terminal stations for the railroads, and these would soon be followed by development of road and garage service for automobiles. The American garages were ahead of any in Europe.

The greatest American contribution to the architecture of the home was the apartment house and apartment hotel. They were the normal outcome of the American mode of living, which, in its turn, was due to shortage of labour, and a natural gregarious tendency. Every conceivable mechanical equipment was installed, and every day new apartments were being opened. The population of the apartment hotels was migratory, the new hotels were always full, and by the time they had lost popularity they could be pulled down, for the investment life of one of these buildings did not exceed eight to ten years. The Shelton Hotel and the Ritz Tower were the finest buildings of that kind in America. The latter was like a fairy tower springing from amongst the square blocks of millionaire apartments in Park-avenue, which had become the wonder street of New York.

Zoning had produced fine silhouettes, and American tall buildings were becoming modern in expression, but lower buildings retained classic flavour. The detail of most American buildings was well placed and in good scale, but it was very dull and trite, being nearly always borrowed direct from some European source. Very little use was made of colour, and the streets were more drab than those of London, due to the neutral tones of brick and the lack of strong colour accents. Interiors were generally based on Spanish, Italian, or French tradition, sometimes English or German. They were often the work of professional decorators, well executed, but lifeless and without character. Interiors of banks, hotels, restaurants, theatres, all resembled one another. Modern decoration was just beginning to be acceptable, but was naturally opposed by those decorators who sold antiques. Gothic architecture was in favour for churches, schools, and suburban apartment houses. The American use of Gothic, with a few exceptions, resulted in the creation of a permanent distaste for anything mediæval!

Labour conditions in the automobile and building industries were very favourable to the worker, but not all industries paid high wages and there was much more poverty than was generally imagined in England. A bricklayer might earn 10 to 15 dollars per day, but would lay 750 or 800 bricks. Building costs for commercial and public work were about the same in New York as in London, and the equipment was more complete. But domestic work was about 10 to 15 per cent. more expensive.

It would be a great mistake to base our architecture on American models, any more than on that of any European country. America's achievement was the solution of her own problems, but she had borrowed largely from Europe in so doing; we must not attempt to borrow back her borrowings. We could learn from America the better organisation of the builder's and the architect's business, the mechanical equipment perfection of all services, and the power and will to do things in a large way. In England we were apt to be petty; even our war memorials had sometimes to tell the hour. We could learn from Americans a broader habit of mind, but we must work out for ourselves our national architectural expression.—(*From the R.I.B.A. "Journal."*)

YORK AND EAST YORKSHIRE ARCHITECTURAL SOCIETY.

Annual Dinner.

The annual dinner of this Society was held for the first time at Hull, last week, when Major Malcolm Dossor (Hull) presided over a large attendance in the Reception Room at the Guildhall. (In previous years, the dinner has been held in York.)

The Rev. Dr. W. H. Rigg (Beverley Minster) proposed the civic toast, and said he regarded himself as the guardian of one of the most beautiful churches in Europe.

The Lord Mayor (Alderman Watson Boyes), in reply, said Hull was ambitious, and he warned Dr. Rigg that in days to come, when the city extended its boundaries, it might look towards Beverley.

Alderman Sir Alfred Gelder, to whom credit had been given for the great improvements made in the centre of Hull, also replied, and said he was pleased of the fact that the improvements had not proved a burden, but rather an advantage to the ratepayers.

Mr. E. Guy Dawber, P.R.I.B.A., said the Allied Societies formed a great network all over the country, and were the base and backbone of the Royal Institute. Theirs was a great profession, with a great past and with a greater future of activity and usefulness before it. But that depended in a great measure upon the support, the loyalty, and the hearty co-operation of all in the work of the Institute. Quite recently they had been able to give representation upon the Council to all the provincial societies. That was a great step for the good of the profession as a whole, because it enabled all their Allied Societies to be in touch with the work of the Institute and made them one great association throughout the country. Architecture was not only one of the oldest arts, but one of the most important and most beneficent. It fulfilled a human need. There was a feeling to-day that if they were to get the best out of life they must have the best architecture. He felt that the country was at last rousing itself to the necessity for placing some control upon the indiscriminate violation of the amenities and upon the ugly buildings that had disgraced this country for the last fifty years, not only in country districts, but in towns and cities. Municipalities were awakening to the fact that it was time to take in hand great schemes of town-planning, and schemes for the clearance of slums that had bee a disgrace to this country for so many year It was gratifying to know that Hull was in th vanguard in that movement. When the thought that for years past theirs had been ou side the scale of the arts, it was a great gratif cation that at last the Press was beginning t realise what an invaluable asset they had i architecture, and the enthusiastic response give to the movement for the Preservation of Rur England augured well for its future. They o the Council had an uphill fight, but he wa sure that if they had not only the support the public, but of architects, they might in tim rouse a volume of public opinion that woul prevent the wholesale destruction and de poliation of the country that was going on to day.

With regard to educational matters, it wa interesting to see that two students from Hu had gained honours recently in London. It wa peculiarly gratifying to him because he wa strongly of opinion, although he himself wa an articled pupil, that the system of educatio adopted in universities and schools was ultimate benefit to architecture and woul justify the abandoning of the old pupilag system. He hoped the authorities at th University College to be established in Hu would see their way to embody a school architecture.

BIRMINGHAM ARCHITECTURAL ASSOCIATION.

THE seventh general meeting of the sessio was held on February 4, at the Association Rooms in the Royal Society of Artists' buildings The President (Mr. Holland W. Hobbis A.R.I.B.A.) occupied the chair. The programm arranged for the evening was an exhibition o the work of students of the Birmingham Scho of Architecture, and the opportunity of a open date was taken to arrange for three shor papers to be read by students of the school The first paper was by Mr. A. W. Soden, a first year man, who chose for his subject, "Wh I Became an Architect." Mr. P. Shelcher, second-year man, entitled his paper, "Th School from the Pupil's Point of View"; whil the third paper was by Mr. G. A. Baker (thir year), who took for his subject, "Holida Work."

A discussion followed, in which many comment were made concerning the old-time method of architectural training as compared wit modern facilities and the results obtained, muc to the detriment of the past era. Amongst th speakers were Messrs. A. J. Swan (Vic President), W. Doubleday, A. T. Butler (Vic President), H. S. Scott, J. P. Bridgewate A. J. Jenson, G. Drysdale (Director of th School), H. Goulborn, and others.

The President announced that an old Birmin ham student (Mr. T. M. Ashford) had won th Pugin Studentship; and Mr. H. Jackson (of th Birmingham School), a Scholarship of th Institute.

The exhibits from the School of Architectu upon the gallery walls, showed a pleasing fres ness both in design and execution, and it w to be noted that there was a good deal dignified restraint and clarity of expressi pervading the works, which reflects cre upon the teachers and students alike.

BRISTOL STRUCTURAL ENGINEERS.

A meeting of the Institution of Structu Engineers was held at the Merchant Ventur Technical College. Mr. F. E. Webber occup the chair, in the absence of the President of branch (Mr. A. J. Taylor). Mr. Gower Pin A.M.Inst.C.E., gave a lecture on "Piles Pile Foundations," in which he traced development of pile-driving on the lines eliminating those resistances which impe driving without assisting the ultimate bea capacity, and augmenting those which wer a more useful kind, illustrating by lantern sl some of the methods by which these obj were achieved.

THE LONDON BUILDING ACTS AND THEIR APPLICATION.—V

By H. V. MILNES EMERSON, A.R.I.B.A.

Note.—Subsection (5).—In the case of Woodham *v.* L.C.C. (1898, 78 L.T. 553) it was held that whether communication between two streets is direct or not is a question of fact and not of law. The Court refused to interfere with the decision of the L.C.C. and the Tribunal of Appeal that a proposed new street with a right angle turn did not reasonably afford direct communication between the two carriageways to which its ends opened.

Subsection (5).—"Subject to conditions," Section 190, Part XVI, of the 1894 Act gives the Council power to make conditions.

Subsection (7).—"It shall be lawful for the Council by order." The order must be given in writing under Section 187 of the 1894 Act, which states :—

(1) Notices, orders and such other documents under this Act shall be in writing, &c.

(2) Orders shall be under the seal of the Council.

In the case of Barlow *v.* St. Mary Abbots, Kensington, (55 L.T. 221) it was held that where an order made by a magistrate to demolish certain property within eight weeks, and such order was not drawn up and served until the last day of the eight weeks, such order was invalid.

An order should be drawn up and served at once.

Section 10.—This section provides for the adaptation of ways for streets and are briefly as follows :—

(1) Application to be made in writing to the Council for their sanction accompanied by plans, sections and particulars.

(2) Council to consent or reject such application within two months. Sanction implied if Council fail to give notice of their disapproval within two months.

(3) As to when a person shall be deemed to have commenced to execute work within the meaning of this section.

(4) Notice to Council before any person commences to widen on either side to a less extent than the prescribed distance.

Note.—In the case of L.C.C. *v.* Heatham (69, J.P. 222), in which a building was enlarged by extending it along a paved way, with gates at end, and to which other persons had access to buildings abutting upon the way, it was held that the owner could not be convicted under sections 7 and 10, as nothing had been done to the way to adapt it for carriage traffic.

Section 11 deals with the grounds for refusing to sanction adaptations of ways for streets.

Section 12.—This section provides for certain cases where greater width of street may be required, as follows :—

In any case where it is intended—

(*a*) To form or lay out any street (not being within two miles of St. Paul's Cathedral) for carriage traffic ;

(*d*) To adapt or permit to be used for carriage traffic any street or way (not being within two miles of St. Paul's Cathedral) not previously so adapted ;

And if the Council shall deem it expedient in the public interest that the street or way should by reason of its length or importance, or in consequence of its forming, or being so situate as to be likely to form part of an important line of communication, or for other sufficient reason be of a greater width of 40ft. clear, they may make it a condition of their sanction that the street or way shall be throughout, or in such part as they may direct, of a greater width than 40 ft. ; but nothing in this section shall authorise the Council to require a greater width than 60 ft.

And before requiring that any street or way shall be wider than 40 ft., the Council shall give notice of their intention to the local authority, in order that the local authority, if they think fit, may make a representation to the Council.

Note.—Section 15 provides for compensation to owners in certain cases.

K.B.D. 1926 (Lord Hewart, C.J., Avory and Salter, L.J.), Courtaulds, Ltd., *v.* City of London Corporation.

Where land is acquired compulsorily by the Corporation of the City of London, under the Metropolitan Paving Act, 1817, for the purpose of street widening, the owners of such land are not entitled to recover, in addition to the value of the land taken, any sum for damage to the land remaining in their possession. (42 L.T. 781.)

Section 13.—Position of new buildings with reference to streets.

(1) No person shall erect any new building or new structure, or any part thereof, or extend any building or structure, or any part thereof, in such manner that any external wall of any such building or structure, or if there be a forecourt or other space between such external wall and the roadway, any part of the external fence or boundary of such forecourt or other space, shall, without the consent of the Council, be in any direction at a distance less than the prescribed distance from the centre of the roadway of any street or way being a highway.

Note.—In the case of L.C.C. *v.* Wandsworth and Putney Gas Co. (82 L.T. 562, 1900), it was held that a gas company who, under provisions of their private Act which entitled them to erect such gas works as they think fit, were subject to the provisions of this section as their private Act contained nothing that was inconsistent to this section.

(2) Gives the Council power to decide what streets shall be over 40 ft. wide.

(3) Provides for appeal against decision of the Council.

(4) The Council may in any case where they think it expedient consent to the erection, formation, or extension of any building, structure, forecourt, or space, at a distance less than the prescribed distance from the centre of the roadway or any other such street or way, and at such distance from the centre of such roadway, and subject to such conditions and terms (if any) as they may think proper to sanction. Provided that the giving of such consent by the Council shall not in any way affect any rights of the owners of adjoining land. Before giving such consent, the Council shall communicate to the local authority their intention to give the same. Any person dissatisfied with the determination of the Council, under this sub-section may appeal to the Tribunal of Appeal.

Note.—In the case of Reg. *v.* L.C.C. (76 L.T. 492, 1897), where a new building or structure has already been erected within the distance without their consent, the Council are not compelled to entertain an application for their consent to such building.

(5) Provided that where any person intends to alter or re-erect a building or structure existing either at the commencement of this Act, or at any time within seven years previously, and which shall not be or shall not have been in conformity with the provisions of this section relating to new buildings and structures, such person may cause to be prepared plans showing the extent of such building or structure . . . and the extent of the forecourt or other open space (if any) between any external wall of such structure and the roadway, and may cause such plans to be submitted to the District Surveyor, who shall (if reasonably satisfied with the evidence of their accuracy) certify the same under his hand, and such certificate shall be taken to be conclusive evidence of the correctness of the plans. Thereupon it shall be lawful for such person to alter or re-erect such building or structure, but so that no land within the prescribed distance shall be occupied by the re-erected building or structure or the forecourt, or such other open space as aforesaid (if any), except that which was occupied within the prescribed distance by the previously existing building structure, forecourt, or open space.

If such person should fail to submit such plans to the District Surveyor, or the District Surveyor or the Tribunal of Appeal should refuse to certify the accuracy of the same, such persons shall, in altering and rebuilding the said building or structure, be bound by the preceding provisions of this section in all respects as though no building or structure had previously existed upon the land within the period aforesaid. Provided always that no dwelling house to be inhabited or adapted to be inhabited by persons of the working class shall, without the consent of the Council, be erected or re-erected within the prescribed distance (a distance of 20 ft. from the centre of the roadway) to a height exceeding the distance of the front or nearest external wall of such building from the opposite side of such street, and that no building or structure shall be converted into such dwelling house within the prescribed distance (a distance of 20 ft. from the centre of the roadway), so as to exceed such height.

Note.—For the words "the prescribed distance," read "a distance of 20 feet from centre of the roadway" when the proviso relates to dwelling houses inhabited or adapted to be inhabited by persons of the working class and situate outside the City. (London Building Act, 1894 (Amendment) Act, 1898, section 4.)

Provided that this section shall not prevent the re-erection of any such dwelling house erected previously to the passing of this Act by a local authority.

Note.—This subsection limits the extent to erect or re-erect or extend buildings within the prescribed distance of the centre of the roadway. The right to build within such distance is dependent upon the existence of a building or structure, or of a portion of a building or structure, within the prescribed distance either at the commencement of this Act, or at some time within seven years previously, and it also limits the right to the alteration or re-erection of a building or structure so as only to occupy land within the prescribed distance which was occupied by the previous building or structure.

It also provides that for the preparation of plans of the existing property, and if certified by the District Surveyor they are accepted as conclusive evidence of the correctness of the plans. This is an important item, and steps should always be taken to have such plans prepared before any work is undertaken. The absence of such plans has often proved in many instances, a loss to parties concerned not only in this section but in light and air cases, &c.

Plans must be to a scale of 22 ft. to the inch, and must show the extent and height of the old buildings on the site.

In the case of L.C.C. *v.* Patman & Fotheringham (1 L.G.R. 519, 1903) it was held that section 13 dealt with the ground area only, that the certified plan is one that will show the extent of the building and forecourt. In this case it was held that a factory could be erected within this subsection although it differed wholly both in height and class from the previously existing buildings (six dwelling houses).

Where a number of buildings had been cleared from a site and a different number of new buildings had been erected on the site, with different boundaries and not of the same class or character as the previous buildings, it was held that such buildings were re-erected within the provision of subsection 5.

It was also held that a public building in the nature of an hotel for poor men is not a dwelling house within the meaning of this subsection. L.C.C. *v.* Davis (77 L.T. 693) and L.C.C. *v.* Rowton Houses, Ltd. (77 L.T. 693).

Upon a site (containing 10 houses and certified by the District Surveyor) 11 houses and shops were erected. Each shop and house was let to one tenant, who occupied the shops and rooms behind same and sublet the upper part to artisans and their families. It was held that the houses were not to be inhabited or adapted to be inhabited by persons of the working class (L.C.C. *v.* Davis, 77 L.T. 693).

The expression "working class" is that class of persons who obviously live in two or three rooms or live in such a condition of life that overcrowding takes place. Where a building is practically certain to be occupied only by persons of the working class that building will come within the description of "to be inhabited or intended to be inhabited by the working class" apart from the intention of the person erecting the building that it should not be occupied by the working class only (Crow *v.* Davis, 89 L.T. 407).

PARTY WALLS: PRACTICE AND DECISIONS

By J. DOUGLAS SCOTT, A.R.I.B.A.

CHAPTER VI.—FEES.

THERE is no recognised scale of fees for services in connection with party walls; they are usually a matter for negotiation. It is customary to assess them on the basis of time and trouble involved, the standing of the surveyor, and the importance of the proposed work. Except in the case of a mutual building of a party wall or a rebuilding resulting out of a dangerous structure notice, when it is usual for each side to pay their own surveyor's costs, it is customary for the building owner to pay the reasonable fees of the adjoining owner's surveyor. This appears just and reasonable where a building owner desires to do some work to a sound party wall for his own use and benefit and the adjoining owner has by statute to employ a surveyor to watch his interests and deal with the technical questions involved. It is only when an adjoining owner's surveyor demands exorbitant fees that friction arises.

One is unfortunately acquainted with instances where the amount of the fees demanded can only be described as blackmail, but which the adjoining owner's surveyor will sometimes endeavour to justify by producing more or less elaborate drawings, often showing matters that have no connection with the construction of the party wall, together with a list of imaginary visits, interviews, and letters that he claims will be necessary in order to see that the work is properly carried out. After the receipt of his fees I have noticed that the necessity for these services on behalf of his client, the adjoining owner, appears to diminish—even to disappear altogether. Such practices should be discountenanced, and only a reasonable fee should be offered for services in settling the award, and the adjoining owner's surveyor should be told that he must look to his client for such further fees as he requires. If this is made an excuse for holding up the settlement of the award, as is sometimes done, no time should be lost in calling upon the third surveyor to act, after, perhaps, pointing out that the only reference to the subject in the Act is in section 91 (4) which says, "the costs incurred in making or obtaining the award shall be paid by such party as the surveyor or surveyors determine." A third surveyor who knows his duties is not likely to support exorbitant claims for fees.

It is sometimes stated in the award that the fees therein mentioned are a contribution towards the fees of the adjoining owner's surveyor which enables him to approach his client with better reason for such further fees as he requires. One is often met by a claim for fees for the adjoining owner's solicitor, for instructing the surveyor and other services. It is the custom in London to refuse to pay these, and not to recognise any intervention of a solicitor, as the London Building Act was specially framed to enable neighbouring owners to settle their differences through the agency of their surveyors. In the country the same reasons do not apply, and the reasonable charges of a solicitor might well be allowed for such nominal services. The fees mentioned in the award are paid upon signing it, and the award is usually so worded as to make this obligatory. The adjoining owner's surveyor would be justified in not completing the award until he has received his fees as agreed.

Instances sometimes occur where for some reason an adjoining owner's surveyor desires to retire from the position after an award is made but before the agreed work is completed or even commenced. His ability to do so will depend upon the terms of the award, and especially upon the clause relating to his fees as, if the fees are stated to be those of the adjoining owner's surveyor, I think it is doubtful if he would be able to throw up his retainer until the work is completed without becoming liable to his client for damages. Even if he found someone else to undertake the duties and paid him he would still find himself in a difficulty as, being in the position of an arbitrator, he cannot delegate his authority or duty. The position would, I think, be different if the award stated that the fees were assessed up to and including the signing of the award, and this would conform to the wording of the section of the Act previously quoted, but in any case it would be safer for a surveyor who desires to retire from the position first to obtain his client's sanction thereto.

In the case of party walls outside the jurisdiction of the London Building Act, the same principles as to fees can be safely followed, and where the surveyors are authorised by the respective owners to draw up an award under a voluntary submission. I would strongly advocate that both the building and adjoining owner's surveyors' fees should always be stated in the award.

Presentation by Thomas Hardy.

Mr. Thomas Hardy has presented to the Dorset County Museum at Dorchester, of which he is a vice-president, a Roman jug found during excavations at his residence at Max Gate. When discovered some three feet beneath the surface, lying close to a skeleton and remnants of ancient Roman pottery, the jug was crushed, but has been carefully restored.

Elementary School, Townhill, Swansea. The Spray Baths (Medical Inspection). (*See page* 242.)

ARCHITECTS' & BUILDERS' INQUIRY BUREAU

We are glad to give questions and answers, but cannot accept responsibility for contributed replies, especially on legal matters.

May we appeal to our correspondents to submit their queries on paper of a size easily filed, and written as legibly as possible, or, better still, in typewriting?—ED.

Profit Sharing Scheme.

[REPLY TO "PROFIT SHARER," JANUARY 21.]

SIR,—I quite agree with "Doubtful"; difficulties no doubt there are, and the point he mentions is one of them. Is it necessary for foremen to be Union men? My experience is that some are and some are not; a good many in the past have joined for peace and quietness, as they put it; those that are members usually take little, if any, active part in their branch meetings. To my mind no foreman should be a Trade Unionist—he cannot faithfully serve two masters. In London, I believe, there is a Foremen's Association which would overcome your correspondent's difficulty.

In the district to which I belong the foremen usually have been with their employers for many years, and invariably their sons follow in like capacity; what happens is this:—A contract is secured, usually at a cut figure (it is astonishing even to-day, with the increased amount of building, how much estimates are "cut up"). One says to the foreman, "Look here, Jack, I have got the job low. It is up to you to watch my interests" (without detriment to workmanship generally), "and if the job comes out all right I will give you something at the finish." The fact that he may possibly draw, say, a five-pound note at the finish is an incentive to an added interest in carrying out the work economically, and whether or not he is a Union man it has been found that he is always ready to accept the gift—a form of profit sharing.

Recently the annual meeting of a well-known firm was reported in your columns, and, if I remember rightly, reference was there made to a profit-sharing scheme which had been inaugurated and was working satisfactorily. PROFIT SHARER.

Cold Bitumen Preparations.

SIR,—If any of your readers have had experi ence in these materials for paving purposes an for road surfacing, I should be interested to hea their experiences. I have recently tried on make without very great success. PAVIOR.

Transparent Sheet Material.

SIR,—I require some transparent shee material (oil preparation or otherwise) to cove some stalls in a covered market hall. The ligh must go through, but no dust nor occasiona drops of rain, owing to defective roof. Can yo suggest a maker of or dealer in such material A. G. H.

Sawn Laths.

SIR,—As timber merchants, we are puzzled a the varying nature of the demands for saw laths; sometimes there is a tremendous run o 3½ ft., sometimes on 4 ft. Can any of yo readers account for these variations?

W. R. C.

Damp Walls.

SIR,—In altering and re-conditioning a buil ing about 78 ft. by 40 ft. which has eighte 1 ft. 10½ in. by 2 ft. 3 in. piers at interva around its external walls, it is found that dan is rising seriously owing to absence of dam course. Is it feasible to insert a dampcou having regard to the size of the piers? If what would be the approximate cost, and wh material and method could be recommende What other method of treating the walls or casing them internally could any of your read advise? Between piers the walls are about 1 13½ in. and half 9 in. in thickness.

ANXIOUS YOUNG ARCHITECT

Cost of Building Work.

SIR,—In ascertaining the approximate cos industrial office buildings by the "cub content" method, what percentage should added to the pre-war figure per cube foot obtain the present-day figure or cost?

ESTIMATOR

THE BUILDING TRADE

BY-LAWS RELATING TO BUILDINGS AND STREETS.—VI

Keeping By-laws Up to Date.

In our last article we were still considering e recommendations of the Committee on uilding By-laws as to the method to be lopted for bringing by-laws up to date, and hen once they were up to date, of preventing em from falling back again, and we had own that the Committee had rejected a sug-stion that the builder should be given the tion to follow the model series instead of the ries in force in the district and their reasons r so doing. But as the Committee had found atures which were attractive in this sug-stion, and also one referred to later in the eport that a single code should be enforced all districts, subject to necessary local varia-ons, we had put forward a variant of both ie above suggestions, viz., that the model eries appropriate to each district should be ut in force, but the local authority should be llowed to show cause for any local variation, nd we were about to show that this sugges-on would meet many of the objections raised y the Committee against the two proposals s made before them.

In addition to the objections urged against ie proposal to give the builder an option to bserve the model, instead of the by-laws in orce in his district, which we set out in our ast article, the Committee added (see para-raph 34 of the Report): "Moreover, the sug-estion involves giving the model form statu-ory force, presumably in the shape of an rder of the Ministry of Health, which would ead to difficulties, as explained in para-raph 26 of this Report. We have, herefore, attractive as this plan is at irst sight, decided to reject it." We nave already referred to paragraph 26 of he Report at the close of our fourth article, ut it is to be observed that the suggestion he Committee was there dealing with was, hat by-laws should be dispensed with and a tatutory order should take their place; and he Committee found: "We cannot on the vidence before us say that uniformity is ecessary, although, as stated in paragraph 28, ve think it should, as far as possible, be ought, and we cannot therefore recommend hat the system set up in 1858 of distinctly ocal and possible varying legislation in the hape of by-laws should be superseded in avour of centralised legislation in the shape f Orders of a Government Department; rocedure which would be better adapted for ie purpose than Parliamentary legislation, ut which would involve much time, labour nd negotiation with conflicting interests.' ne proposal we have made is not at all on l fours with the suggestion the Committee ere there considering, it does not dispense ith by-laws and substitute orders of the inistry for them, and the only order required ould be one putting the three model series force in the districts for which they are ppropriate. When we turn to the recom-endations of the Committee directed to curing that every district shall have at least minimum code of by-laws, we find support r this procedure, for we find it stated in ragraph 109 of the Report: "We do not ink any appreciable number of local authori-s would refuse to carry out a statutory rection that by-laws should be made; but ere might be some cases of default, and we ggest that these should be met by giving e Board power to declare by order that rtain by-laws should come into force and te effect as if made by the authority. There a precedent for the form of this in section 44 the Housing Town-Planning Act, 1909."

We therefore think that our suggestion ets all the objections raised in the Report the two suggestions on this point made to Committee. The model by-laws could be put in force, by order, in the appropriate districts; by-laws would not be superseded by the Order, nor would centralised legislation be substituted for local legislation, for opportunity would be given for the local authorities to show cause for any variation required by local circumstances; the suggestion does not involve two sets of by-laws being in force in the same district, and it would not tend to lax administration on the part of the authorities, nor cause friction, nor would it cause the trouble anticipated by the Committee in connection with the proposals before them with one standard only, for with the application of the three models respectively in the appropriate districts applications for variation would be the exception and not the rule, and that uniformity which the Committee admitted was desirable both in the interests of all concerned and as securing certainty of interpretation would be secured; and, we may also add, the suggestion would appear to fit in with and support the other two recommendations made by the Committee.

This brings us to the third suggestion made to the Committee—the automatic sweeping away of all by-laws on a certain date or dates—and the Committee recommended that by a statutory provision a date should be fixed and that all by-laws confirmed before that date should cease to have effect; that other by-laws in existence should be terminable at some future date; and that any by-laws confirmed hereafter should only run for a period of years. The dates suggested by the Committee were that all by-laws confirmed before the year 1901 should be swept away as soon as possible, and those confirmed in the years 1901 to 1910 (inclusive) at a slightly later date. From 1910 onwards it was suggested the life of by-laws should be ten years. Seeing the time which has elapsed since the publication of the Report, these dates would require a little re-adjustment.

It was pointed out by the Committee that the repeal of by-laws by this method would not mean that any change in the by-laws must necessarily be made, as it only involved re-submission for confirmation with a renewed compliance with section 184 of the Public Health Act, 1875, and the same by-laws might be submitted for confirmation; but the Committee considered that there would be a natural tendency to approximate more to the model series, and thus "a national code" would grow up. We venture to think that the suggestion we have made would much facilitate this process, for if the model codes appropriate to each district were in force to begin with, on every future confirmation it would only be the exception for local authorities to require variations to meet local circumstances, and the work entailed on both the staff of the Ministry and the staffs of local authorities, which the Committee allude to in connection with their scheme for calling in by-laws, would be lessened rather than increased. In any case, the two recommendations of the Committee referred to in this article and article V—the power to revoke by-laws and the fixing of a term to their existence—are of the first importance and would do much to secure the objects aimed at, the extinction of obsolete by-laws and the keeping of by-laws up to date; but it may here be noticed that the amendment of section 44 of the Housing Act, 1909, now contained in section 101 of the Housing Act, 1925, does not go far enough to accomplish all the objects desired by the Committee, for it only applies where the erection of buildings can be shown to be "unreasonably impeded," and not to by-laws unreasonable in other respects.

The Committee, after the above recommendations, went on to consider how certain grievances could be mitigated which occur even when by-laws are kept thoroughly up to date, and the Report points out that one cause which has occasioned a good deal of trouble in the past has been that a person proposing to erect a building or to lay out a new street has no practical means of obtaining in advance a binding decision whether or not it will comply with the law, or even a definite statement from the local authority of the respect in which they consider it does not comply with the by-laws.

Reasons for Disapproving Plans to be Given.

The first instance the Committee gave was that even if the local authority pass a plan this gives no assurance, for if it should turn out that the proposals are in reality illegal the passing of the plan by the local authority has no effect. In this connection the Committee referred to the case, Yabbicom *v.* King (1899, 1 Q.B. 444). That case was somewhat unusual in its facts. On June 12, 1896, the Urban District Council of St. George, in the County of Gloucester, had approved plans for a house which was erected at a date subsequent to October 31, 1897. Before this latter date the district of St. George, by a private Act, had become part of the City and County of Bristol, and the Act annulled all by-laws in added areas from the time it came into force, but provided that all plans approved before that date by the urban councils should be valid for a period of two years. The plans as approved infringed the by-laws of St. George's district as well as those of the Bristol Improvement Act, and the builder was summoned by the Bristol Corporation. The Court held that in the present case the Bristol Corporation was not seeking to enforce any power not possessed by the St. George's District Council, and the proviso in the Act of 1897, validating plans for the period of two years, only applied to plans *lawfully approved*, but in this case the St. George's Council had dispensed with their own by-law, a power they did not possess (McIntosh *v.* Pontypridd Improvements Company (1891), 61 L.J., Q.B. 164), and the approval was illegal. It is obvious that to have held otherwise would have been tantamount to permitting the local authority to exercise a discretion in the administration of its by-laws, and the Committee itself was strongly averse to discretionary powers except in certain special cases, to which we shall refer later, and it may be doubted whether any of the recommendations we shall next refer to would obviate a manifestly improper decision from being set aside, though they may limit the risk of such cases occurring.
